It is estimated that about 150,000 acres will be planted in 1919.

#### TEXTILE FIBERS.

California can grow all the fiber plants except such as are purely tropical.

California has done much in an endeavor to promote useful developments of its large and varied resources. On April 25, 1862, an act (Chapter 302) was approved for the encouragement of agriculture and manufacturers, and offering premiums for the production of flax, hemp, cotton, silk, sugar, molasses, rice, tea, coffee, beer, linseed oil, and other articles.

#### JUTE AND RAMIE.

The attempts thus far made at cultivating ramie in California have been discouraging, the plant being liable to suffer from frost, and yielding but little fiber.

Experiments made years ago with jute proved successful and tule lands should be well suited for this purpose.

## FLAX AND HEMP.

Premiums of \$1,000 were offered by the state in 1862 for the first 200 bales of flax or hemp of 200 pounds each, and for the first, second, and third succeeding year \$300, \$200 and \$100, respectively.

Flaxseed was raised in the early eighties to the amount of about five million pounds, two-thirds of which was produced in San Luis Obispo County, and the rest in San Mateo and Santa Barbara counties.

On the Rindge Tract, in San Joaquin County near Stockton, in 1916 there were 1,000 acres in hemp, which was increased to 4,000 acres in 1918, producing about 2,500 tons.

Although grown in California over a period of several years, American or "Kentucky" hemp is a comparatively new crop. It has been grown successfully in parts of California other than the delta section, but the peat lands of the delta have proven the best soil for its production, giving a yield and strength of fiber that can not be excelled in any other part of the United States. Hemp is a native of the common nettle, which grows in large quantities in the delta country adjacent to Stockton and which itself produces a very good fiber.

Although a good profit may be realized on hemp, it is not a crop for the small farmer, who can not afford the facilities at the present time necessary for its successful marketing. Nearly two years are required to realize on a crop and much expensive machinery is required. It is a very rapid grower, at times growing at the rate of more than an inch a day. It sometimes reaches a height of 18 feet, although 10 to 12 feet is considered a more desirable growth. In normal times the price is about \$150 a ton, but on account of war conditions the price has been \$240 a ton.

The average yield is about 1,200 pounds of fiber per acre in this section, while it is about 900 pounds in other states, 500 pounds in Italy and 400 pounds in Russia.

## COTTON.

Cotton planting commenced in California at an early date. An act was approved on April 25, 1862, for the encouragement of Agriculture and manufactures which offered premiums for the production of a number of products. For the first plantation of not less than 10 acres in bearing of good staple cotton, \$1,000 was offered, for 50 acres \$2,000, and for 100 acres \$3,000. At the fair held by the State Agricultural Society in 1863, Jackson and Johnson of Sacramento County exhibited samples of cotton from a field of 25 acres. Between the years 1880 and 1884 it is stated that the annual production averaged about 250,000 pounds, two-thirds of which was raised in Merced County and the balance in Kern County.

## Northern and Central California.

The cotton crop in the Sacramento and San Joaquin valleys in 1918 was an experimental one, and the acreage planted was not as large as at first anticipated. In some parts a considerable area was unproductive, owing to the land being unsuitable, too deep planting, and other causes due to inexperience, are given as the reason for failures. The results on the whole have been satisfactory, and demonstrated that this crop can be raised successfully in both these valleys.

## The Sacramento Valley.

In Butte County, near Durham, 100 acres of upland cotton was planted and the yield was 75 bales. The remainder of the acreage was upon old rice land from which no pickings were made, the crop being bad and the yield of little value.

The harvesting of the acreage planted to cotton in 1918 was a decided disappointment. There were fourteen hundred acres originally planted in the vicinity of Durham and not less than 800 to 1,000 bales were expected, as the cotton had an exceptionally good stand and looked extremely promising, but when the bolls started to mature persistent rains set in and rotted the cotton so the final result was but 75 bales ginned at the Durham gin.

The possibilities are encouraging, and within the next few years a large increase in the acreage may be looked for. Short staple or Durango cotton is recommended, as Egyptian cotton is liable to failure for the reason that it requires from four to six weeks longer to mature, and is therefore liable to be caught by frost, before maturity, and cotton is too expensive a crop to take this risk. On the other hand, while Egyptian cotton may command a higher price than the former two varieties, the expense of growing, harvesting, ginning, and smaller yield practically offset the difference. It is recognized that short staple and Durango always command a stable market.

A small quantity was planted at Cottonwood in Shasta County as an experiment of the Meade, Durango and Egyptian varieties, but the rains came before it was matured.

## The San Joaquin Valley.

There were about three thousand acres planted and about two-thirds of it gathered; 487 bales were ginned in all, of which 88 bales were upland cotton and 399 bales were the Egyptian long staple. Of the Egyptian cotton, there was only one bale of fancy grade, and this came from Bakersfield, Kern County. There were three bales of extra 1  $\frac{1}{16}$  from the Kearney Vineyard of the University of California. The production in bales of 500 pounds was as follows:

Counties	Upland	Egyptian	Total
Fresno .....	83	91	174
Kern .....		176	176
Kings .....		65	65
Madera .....	5	11	16
Merced .....		2	2
Stanislaus .....		7	7
Tulare .....		47	47
Totals .....	88	399	487

Classification	Bales
Fancy, 1½-inch -----	1
Extra, 19/16-inch -----	3
Extra, 1½-inch -----	98
Extra, 1⅞-inch -----	23
Choice, 1½-inch -----	169
Choice, 1⅞-inch -----	40

Medium, 1⅞-inch -----	6
Mixed* -----	18
Total Egyptian -----	399
Total upland -----	88
Total all cotton -----	487

\*White and Egyptian cotton.

As regards the future prospects for cotton in the San Joaquin Valley and the best kind of cotton to be grown, there is no doubt that the Egyptian long staple cotton can be grown successfully and profitably in some parts of the valley. In the Arvin section near Bakersfield, which is on the east side near the foothills, the nights are not so cool and the growing season is a little longer; also, east of Fresno, the Egyptian cotton can be grown profitably; in fact, Egyptian cotton can be grown by those who have had a little experience, in most parts of the valley where last season it was not considered possible that it could be grown profitably. The growing of this type of cotton requires considerably more attention than the upland and it must be grown just in the right way to get satisfactory results. With regards to the quality of the Egyptian cotton, it will be best to develop the Pima variety as there is no doubt about its being a little better than the Yuma variety. The New England firms who are taking this cotton, state that it is without doubt the best cotton they have ever seen from California. The cotton, which fully matured, showed more strength and was not so soft as the Salt River cotton and the grade for that class of cotton was better than the Salt River cotton.

As regards the production of the upland cotton, there is now no doubt that it can be grown and make a profitable crop for the valley. The quality of the upland cotton is said by the spinners, to whom the samples were submitted, that it was also the best California cotton they had seen, as it had more strength than the southern California cotton. The best grades of good middling sold at 33 cents f.o.b. Fresno. The Egyptian cotton produced this year will be known to the spinners next year, so that there will be less difficulty in marketing it.

All the Egyptian cotton raised in the San Joaquin Valley has been sold at the following prices:

Grade	Cents per pound
Extra, 1½-inch -----	46½
Choice, 1½-inch -----	46
Standard -----	45
Medium -----	42
Mixed -----	42

The California Products Company cotton gin at Fresno has four 80-saw gins for ginning the upland cotton and three 48-inch roller gins for ginning the Egyptian cotton. At Bakersfield they have a cotton gin with three 48-inch roller gins for ginning Egyptian cotton. At Corcoran, Kings County, the company has purchased a site for a cotton gin and will probably have it in operation for next season's crop.

#### SOUTHERN CALIFORNIA.\*

##### Imperial Valley.

The culture of cotton in California has become of commercial importance in the last few years. Commencing in Imperial Valley in 1909 with only 324 acres it increased rapidly each year.

Under the Yuma irrigation project about 5,500 acres produced 3,913 bales in the vicinity of Bard, in the San Pasqual Valley, also in Imperial County, in 1918, compared with 1,200 acres and 560 bales in 1917.

The Palo Verde Valley in Riverside County followed next, 16,300 acres being planted here in 1918, the yield of short staple being about 13,406 bales, and 250 bales of long staple. There is also a cotton gin situated at Fertilla.

In the Southern states, the production per acre has been greatly reduced since the commencement of the European war, due to lack of fertilizing agents. Imperial Valley has not suffered at all in this respect, as the land is automatically fertilized every time they irrigate with the water from the Colorado River. This fact alone has greatly assisted the farmers in that district. The yield per acre in the Imperial Valley is much larger than in any other state in the Union. In 1916 the average was 400 pounds per acre, the next highest being Virginia with 310 pounds, and Alabama the lowest with 79 pounds. In 1918 the average was much lower, being 280 pounds in Arizona, 270 in Virginia and 265 in California and North Carolina.

While the California cotton mills consumed from 8,000 to 10,000 bales of Imperial Valley cotton in 1916, a large portion of the valley's cotton was shipped to eastern mills, Japan being a very conservative buyer in the valley this season.

In 1917 much cotton was ratooned, that is, from the roots of last season's crop. This is done in order to get early fruitful growth to escape disastrous injury from possible water shortage. Water shortage in July and August, 1917, seriously injured the crop, some estimates being as high as 75 per cent.

On account of the extraordinary prices paid, the crop will probably net the growers ten to twelve million dollars. The lowest price paid to growers in 1917 was about 22 cents a pound for short staple, and went as high as 33 cents, while the long staple ranged in price from 30 to 80 cents a pound.

\*For further details regarding cotton in Imperial Valley see the Report for 1917, pages 101-103.

## Estimated Cotton Crop of the Imperial Valley, 1909-1918.

(In bales of 500 pounds.)

Year	Acres	Bales			Average price per lb., cents			Value of cotton	Value of cotton and seed
		Short staple	Durango or long staple*	Pima	Short staple	Long staple	Pima		
1909	324	350	-----	-----	14	-----	-----	\$12,810	-----
1910	9,000	5,986	-----	-----	14	-----	-----	419,000	-----

1917	120,000	45,000	25,000	-----	28	35	-----	9,600,000	11,387,500
1918	165,000	50,000	32,000	1,450	27	30	50	12,162,500	12,437,898

The figures include the cotton produced on the Mexican side of the border, which is largely operated by the residents of Imperial County, and is ginned and marketed there. About an equal number of bales are produced on either side. The following 26 cotton gins have been established in Imperial Valley: Blythe, 1; Brawley, 1; Calexico, 4; Calipatria, 2; El Centro, 3; Heber, 1; Holtville, 3; Imperial, 4; Mexicali, 4; Seeley, 3. There have been various models of cotton picking machines tried out in the valley at different times, but apparently they never made a successful demonstration.

## SILK.

The beginning of the silk industry dates back more than fifty years. In 1862 the state offered a premium of \$2,000 for the first ten bales of raw silk of 100 pounds each, and \$5,000 for the first hundred bales. Another act was passed in April, 1866, for the encouragement of silk culture offering a premium of \$250 for each plantation of 5,000 mulberry trees of two years old, for two years, and \$300 for every 100,000 cocoons for four years, but the act was superseded in 1868 by another which made some changes regarding the conditions, but to remain in force for four years. In 1868 over 800,000 cocoons were reported raised in Sacramento County. On November 18, 1880, the Ladies' Silk Culture Society was organized, and 15 acres of land secured near Piedmont for the growing of mulberry trees; on January 2, 1885, the society was incorporated. Another act was approved on March 15, 1883, appointing a State Board of Silk Culture, consisting of nine members, five of whom were to be members of the Ladies' Silk Culture Society, and appropriating \$5,000 for that purpose; \$2,500 for the year 1883 and \$2,500 for 1884.

Another act approved March 18, 1885, appointed a board of silk culture consisting of seven members, three of whom were required to be members of the Ladies' Silk Culture Society, and was granted an appropriation of \$5,000 for that year, and the same amount for 1886. The board issued annual reports from 1883 to 1888, when the appropriation was discontinued. In one of the earlier reports it is stated "That silk production can be carried on successfully in California none who have given any attention to the history of agriculture venture or experiments can doubt." In the fourth annual report of the Ladies' Silk Society for 1889, the question is asked: "Will the silk industry pay

in California? As a commercial or agricultural industry on a large scale, no; as a home, family or a cottage industry we most emphatically answer, yes." "Filatures may be carried on by capitalists, but the raw material or cocoons should be a family industry." At the Centennial Exhibition held in Philadelphia in 1876, a silk culture display was made by California. At the State Fair of 1867 the first prize of \$50 was awarded for the best exhibition of silk from feeding of the worms to the weaving of silk.

The center of attraction at the State Fair in 1883 was the filature or silk reeding machines.

In 1918, 251,447 pounds of cocoons, value \$319,349, were imported and 34,846,197 in raw skeins, value \$183,076,241.

The first mulberry trees raised in California were from seed imported in 1854 from France and planted at San Jose. Nearly all varieties of the mulberry have been introduced into California, but most attention has been paid to those most suitable for feeding silkworms, of which the white variety is said to be the best.

The Seriterre Company, a corporation organized for the purpose of engaging in silk culture on a commercial scale in California, has planted its lands in Butte County. The company's common stock has been issued in exchange for an agreement to transfer to it approximately 800 acres of land near Wyandotte.

Although formed in the autumn of 1917, the company has had to start at the beginning and grow its trees from the seed. It already has set out seventy thousand trees, which will be sufficiently grown to give a silk crop in 1920 and during the current year it will transplant a much larger number of trees now at its nurseries in Butte and Sutter counties, which will yield a crop in 1921. No effort has been made, up to the present, to manufacture any silk, but the company expects to make cocoons enough in 1920, from the lands already planted, to warrant the erection of a filature mill of eighty basins. All questions of cost, both in the fields and in the mill, have been tested on a commercial scale. The company has found that there is ample labor in California already skilled both in growing and reeling cocoons to man a mill of much larger size and that this labor may be had at prices which will enable the company to compete successfully with foreign producers of raw silk of the same quality.

The work of the company has attracted considerable interest and requests for trees and information concerning the growing of cocoons have been received from every county in California as well as from adjoining states. There are some authorities, however, who point out that previous efforts have ended in failure, and that owing to labor conditions it will be impossible to compete with Oriental labor. All new enterprises should be welcome in California, and the results of this venture will be looked forward to with interest.

In 1917 the California Silkworm Culture Farm was established at Hayward, Alameda County, by a company formed by Japanese. It is stated that "when silkworms were imported some two years ago from Japan it was doubtful whether the climate, soil and seeds, all necessary elements for successful silk farming, were suitable. It had developed that the state of California is better fitted for the growth of this industry than Japan. The worms require a dry climate, and in Japan there has been considerable loss due to disease resulting from wet weather,

prevalent in that country. Disease amongst the silk worms in this state is unknown.

The principal and only food of the silk worms is the leaves of the mulberry trees, of which there are eighteen varieties. These trees have been imported from Japan and thrive upon the rich soil of this state. It is upon the food that the silk worm depends, and as a result of the successful transplanting of these trees the cocoons are of a better quality than those in Japan. Successful maturity of these trees has resulted in the worms being able to bring forth the best quality of silk. These trees will not only grow, but thrive wonderfully well in nearly all parts of California, requiring no more care in their culture than ordinary fruit and forest trees.

The raising of cocoons is necessarily a home industry and should appeal particularly to the women as well as the men of a family. The work necessary to be done in caring for the worms is not hard or arduous and may be undertaken on a small scale and as a side issue.

The only silk mill manufacturing silk thread west of Michigan is at Petaluma, Sonoma County, which has a monthly capacity of an average of 5,000 pounds of gum silk and about an equal amount of finished silk. This would be 60,000 pounds a year.

In Petaluma they start with the raw silk as wound from the cocoon; the winding of raw silk from the cocoon is done exclusively in China and Japan. This raw silk so wound into skeins is continued through the process to the gum state, which is its condition when it comes off the machinery prior to dyeing to the several shades necessary for the range of colors which are produced.

The production consists of spool silks for domestic use for dry goods stores, sewing silk for manufacturing purposes such as making of boots, shoes, clothing, hats, gloves and so on; also embroidery silks for all purposes and knitting silk for the manufacturing of garments, hats, caps; tram silk for the covering of cords, braids, and the manufacturing of surgical goods—in fact, all kinds of silk threads for whatsoever use.

#### TOBACCO.

In 1882, 26,590 pounds of tobacco was reported on about 27 acres, nearly all of which was in Los Angeles County, and part near Colton, in San Bernardino County, but as recently the product was said to have a slightly pungent flavor.

For several years extensive and exhaustive experiments in the production of tobacco from Turkish seed were carried on at the Exter Tobacco Ranch in Tulare County. There have been a number of types of tobacco experimented with, but the types that have been attended with the greatest success are such as are suitable for cigarette manufacture. The tobacco raised during recent years has been produced about equally by Fresno and Tulare counties, the total quantity being 7,500 pounds in 1909; 15,000 in 1910; 45,000 in 1911, and 150,000 in 1912. The 1912 crop sold at from 30 cents to 60 cents per pound; most of it averaged 47½ cents. Some tobacco is also grown in Los Angeles County and the southern part of the state.

In 1913 the crop of leaf tobacco amounted to about 175,000 pounds, some of which it is stated was purchased by the Eastern market. According to a leading authority, the crop was not as good as in former years, owing to the farmers planting too large an acreage and

not being familiar with the culture of tobacco. The growers in Fresno County, where a considerable quantity has been produced, have experienced much difficulty in disposing of their crop at a fair price, so the cultivation of tobacco declined. Owing to the war, a revival of the industry appears to be in progress. In 1917, 14 acres of tobacco was raised in Fresno County, near Sanger, producing 12,000 pounds, which was sold to an Eastern buyer at 80 cents a pound. The crop produced about 1,000 pounds an acre. This success will probably result in a much larger planting during the coming year.

The growers made money in 1917, and would have made large profits in 1918 had the war continued, but prices have fallen heavily and the large concern which last year purchased the crop offer considerably less than 60 cents per pound, and the growers claim that it costs that much to raise a crop. They still have to realize that price when all embargoes are lifted, but the growers are discouraged and it does not seem as if tobacco can be profitably raised in normal times under such conditions.

#### San Joaquin Valley Crop, 1918.

There were in the season of 1918 approximately sixty growers who planted tobacco of the Cavala and Samssoon variety. Of the latter variety little was planted. Sixty growers planted something like five hundred acres and the total yield of the tobacco crop for the season of 1918 was almost 300,000 pounds.

The quality of tobacco was pronounced by experts both in New York and in Chicago as much better than the quality of Turkish tobacco grown in the previous years in this valley. Although the candid opinion of tobacco experts is that there is a certain kind of bitterness in the tobacco grown in Fresno Valley which is hard to extract or get rid of. The tobacco grown in this valley heretofore has been used for the manufacture of cigarettes. The tobacco crop of 1918, while it did not contain as much bitterness as the crop of other seasons, yet there was some bitterness in it.

Prospects for the disposal of the crop of 1918 for a time looked very favorable. Growers with all the right expected to realize a price of a dollar to a dollar and fifty cents per pound for their crop, and they would probably have continued to receive high prices had it not been for the cessation of the war.

The armistice was signed in November and as early as in December tobacco in large quantities commenced to come to New York port, with the result that no price was offered for California tobacco.

At the present there is on the hands of the growers not less than 250,000 pounds, of which amount at least 200,000 is pooled.

In Yolo County 30 acres were planted in 1918, which produced 24,000 pounds of Cavala leaf tobacco, which was sold at \$1.00 a pound; in 1919 the same grower planted 200 acres which he expects will produce 200,000 pounds of the same quality.

In Placer County 20 acres planted between Newcastle and Penryn is reported to have produced about 8,000 pounds, which was sold at New York for \$1.45 per pound. In Santa Clara County 50 acres near Mountain View averaged 1,000 pounds per acre, which sold at from \$0.85 to \$1.25 per pound. There were about 10 acres in Tulare County, but details are not available. A small acreage was planted in Butte County in 1917, but the crop was destroyed by fire. None was grown in 1918, but about 40 acres has been recently planted.

## CALIFORNIA FARM CROPS, 1898-1918.†

## BARLEY, BUCKWHEAT, CORN, OATS, RYE, WHEAT, POTATOES, HAY.\*

(Compiled from the Reports of the United States Department of Agriculture.)

## California Barley Crops, 1898-1918.

Year	Acreage	Average yield per acre, bushels	Production, bushels	Average farm price, December 1	Farm value, December 1
1898	872,833	10.5	9,164,746	\$0 65	\$5,957,085

1896	690	18.7	12,903	39	5,032

NOTE.—The production of buckwheat is so small that it has not been recorded in recent years, the area being only a few hundred acres. The crop is raised in only twenty-four states. Very little is exported. The acreage in buckwheat in California in 1910 was only 849, producing 14,681 bushels.

\*For production of these crops by counties, see page 132.

†For imports and exports, see pages 101-103.

## PART VI.

## VEGETABLES AND NURSERY PRODUCTS.

**Asparagus, Artichokes, Brussels Sprouts, Cabbages, Cucumbers, Cantaloupes, Cassabas and Watermelons, Celery, Lettuce, Garlic and Onions, Tomatoes, Rhubarb; Strawberries; Leading Vegetable Districts and Acreage; Vegetable Shipments in 1918; Canned Vegetables; Mustard Seed and Licorice; Ginseng; Flowers, Nursery Products and Seeds; Dried Vegetables; Cork, Tan Bark, and Tanning Extract.**

## LEADING VEGETABLE DISTRICTS OF THE MOST IMPORTANT CROPS.

**Artichokes.**

Globe artichokes are grown in a small way in various parts of the state, but the extensive commercial production is done in San Mateo County, exclusively.

**Asparagus.**

Probably by far the largest asparagus district in the United States is located in the San Joaquin-Sacramento delta. Aside from this delta section the Imperial Valley is the only car lot shipper.

**Brussels Sprouts.**

Brussels Sprouts are grown extensively in San Mateo County.

**Cabbages.**

Cabbages for commercial shipment are confined almost entirely to Los Angeles, Orange, Imperial, San Mateo, San Diego, Ventura, Sacramento, and San Joaquin counties, the bulk of the spring shipments coming from the two counties first mentioned.

**CANTALOUPE, OR MUSKMELONS.**

It is not realized, generally, by cantaloupe growers, to what extent the commercial production of this fruit has advanced during the last ten years in all the states where they are raised. California is by far the largest producer. The Imperial Valley is the earliest and probably the most important muskmelon-growing district in the United States today.

The Turlock district in Stanislaus County, in the San Joaquin Valley, produces large quantities, and the district is notable in that it is the only Western muskmelon section not depending upon surface irrigation. The crop was not generally very profitable prior to 1915.

The following summary shows the leading districts in Imperial Valley where cantaloupes are grown:

**California Shipments in 1914 (May 15 to August 1).**

	Carloads		Carloads
Brawley -----	2,411	Sultana -----	26
Heber -----	777	Coachella -----	21
Keystone (Grape) -----	606	Thermal -----	20
Turlock -----	524	Imperial -----	4
Calexico -----	438	Meloland -----	3
Keyes -----	164		
El Centro -----	152	State total -----	5,146

## Increase in Shipments from Imperial Valley, 1905-1918.

	Carloads		Carloads
1905 -----	297	1912 -----	2,887
1906 -----	577	1913 -----	3,502
1907 -----	644	1914 -----	4,722
1908 -----	1,891	1915 -----	4,448
1909 -----	1,411	1916 -----	4,617
1910 -----	1,621	1917 -----	5,041
1911 -----	2,580	1918 -----	4,402

The commercial production is confined almost entirely to two counties, Imperial and Stanislaus, the former having about four times the area of the latter. Tulare County is now raising a considerable crop.

**Cassabas and Watermelons.**

Cassabas are grown commercially in Los Angeles, Orange, Imperial, Stanislaus and Tulare counties, the acreage being fairly evenly divided.

Watermelons are grown commercially in Tulare, Fresno, Merced, Imperial, Riverside, Los Angeles, and scattering counties.

In 1915 California had 5,503 acres in watermelons and the United States 96,508 acres.

In 1916 the acreage in cantaloupes in the state was estimated at 16,300 and that of watermelons 4,500 acres. The total acreage in the United States being 39,700 of the former, and 98,100 of the latter. In 1917 the acreage in cantaloupes in California was 17,300, and in watermelons 3,600 acres.

**Celery.**

Celery is an important crop and was formerly grown on a large scale in Orange County, but owing to the blight it has ceased to be a commercial crop in this county, the growers turning to lima beans and sugar beets, which are more certain and less expensive to raise. A large quantity is raised near El Monte, in Los Angeles County, and also a large acreage near Stockton, in San Joaquin County, and also in Contra Costa and Sacramento counties.

**Cauliflower and Broccoli.**

More than half of this crop is grown in Los Angeles County; 25 per cent in the vicinity of San Francisco Bay, and the remainder in scattering counties.

**Cucumbers.**

Of the number of factories reporting cucumbers the product of which was manufactured, Michigan is far in the lead over all others, having 176 factories in 1918, with 31,534 acres; Wisconsin second with 9,109 acres, and Indiana third with 5,659 acres. California had five factories and 794 acres. Cucumbers are grown for shipment in Los Angeles, San Diego, Yuba, and Alameda counties.

**Lettuce.**

About half of this acreage is in Los Angeles County; Imperial County ranks second and the balance in other counties.

**Commercial Acreage of Garlic.**

It is estimated that the commercial acreage of garlic in the states named below in 1917 was about 1,545 acres, as compared with 2,065 acres in 1916, a decrease of 520 acres, or about 25 per cent.

State	1917 (acres)	1916 (acres)
Louisiana -----	725	1,160
Texas -----	680	540
California -----	110	125
Arkansas -----	50	100
Totals -----	1,565	1,925

*California.*—Imperial, Los Angeles, Riverside, San Joaquin, San Mateo, Santa Cruz, and Santa Clara counties produce most garlic.

The imports of garlic into the United States during the fiscal year ending June 30, 1916, were 9,471,619 pounds. None has been reported the last two years.

**Onions.**

The onion crop the last few years has not changed much. San Joaquin, Contra Costa and Santa Barbara counties are the leading producers of onions. The total acreage and production the last five years has been as follows:

Year	Acreage	Yield per acre, bushels	Total production, bushels
1914 -----	9,924	400	3,969,600
1915 -----	8,128	375	3,048,000
1916 -----	5,300	348	1,844,400
1917 -----	10,412	180	1,874,160

The main crop of late onions is grown in the San Joaquin delta. The production of the Bermuda type of onions is more restricted, being grown commercially in Riverside and Imperial counties only.

**Rhubarb.**

The commercial growing of rhubarb is also very limited. Aside from the districts which grow for canning and shipment in mixed cars, Alameda County is the only county which ships in car lots as a general practice.

**Potatoes.**

Potatoes are more widely adapted to local conditions than some of the other crops, but the production of early potatoes on a commercial scale is restricted to districts which are relatively less frosty. The largest producing district for potatoes in the state, which is located in the San Joaquin delta, produces a small proportion of the early crop.

Less than 10 per cent of its plantings could be called early potatoes. The early potato districts of the state are limited to a few counties which have favored locations suited to early planting and rapid growth. Out of 58 counties in California, only 10 are important as producers of early potatoes.

#### Tomatoes.

The production of tomatoes has increased so much in recent years that it has become an important crop. The season is from about June 15 to October 1.

Tomatoes are quite widely grown for canning, but the shipping districts are much more limited. While tomatoes are shipped in car lots from Merced, Sacramento, Santa Clara, Alameda, Yuba and San Joaquin counties, over 90 per cent of the shipments originate in southern California, principally from Los Angeles and Orange counties, but also from Imperial and San Diego counties.

#### Strawberries.

Strawberries are grown for the markets of San Francisco, Oakland and other cities in several of the central coast counties, but the principal districts for the distant shipments are in Sacramento and Los Angeles counties. Shipping districts of secondary importance are in Imperial, Placer, Fresno, and Siskiyou counties.

VEGETABLE SHIPMENTS FROM CALIFORNIA IN 1918.\*

\*Estimated by the California Vegetable Union.

#### TRUCK CROPS IN 1918.†

The normal annual production of truck crops for shipment from California amounts to between thirty-five and forty thousand cars. The normal annual production of vegetables grown for canning in California amounts to about 7,000,000 cases.

†By R. G. Risser, Assistant Truck Crop Specialist, Bureau of Crop Estimates.

The calendar year 1918 was not up to normal due to various causes amongst which were the unsettled conditions of war time, the scarcity of labor, unfavorable weather conditions and losses due to insects, plant diseases, etc.

Included in the list of truck crops which are important in this state are a number of the staple vegetables and several California specialties. The climatic conditions in this state make possible the growing of crops which are not grown so extensively elsewhere and the shipment of certain products at a season when they will meet with little competition from other sections.

*Artichokes.*—Enjoying a practical monopoly of the trade in the large Eastern markets, the California artichoke is one of the leading vegetables grown in the central portion of the state for shipment during the cooler part of the year. The extensive character of the production of the burr or globe artichokes as carried on in America's foremost district may surprise those who are not familiar with the business. Lying along the coast and extending into the coast valleys and canyons of San Mateo County, 4,200 acres of artichokes are under cultivation and constitute the chief crop of the district. Covering a narrow strip of land twenty miles in length from Montara to Pescadero artichoke fields are to be seen on the rich loam and clay loams south of San Francisco. The production of artichokes is thus the principal agricultural enterprise centered in the Half Moon Bay District, and as the market for the product expands artichokes will become more conspicuous on the Pacific Coast.

A large part of the production is consumed locally, as San Francisco consumes a larger quantity per capita than any other American city. A lesser quantity is canned in Half Moon Bay, San Francisco, Los Angeles, and Long Beach, being purchased for this purpose after the shipping season is over. The product is shipped in a big way in straight earlots and is also consolidated with other vegetables in San Francisco and Los Angeles and shipped in mixed cars.

Three hundred and sixty-six cars were shipped East during the season 1918-1919, which recently closed. As a whole the season was not a profitable one. Early shipments came on slowly and commanded a good price but the shipments during the latter half of April were heavier than ever before for that period. The bunched maturity of the crop made the season unsatisfactory for returns to growers.

*Cantaloupes.*—The extension of the area of cantaloupes in California is indicated by the following figures, the first two being from the census and the last from estimates of the plantings in the principal counties:

Year	Acres
1899	764
1909	5,784
1919	25,560

The crop is now grown commercially in Imperial, Stanislaus, Los Angeles, San Joaquin, Tulare, Kern, Merced, Riverside, and Madera counties.

Eight thousand cars may be considered the normal production. Six thousand eight hundred forty-one cars were rolled last year from this state, which was over half of the car lot volume reported for the entire United States. This was not considered a good crop, however.

*Cauliflower.*—There are but few districts in the United States which produce carlot quantities of cauliflower, and shipping records for 1918 show that California rolled more than twice as many cars as any other state. The California acreage and shipments for the past three seasons has been as follows:

Locality	1916-1917		1917-1918		1918-1919	
	Acreage	Cars	Acreage	Cars	Acreage	Cars
Southern District -----	3,200	1,050	4,800	1,544	3,450	1,164
Central District -----	1,100	604	1,600	629	1,300	420
Total for state-----	4,300	1,654	6,400	2,173	4,750	1,584

The southern district is almost all included in Los Angeles County. The principal acreage in the central district is in San Mateo County. San Francisco County, Alameda County, Sacramento County, and Contra Costa County have also contributed to the commercial output.

In addition to the shipping stock the quantity used for local consumption, pickling, and seed production should be considered. Large quantities also go out in mixed cars.

*Celery.*—While the commercial production of celery has been established in California for more than twenty years, seldom, if ever, in that period has the price per crate to the grower been so high as during the season 1918-1919. This was not due to large sizes or exceptional quality, for in Los Angeles County particularly, the stock was shipped out before it had grown to the usual size. The short acreage, the damage from rains in the Delta District, prompt transportation service, light competition from Eastern districts, and the extraordinary buying power of the country's population combined in contributing to this result.

The celery acreage of California in the commercial districts for the past three seasons has been as follows:

Locality	1916-1917	1917-1918	1918-1919
Southern California -----	1,100	1,450	930
Central California -----	3,352	4,032	1,960
Totals-----	4,452	5,482	2,890

The straight car shipments for the season 1918-1919 were as follows:

Locality	Cars
Southern California -----	377
Central California -----	1,103
Total-----	1,480

These were the lightest shipments of recent years and were a marked contrast to shipments of the previous season, which totaled 2,756 cars.

The counties where celery production is commercially important are as follows: Contra Costa, Sacramento, Los Angeles, San Joaquin, Orange, San Diego, Alameda, Santa Clara, Monterey, and Santa Cruz.

*Chili Peppers.*—The commercial cultivation of chilis is almost wholly confined to a small territory in Southern California, between the mountains and the sea. It is true that the crop is grown in a small way in New Mexico. It is also true that Los Angeles and San Diego counties grow small areas, but the bulk of the chili peppers produced in the United States are from Orange County.

The crop last year was estimated as follows:

Products	Acreage, 1918	Average yield, pounds	Total production, tons
Mexican chili .....	2,000	1,400	1,400 dried
California chili .....	1,200	1,300	780 dried
Sweet peppers (pimientos) .....	2,100	7,000	7,350 green
Total acres .....	5,300		

*Lettuce.*—The scale upon which lettuce is being grown in California is little appreciated. Thousands of acres are planted to the crop every year and many fields are utilized to grow two crops in one year. From available shipping records it is estimated that the total shipments of lettuce in 1918 were equivalent to nearly 3,000 cars, some of it being consolidated with other vegetables and handled as mixed cars. The large daily shipments from Imperial Valley and the long shipping season of Los Angeles County are features of California's lettuce production. The season just closed has been one of the most profitable on record for lettuce growers as prices were exceptionally high. The normal yield is 300 crates per acre, averaging four and a half dozen heads each.

*Onions.*—The area of onions in California has more than doubled since the last census was taken. In 1909 there were 4,391 acres of onions grown in 47 counties. Acreage figures for all counties are not available for 1918, but the acreage harvested from the ten most important counties amounted to 12,112. Plantings for the 1919 harvest were considerably lighter, but are still twice as large as the acreage of 1909.

Onions are grown incidentally in many districts of the state, but in the Coachella Valley of Riverside County and the San Joaquin Delta of San Joaquin and Contra Costa counties they are one of the most important crops.

*Peas.*—Peas are grown in California for local consumption, Eastern shipment, canning, and seed purposes. As a pea-growing state, California has certain climatic advantages, and in the Imperial Valley the state has the earliest important pea-shipping district in the country. Following the Imperial Valley, Los Angeles, Alameda, Santa Clara, Ventura, and San Luis Obispo counties furnish supplies for shipment. San Diego and Orange counties have pea-growing districts still earlier than Imperial, but they have not yet developed into shippers of straight

cars. San Mateo County is the latest producer of peas in the state. Most of the peas for canning are grown in Alameda, Santa Clara, Stanislaus, San Joaquin and San Mateo counties.

The season 1918 was not a good one for California peas. In the Central Coast district the acreage was reduced on account of labor scarcity. In Imperial Valley blossoms were killed by frost, and in San Diego County the mildew was bad. In the hill districts of Los Angeles, Alameda and Santa Clara counties, shortage of rainfall affected the yield and quality. The season of 1919 has also been unsatisfactory in certain districts.

The area devoted to this crop in 1918 was estimated as follows for California:

Products	Acres
Peas for canning .....	2,674
Peas for seed production.....	1,889
Peas for shipment and local markets.....	1,750
Total.....	6,313

#### Potatoes.

The Irish potato is the most widely and extensively grown truck crop in the United States. Despite the fact that the per capita consumption of potatoes has not yet reached the point in this country which it has reached in Europe, the product is of great economic importance as a daily food of the nation.

In California since the earliest days of American settlement, the potato has been popular in an agricultural way, and as the Western country has developed the commercial importance of the potato in this state has increased.

The earlot shipments from last year's California crop as reported to the Bureau of Markets amounted to over 10,000 cars, and the annual value of the crop to the growers of the state represents several millions of dollars. In point of acreage and volume shipped, the potato has so far held first rank among the extensive truck crops of California.

In California records show only seven counties in the state to have shipped out over 100 cars each. These counties ranged in the order of their importance as producing districts are San Joaquin, Contra Costa, Los Angeles, San Mateo, Sacramento, San Bernardino and Orange. Thirty-four other counties contributed to the earlot movement, among which the most prominent were Santa Cruz, Monterey, Kern and Riverside. The counties which handled over 100 cars each, however, shipped 94 per cent of the total.

Potatoes grown for the early markets of California cities are planted on the relatively frost-free slopes and elevations of the Coast Range. Potatoes grown for early summer shipment to Western markets are produced mainly in the coast valleys of Southern California. Potatoes grown for the main shipping and storage crop of the state are chiefly from the reclaimed peat lands of the San Joaquin delta. Potatoes grown for seed purposes are largely from the alluvial soils near interior rivers or from higher elevations in the Sierra Nevadas.

The matter of variety is partly a question of local adaptation and partly a question of market preferences. In general, markets served by the California potatoes desire a white potato, long rather than round. Hence the Burbank is the standard variety for the main crop. The White Rose, which is the standard variety in Southern California, and the American Wonder, which is the most popular early sort in Central California, approach this type. Other varieties are also grown, such as the British Queen, Green Mountain, Peerless, Irish Cobbler, etc. The only red sort of commercial prominence is the Garnet Chile which is grown extensively in San Mateo County, particularly in the Colma district. This is one of the earliest potatoes marketed in quantity in California and the markets of the northwest, and is not seriously affected by competition with white varieties at that time. The early Jacksons and Democrats are also produced in the San Francisco bay districts, especially in the hills of Alameda and Santa Clara counties.

The use of large bodies of newly reclaimed peat lands in the San Joaquin Delta for potato production on a large scale has been the chief factor in maintaining the yield of the commercial crop at the level which it now holds. Yet, the yields on these lands decline very rapidly with continued cropping, and since practically all of the area has now been brought under cultivation, other methods of getting big yields must now be practiced.

The usual yield of potatoes on newly reclaimed peat lands of the San Joaquin Delta exceeds 16,000 pounds per acre. The usual yields on the same lands after a few years of potato cropping is about half as large. The usual yields on the valley lands of Southern California run from 4,000 to 8,000 pounds per acre. The usual yields of extra early sorts on the nonirrigated slopes of the Coast Range are from 2,500 to 3,000 pounds. In dry seasons they fall far below this figure.

A yield of 55,000 pounds has been produced in the Sierra Nevada foothills where fertilization and special cultural measures were used. Yields of 50,000 pounds have also been secured in the San Joaquin Delta. Yields of 35,000 pounds have sometimes been made in Southern California.

The average yield of the potato crop of California, including both commercial and smaller plantings for 1918 as determined by the Bureau of Crop Estimates, was 143 bushels, equivalent to 8,580 pounds or 725 well-filled sacks holding 120 pounds each.

The yield of the crop harvested during the spring and early summer, which consisted principally of early varieties and included the non-irrigated crop, was estimated at 5,500 pounds per acre.

*Rhubarb.*—One of the few perennial truck crops grown commercially in California and one of the earliest products shipped East from the Central part of the state is rhubarb. There are several counties in the state which grow an acreage of rhubarb, but Alameda and Los Angeles counties are the only ones which ship East in quantity. The former has about 500 acres and the latter about 150 acres of rhubarb. Santa Clara County also grows the crop, but most of it is consumed locally or used by canners as in the other counties which do not contribute to Eastern shipments. A normal yield is from two hundred to three hundred boxes per acre of 40 pounds each, but this year the crop came on so late that the district in Alameda County shipped only

84 cars. The principal varieties grown are Strawberry and Winter Crimson. Carlot shipments usually start the first part of March and amount to 150 cars in a normal season.

*Spinach.*—The canning of spinach in California was at one time believed to be impracticable because of the difficulty of removing the grit. The shipping of spinach from California was believed to be impracticable because of the highly perishable nature of the product which necessitated express shipping, and gave the districts in closer proximity to the large markets a big advantage in transportation costs. The production of seed on a commercial scale was believed to be impracticable because of the cheapness of labor in the competing seed districts of Europe.

The canning of spinach was made possible, however, by the invention and use of special machinery for washing the leaves. The possibilities of shipping the product were brought out following a freeze which destroyed the crop in competing districts, and the opportunity to grow the crop for seed was presented when war time conditions cut off European sources of supply and opened up new markets for California.

Not until the season of 1917-1918, however, did commercial spinach production become really important. It was then that the first large crop of spinach was grown for canning; that the first important Eastern shipments of spinach were made in the fresh state, and that the first extensive area of spinach devoted to seed production was grown.

The pack for the spring of 1918 amounted to 418,368 cases. Only a few cars were shipped East, but they were a beginning; 4,259 acres were planted for seed and 3,059 acres of seed harvested. The average yield of green spinach was 4.6 tons.

#### CANNED VEGETABLES, 1899-1909.

California ranks first among the states in the production of canned asparagus and sixth in that of canned tomatoes. The case which is used as the unit of measure consists of 24 standard-size cans No. 2 (also called 2-pound cans) for beans, peas, and No. 3 (also called 2-pound cans) for all other vegetables. Where the output has been reported in other forms by the canneries, the quantities have been reduced to standard cases.

The principal counties producing tomatoes are Los Angeles, Orange, Alameda, Santa Clara and Sonoma. There is also a considerable acreage in certain portions of the San Joaquin and Sacramento valleys. The average yield of tomatoes grown for the canneries varies from 8 to 10 tons. Under favorable conditions yields of from 15 to 20 tons, and occasionally of 25 tons per acre, are realized. The prices paid by the canneries vary from \$6 to \$8 per ton, while the prices paid in the fresh markets vary from \$10 to \$40 per ton.

The value of the vegetables canned increased throughout during the decade of 1899-1909, the rates of increase from 1904 to 1909 being much higher than that during the preceding five-year period. The value of canned asparagus formed over half of the value of all canned vegetables in 1909.

## Canned Vegetables, 1904-1914.

(Compiled from the reports of the Bureau of the Census.)

## Mustard Seed.

The mustard crop produced in 1918 was very light on account of a smaller acreage being planted. It is estimated that the entire crop amounted to about 8,000 bags, being divided as follows: 1,500 bags of yellow and the balance Trieste seed.

The prices realized for mustard last year were exceptionally high, Trieste sold as high as 20 cents and the yellow as high as 25 cents per pound. This, of course, was caused on account of war conditions, no seed being imported from Europe and the growers took advantage of the situation, but the trade bought sparingly on account of the high prices.

The yield last year per acre was very good as weather conditions were favorable, although there would have been a larger acreage planted

were it not for the fact that the rain held off too long and it was too late to plant the seed.

Most of the mustard seed is raised in Santa Barbara County, near Lompoc, but there is a small acreage in other localities.

The acreage planted in 1917 amounted to about 3,500 acres, and the yield averaged about six bags per acre, which was less than one-half of a normal crop. A fair average crop of mustard is about 1,500 pounds per acre. The reason of the short crop was on account of no late rains in the spring of the year, which is very essential for a mustard crop.

#### Licorice.

This plant is cultivated throughout the warmer parts of Europe, and to some extent in California and Louisiana, and there is much suitable ground in this state where it might be grown profitably. At present Russia supplies practically the whole world with licorice.

This article a generation ago was known and used mainly for its medicinal properties, but has since found other and wider applications, particularly in the tobacco industry of the United States and Canada, which consumes annually many thousand tons of licorice. The amount of licorice root imported varies considerably. Previous to 1914 it was free; in that year 115,636,131 pounds were imported, in 1917, 59,400,224 pounds, valued at \$2,190,882, and in 1918, 26,982 pounds, valued at \$1,853,927, were imported. In addition to this a considerable quantity is imported in the form of extracts and paste.

#### Peppers—Pimientos.

The Spanish sweet pepper or pimiento is cultivated largely in Spain where the highest grade come from Valencia, where they are also canned in large quantities. It is also grown largely in Jamaica, and is known in many markets as allspice. An essential oil produced from the seed is used for medical and perfuming purposes. There is the large, green, mild variety and the red and fiery. In the California markets the two kinds or conditions stand side by side.

In 1918 there were about 60,000 cases of chili in 5-ounce cans, 72 to the case, packed in California, and about 90,000 cases of pimientos in 8-ounce cans of 100 to the case. Practically all of this raw material was grown in Orange County, a little in Los Angeles, and a very small quantity in San Diego.

The sweet peppers are used for canning almost entirely. The California Long Red or Anaheim chili is used for canning, but principally for drying. The Mexican variety is used entirely for drying.

#### GINSENG IN CALIFORNIA.\*

Many demands are made for information regarding the cultivation of this plant, as some farmers are under the impression that owing to its high price it must be an exceedingly profitable crop, but it offers little inducement for inexperienced growers looking for quick profits from a small investment. The plant takes eighteen months to germinate, and six years to mature; it requires good soil, shade, and careful cultivation. The necessity of preparing root in accordance with Chinese ideas, rather than American ideas of what the Chinese ought to want, must not be forgotten.

\*For a full description of the cultivation and prices of ginseng, see Report for 1913, pages 85-86.

Ginseng is only cultivated in small lots. The total acreage in the United States in 1910 was only 23 acres; the value of the ginseng produced was \$151,888.

Exports of Ginseng from the United States, 1914-1918.

Year	Pounds	Value	Year	Pounds	Value
1914 -----	224,605	\$1,832,686	1917 -----	198,480	\$1,386,203
1915 -----	103,184	919,931	1918 -----	259,892	1,717,548
1916 -----	256,082	1,597,503			

Ginseng is shipped to Hongkong, where a syndicate of Chinese merchants control almost the entire ginseng trade of China, receiving the importations and distributing them throughout the country.

The only competitor America has to fear in this line is Japan. If it is desired to place unmatured American ginseng on the market, the roots should be fumigated with sulphur, which permits of their longer preservation without deterioration. American ginseng is usually imported in its original state. The Chinese buyer assort the roots according to quality. Some are put into cloth sacks and shaken until the skin becomes smooth, and those resembling the human form are boiled in sirup and afterwards fumigated with sulphur. In this way their value is considerably increased.

In 1918 the upset condition of things in China, the general business uncertainty, and the fact that a large part of the Chinese consuming public has had no money with which to buy such luxuries have so reduced demand that it has been impossible to get good prices for the American or any other root.

In September, the best price offered for fair-grade root was \$3.60 gold per pound, and \$1.30 gold per pound was paid for trimmings and fibers. Higher-grade root resembling the wild in shape and color brought nearly \$5.00 per pound.

All things considered, the demand for American root during 1917 was quite fair, but prices in China were low, and under normal conditions the return to American exporters would have been very unsatisfactory. But prices to consumers of ginseng are fixed in silver. With silver high in value the return to American growers was increased proportionately.

## Vegetables, Flowers and Plants and Nursery Products, 1899-1909.

(Compiled from the reports of the Bureau of the Census.)

Crop	Number of farms	Acres		Value of products	
		1899	1909	1899	1909

\*Not including 9,393 farms that had vegetable gardens, but gave no information as to their products.

## FLOWERS, PLANTS, AND NURSERY PRODUCTS.

The choice of crops by the florist is largely influenced by changes in popular taste, the camellia, which was the most popular flower years ago, having been superseded in recent years by the rose, carnation, violet, chrysanthemum, and lily of the valley. There is also a growing demand for orchids.

The raising of flowers and plants and of nursery products is also of considerable importance in California, 5,816 acres being devoted to them in 1909, and the output being valued at \$3,601,301. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

In 1909 a total of 96,230,420 square feet, or over 2,200 acres, of land under glass was reported in the United States.

In California, 430 farms were reported as florists establishments, with 1,572,480 square feet under glass.

There is comparatively little land under glass in California, compared with the Eastern States, as the climate does not require it.

As the rose is grown in California in such profusion some experiments might be made to produce the famous "attar of rose," which is the most ancient and attractive industry in Bulgaria, where about 20,000 acres are devoted to rose culture. Nearly all the attar of rose is exported to London, Paris and New York. In 1910 the amount exported was 216,000 ounces, and the average price prior to the war was \$12 per ounce.

In Bulgaria but two varieties of roses are cultivated, the red, "Rosa Damascena," and the white, "Rosa Alba," which are combined in the process of distillation; but the red rose, which resembles the French "Rose du Roi," is richer in perfume and essence than the white. In the Rose Valley, where there are some 20,000 acres of gardens, the atmosphere of the entire district is charged with perfume when the roses are in bloom.

## FLOWER AND VEGETABLE SEEDS IN 1916-1918.

Imports of Forage Plant Seeds Permitted Entry into the United States Under the Seed Importation Act.

(Compiled by the Seed Laboratory of the Bureau of Plant Industry, United States Department of Agriculture.)

Kind of seed	Fiscal year ending June 30,			
	Pounds, 1919	Pounds, 1918	Pounds, 1917	Pounds, 1916

Italian -----	207,800	606,000	480,700	382,841
Timothy -----	154,600	22,400	4,400	118,737
Vetch:				
Hairy -----	256,500	231,200	295,600	67,683
Spring -----	435,200	117,600	29,900	61,613

The growing of seeds has become an important industry in the state, the area in 1916 being upwards of 16,000 acres. Of flower seeds sweet peas are cultivated on a large scale, 1,600 acres being reported in 1916, and upwards of 2,000 in 1917.

The largest acreage is in onion, carrot, lettuce, radish, and spinach, of which there are a very large acreage of each. Other vegetable seeds grown are parsley, parsnip, endive, beet, salsify, chicory, mustard, and celery.

During the past year the acreage in seeds has been increased almost threefold on account of the war. Instead of a few hundred acres of lettuce, raddish, onion, carrot, or beet being grown in every case the figures run into the thousands. Quite a large acreage in spinach is being grown, as none can be obtained from the former source of supply in Holland. The largest increase in acreage has taken place in Sacramento, San Joaquin, and Yolo counties, where the bulk of carrot, onion, beet, and spinach crops are being planted. In 1917 the total seed acreage in the state was upwards of 20,000 acres.

In 1918 the acreage in seeds was approximately as follows:

Products	Acres	Products	Acres
Onion seed -----	6,882	Pepper -----	92
Sweet corn -----	304	Pumpkin -----	189
Tomato seed -----	735	Squash -----	179
Dwarf snap beans -----	2,696	Winter squash -----	667
Garden pole beans -----	4,989	Spinach -----	1,069
Garden peas -----	1,889	Cabbage -----	21
Turnip seed -----	107	Carrot -----	4,609
Sugar beet seed -----	739	Parsnip -----	255
Garden beet seed -----	2,459	Radish -----	3,345
Mangel beet seed -----	272	Lettuce -----	2,276
Cucumber seed -----	59	Parsley -----	155
Muskmelon -----	49	Celery -----	175
Watermelon -----	74	Salsify -----	123

The acreage devoted to flower seed was about the same as in 1917, though the acreage devoted to sweet peas was undoubtedly less.

#### THE NEW DRIED VEGETABLE INDUSTRY.

Dried vegetables, although not new to European countries, were practically unknown to this country until the advent of the war. There are now ten vegetable drying plants in California and Oregon, and more are under construction. A great impetus was given to the industry when the War Department contracted for \$1,000,000 worth of evaporated vegetables for use of the soldier abroad. In addition to the purchases made by the government, a strong and increasing demand has sprung up for the product.

The vegetables used for drying are practically all grown in the immediate vicinity of the drying plants, thus facilitating the picking and handling of the product and resulting in securing absolutely fresh stock. Owing to war conditions, the acreage formerly devoted to hops has been greatly restricted and these lands are now used for the growing of vegetables. Practically all of the vegetable drying plants were formerly hop driers, and very few changes were needed to adapt them to their new use.

In the drying plants are processed practically every kind of vegetable, fruit and berry suitable for dehydrating, and a vast superior quality of food is produced. The army is buying dried potatoes, carrots, and these products are packed in tin cans two of which form a crate easily handled by one man. The dried vegetables intended for use in the United States are packed in paper cartons, protected against moisture by waxed paper. California, with its long growing season, and climatic conditions conducive to large and superior crops, is admirably adapted to the growing and dehydration of vegetables.\*

The following is the approximate total production of the various and more important vegetables for the year 1918:

\*E. Clemens Horst.

Variety	Pounds	*
Potatoes -----	4,500,000	7
Onions -----	350,000	12
Carrots -----	200,000	10
Turnips -----	80,000	16
Spinach -----	80,000	20
Cabbage -----	25,000	20
Sweet potatoes -----	8,000	6
Celery -----	5,000	18
Rhubarb -----	10,000	20

\*In order to obtain the number of fresh pounds, multiply the dry weight by these figures.

The above figures include some products from Oregon and British Columbia, but about 75 per cent of the above were actually dried in California.

A large amount of the raw product, particularly potatoes, were bought outside and shipped into the state.

#### THE CORK INDUSTRY.

The cork of commerce is the bark of an evergreen species of oak (*Quercus suber*) tree, which reaches a height of about thirty feet. It grows in the south of Europe and north African coasts, but principally in Spain and Portugal.

The *Quercus suber* is long-lived and the quality of the bark increases with the age of the tree. Many trees in Portugal are known to be centuries old and their product has been gathered by families through succeeding generations.

There are many cork trees in the San Joaquin Valley, although none of them have been utilized for commercial purposes. Their great value lies in their beauty as shade trees and for ornamental purposes. M. Theo. Kearney planted a number of cork oaks on his magnificent estate near Fresno, which passed at the time of his death to the University of California. James Lick, founder of the Lick Observatory, grew cork oaks at his home place in Agnews and there are 200 trees, now five years old, at the George C. Roeding ranch near Fresno.

The cork oak has all the stately beauties of other varieties but has the added advantage of comparatively rapid growth. Cork oak may never be on a commercial basis in California but it grows well here and there is nothing to prevent some man with a deep vision into the future from founding a new industry.

The first stripping of cork from young trees takes place when they are from fifteen to twenty years old, and is known as "virgin cork," which is used only for tanning purposes, or for rustic work in ferneries, conservatories, etc. Subsequently the bark is removed every eight or ten years, the quality of the cork improving with each successive stripping, and the tree lives and thrives under the operation for 150 years and upwards. The produce of the second barking is still so coarse that it is used only for floats for nets, etc.

#### TAN BARK.

This oak (*Quercus densiflora*) is found in southern Oregon and southward to Mariposa County in California. The tree is also known locally as chesnut oak (*Quercus prinus*). This species grows from southern Maine to Maryland, and in the mountains south to north Alabama and Georgia, and west to Lake Erie, Kentucky and Tennessee.

The amount of oak bark used in 1905 amounted to 422,000 cords, valued at \$3,765,000.

## Value of Cork Imported Into the United States, 1912-1918.

Year	Value
1912 -----	\$3,242,319 00
1913 -----	3,152,070 00
1914 -----	3,851,794 00
1915 -----	2,762,895 00
1916 -----	3,134,884 00
1917 -----	3,870,389 00
1918 -----	3,061,827 00

*The Eucalyptus Industry.*—The Sydney Morning Herald, in an article urging the development of the eucalyptus industry as a means of employing returned soldiers, quotes a practical distiller in part as follows:

There are scores of different kinds of eucalyptus trees, but only a limited number (about six) are of any commercial value. The two most important varieties are the peppermint and the mallee. Good wages can be made by men working in a small way with either of those species, but anything attempted so far in a large way has not met with much success for many reasons—chiefly because of the difficulty and expense of obtaining large areas of land. With the two species mentioned large areas are necessary because the trees only grow in patches. Thus a distiller who holds a lease of 1,000 acres of land may only have 100 acres that are of any value to him. The mallee gives the best and most valuable oil for medicinal purposes. No mallee, however, can be very profitably worked unless the scrub has been first rolled down and burned. Suckers spring up very quickly after burning, and it is from these that the distiller gets his profit. The mallee is being rapidly killed out where the soil is good for wheat-growing purposes. Firewood is scarce for the same reason, and cartage is becoming more expensive as the cutters go farther afield. None of these disabilities would exist in an enormous belt of mallee in Riverina. There the repatriation authorities could settle a large number of men and bring into profitable use thousands of acres of crown lands at present considered absolutely worthless. The cost would be less per capita than any other means of repatriation so far proposed.

The greater part of imported cork comes from Spain and Portugal each supplying about half of the above quantities; that from other countries is very small.

## California Tanbark and Tanning Extract in 1909.

Description	Tons	Cost	Average cost per ton
Oak bark -----	36,005	\$714,146	\$19 83
Myrobalan nuts -----	620	20,470	33 02
All others -----	495	10,152	20 51
Totals -----	37,120	\$744,768	\$20 06

The average cost per ton in 1909 \$10.31, was 73 cents more than in 1908. The highest average cost per ton was reported by California, \$20.06. In the total quantity of bark, etc., used in 1909, eleven out of the twenty-one states showed gains over 1908, the greatest being 9,605 tons in California. Valonia, which is a product of *Quercus agrifolia*, and *Quercus agrifolia*, is the commercial name of the acorn cups of these species of oak, which has a higher percentage of tannic acid than any other known tannic material, containing as much as 40 per cent of acid. The value of tanbark and tanning material imported was \$2,849,553 in 1916, and 1,287,593 in 1918. The quantity of domestic bark for tanning exported in 1916 was 5,226 tons, valued at \$123,675, and in 1918 194 tons valued at \$5,857.

## PART VII.

## HORTICULTURE.

## FRUIT ORCHARDS AND VINEYARDS.

**Principal Counties in Orchard Fruits, Number of Trees and Vines; Apples, Apricots, Dates, Figs, Grapes, Olives, Oranges, Lemons, Raisins and Currants; Small Fruits: Persimmon, Pomegranate, Peach; Fruit Canning; Almonds and Walnuts; New Fruits: Avocado, Banana, Cherimoyer, Guava, Jujube, Loquat, Canned and Dried Fruits; Nuts; Imports and Exports of Fruit.**

## ORCHARD FRUITS, GRAPES, TROPICAL FRUITS, SMALL FRUITS, AND NUTS.

(From the Census Reports, 1910).

The acreage in fruits has never been ascertained. In comparing one year with another the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, which may vary largely owing to favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 31,502,000 bushels, valued at \$18,359,000. Plums and prunes, peaches and nectarines, apples and apricots are the most important of the orchard fruits.

The production of grapes in 1909 amounted to 1,979,687,000 pounds, valued at \$10,847,000, and the production of nuts was 28,378,000 pounds, valued at \$2,960,000. Most of the nuts were Persian or English walnuts and almonds.

The total value of the tropical fruits produced in 1909 was \$16,752,000, the value of oranges representing more than three-fourths of the total, and the value of lemons being next in importance.

In value of production among the orchard fruits, the peach ranked second in 1909. It has a wider range for possible growth than the apple, and is the greatest orchard fruit of the deciduous class produced in the state. California produces far more peaches than any other state, Georgia being second, but that state ships more fresh peaches. The nectarine is so similar to the peach as to be botanically classed as a variety of that fruit, it is even more difficult to grow than the apricot, and is produced almost entirely in California.

## Number of Trees and Vines in California in 1910.

(From the Reports of the Bureau of the Census.)

Crop	Bearing trees in 1910	Non-bearing trees in 1910	Total	Quantity, bushels, 1909	Value 1909

Totals -----		6,281	9,687	26,824,120	\$1,789,214

\*Less than 1 acre.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard and tropical fruits and grapes in 1909:

Product	Number of farms	Unit	Quantity, 1899	Produced, 1909
Cider -----	481	gallons	75,443	118,456
Vinegar -----	973	gallons	199,678	244,683
Wine and grape juice -----	2,163	gallons	5,492,216	16,005,519
Olive oil -----	78	gallons	8,445	95,955
Raisins and dried grapes -----	4,551	pounds	117,935,727	{ 169,210,679
Other dried fruit -----	8,373	pounds		

NOTE.—These figures do not include wine, grape juice, and vinegar made in regular wineries, nor olive oil made in regular factories.

Leading Counties in Fruits and Nuts.  
(Value of one million and upward in 1909.)

County	Value	County	Value
Los Angeles -----	\$6,731,000	Sonoma -----	\$2,034,000
San Bernardino -----	5,357,000	Ventura -----	1,795,000
Fresno -----	5,279,000	Santa Cruz -----	1,656,000
Santa Clara -----	4,234,000	Solano -----	1,495,000
Riverside -----	2,393,000	Placer -----	1,318,000
Orange -----	2,497,000	San Joaquin -----	1,307,000
Sacramento -----	2,265,000	Kings -----	1,219,000
Tulare -----	2,053,000		

## Total Value of All Crops, by Counties.

(Value of four million dollars and upward in 1909.)

(Compiled from the Reports of the Bureau of the Census.)

County	Value	County	Value
Los Angeles -----	\$14,720,000	Tulare -----	\$5,353,000
San Joaquin -----	9,082,000	Riverside -----	5,133,000
Fresno -----	7,991,000	Sacramento -----	4,720,000
Santa Clara -----	6,968,000	Sonoma -----	4,451,000
San Bernardino -----	6,818,000	Monterey -----	4,325,000
Ventura -----	6,751,000	Alameda -----	4,276,000
Orange -----	6,176,000	Contra Costa -----	4,032,000

NOTE.—These figures are for the value of crops only, and do not include wine and other products.

The three leading crops on the basis of value in California in 1909 according to the census reports were:

Crop	Acreage	Production	Value
Fruit and nuts -----			\$50,706,869
Hay and forage -----	2,533,347	4,327,130 tons	42,187,215
Barley -----	1,195,158	26,441,954 bushels	17,184,508

## CALIFORNIA FRUITS.\*

Year by year the area in fruit continues to expand in nearly all sections of the state.

## Apples.

Apple growing in California is widely distributed. From 100 to 500 acres or more of bearing trees occur in nearly every county in the state, but a very large proportion of the commercial crop is produced in two or three sections. The Pajaro Valley, which includes the southern part of Santa Cruz County and the northern part of Monterey County, perhaps more commonly called the Watsonville district, is the most important apple-growing section in California, the two counties named producing nearly 65 per cent of the entire crop of the state. The Sebastopol section of Sonoma County is the second largest district, that county producing about 16 per cent of the normal crop of the state, and is famous for the Gravenstein apple. In the southern part of the state Riverside and San Bernardino counties produce considerable quantities.

There are two distinct branches of the apple industry in California; one is the growing of early varieties, like the Astrachan and Gravenstein, which are grown mostly in the Sacramento Valley and foothills; the other, the production of winter apples. During the harvesting of the crop in the Pajaro Valley, this industry gives employment to several thousands. The annual shipments of green apples average from 3,500 to 4,000 carloads, and about 150 to 200 carloads of evaporated apples. The two leading varieties are Newtown Pippin and Bellflower. Others are the Red Pearmain, White Pearmain, Missouri Pippin, Baldwin, Rome Beauty, Spitzenburg, Winsap, Langford Seedling, and Ben Davis.

\*For imports and exports of fruits, see pages 209-220.

In the production of apples on the Pacific coast, California ranks second. According to the estimates of the United States Department of Agriculture the commercial crop for the last three years was as follows:

State	1916 (barrels)	1917 (barrels)	1918 (barrels)
Washington -----	3,225,000	4,620,000	4,296,000
California -----	1,918,000	1,174,000	1,127,000
Oregon -----	1,285,000	713,000	671,000

In 1918 the estimated tonnage for the Pajaro Valley proper or central section of the so called Watsonville District was 86,000 tons of commercial apples. Of this 61,700 tons were packed and shipped fresh, making 2,468 cars of about 1,000 boxes to the car; 23,100 tons were evaporated, making 3,300 tons evaporated apples and about 1,200 tons were used for canning and cider. The latter estimate for canning and cider stock is low, and might run close to 2,000 tons. These products were shipped from Watsonville station.

From the outlying sections of the Watsonville District, including the shipping points of Aromas, Vega, Aptos and Capitola, there was an estimated tonnage of 16,500 tons of commercial apples, of which 12,500 tons were packed and shipped fresh, making in the neighborhood of 500 cars averaging 1,000 boxes to the car; 3,500 tons were evaporated, making 500 tons of dried apples, and 500 tons were used for canning, cider and vinegar.

The growers received from \$20 to \$35 per ton green for their apples delivered at the packing houses, the average price being about \$27 per ton. The packers received from 90 cents to \$1.75 per box during the packing season, and later the prices advanced to \$2.75 out of cold storage, the average price for the season for all grades being in the neighborhood of \$1.25 f.o.b. Watsonville or shipping point. The total value of the crop and by-products was close to \$3,000,000.00.

In Sonoma County the apple crop was estimated at 550 cars of 600 boxes each; the price paid to growers ranged from \$1.50 to \$2.25 per packed box. There were also about 3,000 tons of evaporated apples shipped at prices varying from 10 cents to 15 cents per pound.

#### Apricots.

Last year's apricot crop is estimated as about 24,000,000 pounds. The principal drying varieties, especially through Santa Clara Valley and other large producing districts—the Blenheim—and in other outside districts—the Royal—were quite heavily planted and used for drying purposes—with some smattering of Tiltons. Other varieties produced in very small quantities.

#### Dates.

While date trees can be grown wherever the orange is grown, they will not properly mature in any except the hottest and driest portions of the state. According to Dr. J. Eliot Coit, pomologist, California Experiment Stations, the requisite conditions may be found in many places throughout the Imperial, Coachello, and Colorado valleys, and the

country around Palo Verde and Blythe, Riverside County. At other places in the state, such as the vicinity of Riverside, Redlands, Fresno, and Oroville, early dates might be grown in a small way for home consumption, or be sold in the fresh, uncured condition. While the new industry has a very promising future, it should be clearly borne in mind that date culture is a new industry, requiring experience and unusual skill on the part of the grower, and it must be carried out in regions having an extremely hot summer climate, and it must be remembered that to bring date palms into bearing costs very much more per acre than to grow any other orchard crop.

There are more than 500 named varieties of date palms, and 220 varieties have been tested out in this country by the Government Experimental Gardens and private parties.

Less than a dozen of the varieties now being tested seem to warrant planting in commercial quantities—the Deglet Noor, Itema, Tazizaoor, Hayana, Saidy, Ascherasi, Maktum, Horra, Thoory, and Agrass, being exceptionally desirable, while planting seed of the following, Deglet Noor, Menakher and Medjool is recommended.

The date has a real food value that is not understood by the uninitiated. The Arabs of the Sahara, as well as those of Arabia and Persia, use dates for more than one-third their food. Dates being 56 to 70 per cent sugar, preserve themselves and will keep indefinitely.

While of many varieties, dates may practically be classed as of three sorts—soft, dry, and semi-dry. The Deglet Noor is probably the best of the latter class. Dates are grown principally in the Coachella Valley, in Riverside County. The acreage of dates is so broken up into a number of small holdings that it is difficult to estimate the area, but it now amounts to several hundred acres.

The important feature now in the development of this new industry will be to get offshoots of good varieties. France has issued a decree prohibiting exportation of Deglet Noor offshoots to any countries, with the exception of Tunis and Morocco. This variety can not be secured anywhere else and such offshoots as can be purchased in this country will be very high in price. There is a question whether offshoots of any varieties can be secured from Egypt in the next three to five years. There are very few varieties from the Persian Gulf region that are worthy of propagation in this country, as very few varieties from Persia have been found that are resistant to the climatic conditions in the two valleys in the ripening season.

Thousands of seedlings are now beginning to produce fruit, and many of them are producing fruit of good quality, and a larger production is hoped for each year, as the seed is pedigreed pollination from selected males and results have been gained already that look very promising for the origination of new varieties here that will help to build up the industry and bring it to a commercial basis much sooner than could otherwise be accomplished.

There is no question but that there will be some very good varieties originated from the seedlings throughout the valley. But, on the other hand, for fruit quality that will sell on the market at good prices and that will carry long distances in the best of condition, the standard varieties such as Deglet Noor, Tazizaoor, Itema, will be the only ones that can be really depended upon until the seeding varieties are classified and standardized as to the quality and shipping resistance.

The Coachella Valley, it is claimed, will produce finer dates than the Imperial or Colorado valleys, owing to the humidity being less than in the other regions. Fruit of good quality for home use can undoubtedly be produced in a large part of the San Joaquin Valley, some parts of the Sacramento Valley, and a warm coastal region, such as that around San Diego.

There are only two methods for the propagation of the date palm, by seed and by offshoot. Seed may be planted from the best varieties, but with no assurance to the grower that he will get a large percentage of commercial dates. Fifty per cent of the trees grown from seed are male trees. These trees produce no fruit but do produce pollen-bearing flowers that the date grower must have in order to pollenate or fertilize the flower spikes when they appear on the female or fruit-producing palms. The grower therefore needs a few select male trees for this purpose.

Any lot of seedlings may afford a few fruiting trees of new and choice varieties which may be multiplied in number by offshoot propagation, and the cultivated varieties of the date world today are all the result of such seedling selection in the past.

The date palm can be grown in a wide range of soils, but it has been demonstrated by the Department of Agriculture and the date growers co-operating with the department that first-class dates can be produced only in the best of soils, which should be a loose, sandy loam, well drained.

The date industry at the present time looks very promising on the one hand while on the other it is rather discouraging that there is such a shortage in offshoots of standard varieties. Men of capital are ready to invest and start plantings of commercial date gardens, but there is no stock available and until there is the industry will probably advance very slowly.

The crop in 1918 amounted to 73,000 pounds or about 36½ tons. Of this quantity 23,000 pounds was from imported stock and 50,000 pounds from seedlings.

The Deglet Noor produced 60 per cent of the crop, the other varieties being Tazizaoot, Iteema, Maktum, and Rhars. Almost fifty per cent of the seedling dates were seeded and the pulp ground, making what should be a food product; however, confectioners prices were asked for the output and a large part remains unsold.

#### Figs.

The fig industry of California is annually becoming a more important crop. In 1884 the "White Adriatic" was introduced into Fresno County. Mr. Markarian planted the border of his vineyard to this variety, and ten years later packed figs in his raisin packing house.

The annual production of California, which is the only state that produces figs in commercial quantities, is approximately as follows, but the acreage is increasing rapidly, especially in Fresno County where an extensive acreage has been planted during the last few years. That there is a large and growing demand for this fruit is proved by the size of the imports.

## Estimated Production of Figs in 1916.

	State	Fresno County
White Adriatic .....	5,000 tons	3,800 tons
Smyrna figs .....	600 tons	400 tons
Black Mission .....	300 tons	100 tons

In 1918 the early rains did much damage to figs, reducing the crop to about 9,200 tons.

The prices paid to growers in 1917, and the prices quoted for the 1918 crop are as follows:

	1917	1918
Climyrna or Smyrna figs.....	8¢ to 12½¢	12½¢ to 19¢
Adriatic .....	5¢ to 7½¢	7½¢ to 15¢
Mission .....	3¢ to 5¢	5¢ to 8¢

“There are an endless number of varieties of figs. In many instances, on account of the wide distribution of this fruit throughout the world, the same variety may be blessed with any number of synonyms. This is the case with many sorts grown in California today. Not over six varieties comprise the list of commercial varieties for all purposes in California.

Many of the countries whose shores are washed by the Mediterranean sea are producers of figs commercially, but the recognized fig center of the world today is in the Meander Valley, about forty miles distant from Smyrna, Asia Minor. It is here that the Smyrna fig of commerce has been grown for centuries, and the secret of their culture was so closely guarded. It was only after fourteen years of constant and persistent effort on my part that I succeeded in 1890 in producing the first Smyrna figs in the United States by artificial pollination, and ten years later, having succeeded in establishing the *Blyastophaga grossorum*, with the assistance of the United States Department of Agriculture, the first Smyrna figs were produced in a commercial way.

The first figs introduced in the United States were brought as nearly as can be determined by the Spanish adres from Mexico in 1769. They were planted at the San Diego Mission. This fig is still a standard in California.

The fundamental difference between the Adriatic and Smyrna class of figs is that the former matures its fig without the fig wasp, while the latter does not. The Adriatic figs seem to possess all the qualities of the Smyrna so far as general appearances go, but on investigation it will be found that all the seeds are hollow, while in the Smyrnas each seed contains a gernel, giving the fig a nutty flavor and a delicious syrupy sweetness found in no other fig.

The great interior valleys of California, with their favorable climatic conditions (there being no rain in the summer months, and the air being both warm and dry), present possibilities which are not equaled in any other part of the world. The output of Smyrna is in the neighborhood of 30,000 tons annually. California produces about 10,000

tons of dried White Adriatic, Mission, and Calimyrna. The United States imports from 16,000 to 20,000 tons annually. The demand for figs for shipping, preserving and drying is growing by leaps and bounds, and it is up to the growers to embrace their opportunities and engage in this, one of California's most promising industries."\*

#### TABLE GRAPES AND ALMERIA GRAPES.

##### Table Grapes.†

The principal localities in the state from which table grapes are shipped are the counties of Sacramento, Placer, El Dorado, San Joaquin, Merced, Madera, Stanislaus, Fresno, Kings, Tulare, San Diego and Imperial. Other counties shipping in limited quantities are Sutter, Contra Costa, Yuba, Colusa, Santa Clara, Los Angeles and Yolo.

##### Table Grape Production.†

Absolutely accurate figures as to the number of carloads of table grapes produced in California and sold as such are not obtainable. A systematic investigation at many shipping points and a thorough checking of carload shipments in the general offices of the Southern Pacific, Santa Fe and Western Pacific railroads discloses the fact that a total of 18,189 cars of grapes were loaded in refrigerator service for transportation out of the state. Of this total number it is estimated that 6,000 were wine grapes shipped and sold as such, leaving 12,189 carloads of table grapes sent out of the state. It is generally estimated that 1,000 cars of table grapes are consumed in California or sent out of the state in small express shipments; so, therefore, the most intelligent estimate we can make of the number of cars of table grapes produced in the state is 13,189 cars.

The estimated average price received by the grower for a carload of grapes packed and loaded at the shipping point is \$1,250. On this basis table grape growers received for their table grapes \$16,487,250.

The viticultural industry in the state in all three branches has, therefore, brought to the producers of the grapes the annual income of \$46,220,250 for the year 1918.

##### Grape Packing in Redwood Sawdust.

In 1906, Professor A. V. Stubenrauch, Pomologist, and C. W. Mann, Assistant Pomologist in Fruit Transportation and Storage Investigations, United States Government, began a series of experiments in California covering the correct packing and storage of California grapes. Their investigations continued over a period of seven years, during which time all sorts of packing materials and styles of package were experimented with, resulting finally in the discovery that redwood sawdust was as perfect a medium for the preservation of the fruit as could be found. Their experiments in this direction were encouraged undoubtedly by the fact that for many years in Spain grapes have been packed in sawdust for shipment to England and other points, enabling the growers to successfully place upon these markets even the most tender varieties. In that country the ordinary pine sawdust is the only kind available, and in order to drive away the resinous flavor which

\*Roeding's Fruit Growers' Guide, Fresno, 1919.

†Report of the State Viticultural Commission, 1919, Bulletin 13.

might affect that of the grape, it is customary to expose the sawdust in great heaps to the sun of the summer and the storms of the winter, turning the heaps occasionally until all of the sawdust has been so exposed. This process is continued for not less than three years, at the end of which time the material is ready for use.

Several different kinds of pulverized redwood were used, including the dust from planing mills, fine shavings, etc., but the final conclusion was that coarse redwood sawdust, which has been run through a blower, to take out the fine particles and the dust, and a revolving drum, to smooth off the sharp corners and edges, was the ideal material.

Experimental packing with sawdust has been tried with practically all the European varieties grown in California, but the greatest success has been achieved with the Almeria, Cornichon, and Emperor. Undoubtedly there are a number of other varieties less well known and having thick skins that would keep equally well.

It has been found that sound grapes, well selected, of perfect color and maturity, will keep well for from one to three months. There are some examples of perfect keeping for as much as five months, but as a general rule it is safe to say that fruit so packed will be in the best condition for sale and consumption during the holidays, and more or less chance will be taken if it is longer held.

The Emperor season usually opens about the middle of September, and continues, in the ordinary year, to nearly the first of November. With fruit as commonly packed, immediate consumption is necessary, but with the sawdust packing, it is seen that the selling season can be extended for two or three months, making possible far better distribution, and by limitation of daily offerings enabling the dealer to realize much better prices.

No considerable quantities of grapes were packed in this way for shipment until 1912, when approximately thirty carloads were forwarded. Since that time shipments have constantly increased. Generally speaking, this style of pack has been found exceedingly satisfactory.

#### Almeria Grapes in Australia.

Almeria grapes are another fruit that we ought to be able to produce in California under suitable conditions, but the attempts made have not yet proved successful. Both the Almeria grape and Greek currants are grown with success in Australia, and the Government Viticulturist of Victoria, Australia, expresses his surprise at these conditions, saying: "I note that you still import over a million dollars' worth of Greek currants. It seems strange that you do not grow any locally, as the Zante currant should do well in the California climate. It thrives admirably in the irrigation districts of Northern Victoria, yielding as much as three tons of dried currants to the acre, whereas the Sultana, which also does very well with us, rarely exceeds two tons.

"You refer to the vine as 'a peculiar dwarf grapevine.' It could, of course, be trained thus, but here we grow it on very large trellises, planting the vines as much as 15 feet apart. The Zante was not a success here until cineturing, or ringbarking, was introduced a dozen years ago. This operation is performed on the main stem during, or immediately after, blossoming. Without it the bulk of the fruit drops off. Since

cineturing proved a success the Zante was very extensively planted, and we now produce more currants than the commonwealth can consume.\*

"I am rather astonished that the Almeria grape has not proved satisfactory with you, since it is doing splendidly with us. You may, perhaps, have seen some Victorian-grown Ohanez grapes (the Almeria variety) at the Panama Exposition. It keeps here in good condition for six months and over in cool store. It has occurred to me that a peculiarity in its method of fruiting may have something to do with its non-success in California."

A Bulletin issued by the United States Department of Agriculture on the raisin industry confirms this view regarding Greek currants. It states in part: "Currants have not so far been grown to any great extent in this country, not because they will not thrive here, but no one has engaged in their culture seriously enough to determine the right way to grow, prune and train them. \* \* \* The Department of Agriculture for some years has made experiments in the growing of currant varieties of grapes on different resistant stocks and practiced on them different methods of pruning and training, with very gratifying results, and strong hopes are entertained of starting and developing this special line of the raisin industry. There seems to be no reason why this country should not produce the 35,356,000 pounds, or \$1,206,000 worth of currants it has for ten years been annually importing."

#### IMPORTED ALMERIA GRAPES.

These table grapes come from the province of that name in Spain. They come into competition with late-season shipments of California Tokays, Cornichon and Emperor grapes. Cuttings of the Almeria grape have been imported into California, but the result so far has not been satisfactory.

The season for importations is from September 15 to December 15, the bulk of which is received at New York, although about one-fifth go through Boston, Philadelphia and New Orleans. The fruit is put up in barrels, the gross weight, including cork-dust, being from 60 to 70 pounds, and the net weight of a barrel about 45 pounds. California Malagas come in the most direct competition with Almeria grapes, being of a similar color and somewhat similar flavor, although not near as good as a keeper.

#### Almeria Grapes Imported, 1908-1918.

(Duty, 25 cents per cubic foot capacity of barrel or packages.)

Year	Cubic feet	Value	Year	Cubic feet	Value
1908 -----	2,234,508	\$2,743,356	1914 -----	1,334,163	\$1,599,969
1909 -----	1,203,419	1,575,620	1915 -----	1,323,928	1,523,547
1910 -----	1,365,310	1,682,994	1916 -----	623,856	703,274
1911 -----	1,485,159	1,723,022	1917 -----	1,402,446	1,656,609
1912 -----	2,000,841	2,331,504	1918 -----	556,558	648,093
1913 -----	1,135,942	1,359,415			

\*This system has frequently been recommended during the past year in California as a new discovery, but the above description was published in this report in 1916.

#### THE PERSIMMON.

The persimmon of the Southern States was introduced into California in early days. The widely distributed species, however, is the Japanese, of which many varieties are now fruiting in different parts of the state. Perhaps the largest single persimmon-producing proposition in California is that of Ira Avery in Placer County. The Tane Nashi variety pays best on account of its size and earliness.

In this country there are but two varieties in cultivation, viz.: the American and Japanese. The latter, on account of their attractive appearance and large size, are destined to be extensively planted as soon as their commercial importance is more appreciated. The impression that the fruits must be on the verge of decay before they can be eaten has militated against their sale. There is much variation in the character of the fruit. Some varieties are not astringent at all and are edible in early autumn, while still hard and green.

Persimmon culture commercially centers in Japan. California offers great possibilities in the culture of this most delicious fruit. It will adapt itself to a wide range of localities. The fruit will very often hang on until January, providing there have been no heavy frosts and a tree loaded with this deep russet, golden fruit is a sight to behold when all the leaves are off.

#### THE JAPANESE OR KAKI PERSIMMON.\*

The Kaki or Japanese persimmon was introduced into California about 1870, and is to be found to a greater or less extent in nearly every county in the state. The tree is easily grown, is practically free from serious diseases and insect pests, and is in most cases exceedingly prolific. The fruit is very attractive in appearance, ships well to both local and distant markets, and is almost universally liked if eaten in the proper condition. There are commercial orchards in Orange, Los Angeles, Tulare, Fresno, Santa Barbara, Solano, and Placer counties. During several seasons past, the fruit has been shipped to the East in carload lots, especially from the Newcastle district, where the largest acreage is to be found.

Although the persimmon tree is deciduous it does not thrive in a cold climate, and some of the first trees brought to the United States died from being planted too far north.

The culture of persimmons on a large scale is hardly advisable at present. For five- and even ten-acre orchards there are possibly good prospects of profitable returns, if anything like the care and attention are given to the trees, the handling and marketing of the fruit as are given to prunes, peaches, or walnuts.

#### THE POMEGRANATE.

This fruit is grown in various parts of the state, and certain quantities are profitably sold. The variety chiefly cultivated is a bright orange color, but a large number vary with a faint blush to dark red. The fruit ripens in the warmer parts of the state in October. Pomegranates for Eastern shipment have proved profitable in the Porterville district. The only hindrance to a rapid extension of pomegranate planting in California is the lack of market demand.

---

\*From the article by Professor Ira. J. Condit, University of California.

## PEACHES AND NECTARINES.

In the production of peaches, California leads all other states, large quantities being dried and canned, and in the shipment of fresh peaches is only exceeded by Georgia. Magnificent nectarines are grown, but in comparatively small quantities. In 1918 the production of dried nectarines was probably only about 25 per cent of the output ten years ago. Only about 50 tons were handled by the Peach Growers' Association.

## Shipment of Ripe or Green Peaches in 1914 by Ten Leading States.

The 10 leading states in the shipment of peaches in 1914, each showing shipments of more than 1,000 carloads, were as follows:

State	Carloads	State	Carloads
Georgia -----	4,803	Colorado -----	2,075
California -----	2,983	West Virginia -----	1,978
Washington -----	2,501	New Jersey -----	1,556
Ohio -----	2,340	Utah -----	1,556
Michigan -----	2,266	Maryland -----	1,231

## California.

Now that the California peach growers have organized with a membership of six thousand, and \$1,000,000 capital, controlling 85 per cent or more of the tonnage in the state, the industry is on a sound basis, and the prices obtained have been satisfactory to the growers. In 1916 the crop amounted to about 29,000 tons.

The average price to the grower for the 1916 crop was about 100 per cent greater than the average price for the 1915 crop. It must be borne in mind, however, that during the year of 1915, peaches reached the lowest price known to the industry. Taking, however, a period of five years, the current price for the 1916 crop is probably not over 10 or 15 per cent above the average for that length of time.

The production of dried peaches in 1917 was between 38,000 and 40,000 tons. The quality was not as good as in either 1915 or 1916, and the crop as a whole ran to smaller grades, but was the largest ever produced in California, and notwithstanding this fact, the entire crop was marketed by February 1, 1918. The quality of the peach itself was not as good as either of the two previous years.

The maximum price received by the grower for the 1914-1915 crops, before the Peach Association was organized, was 3 cents a pound in the sweat box. The average for the 1916 crop was a little better than 6 cents, and for the 1917 crop a fraction over 8 cents a pound. The minimum prices paid growers for these two crops were 5 and 6½ cents.

The 1918 crop production was a total of 20,000 tons, of which about 60 per cent was Muirs and 40 per cent other varieties of Yellow Freestone peaches.

The grading of the crop as a whole ran as follows:

Grades	Yellows	Muir's
Standard -----	0.11	0.20
Choice -----	.39	.47
Fancy -----	.29	.22
Extra fancy -----	.19	.09
Slabs -----	.02	.02

The patented peeling device proved an unqualified success, and will do more toward the promotion of the dried peach industry than anything that has been advocated to the present time, as with all the fuzz and practically all the peeling removed it is certain to popularize the dried peach. This has been proved during the past year, as over 60 per cent of the peaches sold to the trade last season was of the peeled variety.

#### Peeled Peaches.

A peeling process for dried peaches on which a patent has been granted to the California Peach Growers Association, giving them the sole right to use this process, and the first year's operation proved a great success, one-fifth of the entire crop being marketed in this form.

#### The Prune Crop in 1918.

The California Prune and Apricot Growers' Association incorporated three years ago has a capital of \$2,500,000 and a membership of 6,000.

Possibly about 75,000,000 pounds of prunes were handled out of the 1918 crop; that the growers all received a certain price fixed more or less by the Food Administration as a maximum price to be received by them for the season.

Since Association growers in their membership become both growers and packers and sellers of their goods to the trade, they were entitled to the further profits that might accrue to the Prune and Apricot Growers' Association, and as such received on the grades between 30 point to 100,  $\frac{1}{4}$  cent greater than the government price; on grades between 100 and 120,  $1\frac{1}{4}$  cents more than the government price; and on grades from 120 up,  $\frac{1}{2}$  cent greater than the government price. On the one very large grade of 0-30's they received  $\frac{3}{10}$  cent greater than the government price. The government prices were:

For 20-30's -----	15 ¢ a pound
For 30-40's -----	10 ¢ basis
For 40-50's -----	9½ ¢ basis
For 50 to 80 point -----	8½ ¢ basis
For 80 to 100 point -----	8 ¢ basis
For 100 to 120 point -----	4½ ¢ a pound
For 120's and up -----	4 ¢ a pound

Large portions of damaged goods were sold by the growers to the packers at prices ranging from the very topmost government price down to as low as  $1\frac{1}{2}$  cents per pound.

## FRESH DECIDUOUS FRUITS.

The shipments of deciduous fruits in 1918 far exceeded all previous years.

Statement Showing Number of Cars of Each Variety Shipped, 1908-1918.

Year	Apricots	Cherries	Grapes	Peaches	Pears	Plums	Apples*	Miscellaneous	Total
1908 -----	232	208	3,819	1,980	2,702	1,763	2,201	15	12,920
1909 -----	210	250	5,880	2,599	2,633	1,526	2,158	19	15,280

## OLIVES AND OLIVE OIL.†

There were very few new orchards planted in olive trees during the years 1905-1909, consequently the production of olive oil changed but slightly. The orchards that are coming into bearing are mostly varieties that are used for pickling purposes, and the production of pickling olives is increasing considerably from year to year. Since 1909 a large area has been planted. The production of olives during the last few years has increased by improved methods of irrigation and fertilization, and the industry is growing in importance, and new planting is on a considerable scale. The production is about equally divided between southern California and the territory north of Tehachapi. The harvests in California generally alternate between heavy and light, although the last few years the crops have been more uniform, due to the increased care and attention to orchards.

Not more than 35 gallons of oil are produced from a ton of olives, although some manufacturers, who have heavy presses, claim to obtain 40 gallons of oil to the ton. It takes about five and one-half pounds of olives to make one gallon of pickles. The output of pickled olives is increasing much more rapidly than the production of olive oil, as California manufacturers can not compete with foreign oil as to price.

The leading varieties now being planted in California are the Mission and Manzanillo, all other olives generally being treated as oil olives, as they are unfit for pickles.

In 1911 it was estimated that there were 18,000 acres of olives, producing about 8,000 tons of oil olives, and 4,000 tons for pickling. In 1907 the average net income was only \$17 an acre; in 1912 the average had increased to \$36.88 an acre. In 1908 the olive industry represented capital invested amounting to \$4,500,000, increased in 1912 to \$7,500,000. Formerly the by-products were more or less wasted; now oil, described as "mechanical oil," is extracted from the pomace and used to a large extent by soap and other factories. The average yield per acre in California is about one and one-fourth tons, and the average price

\*In no case do the above figures cover the entire shipment of apples, as they continue to be shipped long after the deciduous fruit season is closed.

†For further information regarding olives and olive oil, see the Report for 1913, pages 114-115.

received by the growers for the three years, 1909-1912, for oil olives on the trees was \$22 per ton. Forty per cent of the olives produced are pickling olives, and 60 per cent oil olives. The average price received by growers 1909 to 1912 for pickling olives on trees was \$62 per ton. The net average receipts by growers for pickling olives was \$53.50 per ton, and the net average receipts for both oil and pickling olives \$36.88 per acre. The amount paid to growers in 1911, for approximately 12,000 tons, was \$442,000; of this tonnage 4,000 were pickles, representing 1,200,000 gallons, and 8,000 tons of oil olives representing 280,000 gallons of oil.

It is exceedingly difficult to obtain reliable figures regarding olives and olive oil.

The prices paid for olives in 1917 were as follows:

Size	Price per ton
10/16 inch in diameter.....	\$40 to \$60
11/16 inch in diameter.....	100 to 150
12/16 inch in diameter.....	175 to 200
13/16 inch in diameter.....	200 to 250

Olives running less than 10/16 of an inch in diameter, and olives of larger size, but unfit for pickling by the California process, brought from \$40 to \$80 a ton. In some cases \$125 to \$160 per ton was paid for olive orchards run on the trees.

In 1918 the acreage and production of olives was estimated as follows:

Bearing acreage .....	22,346
Non-bearing acreage (including 1,659 acres planted in 1918).....	15,369
Total acreage in state.....	37,715
Estimated production (1918)—	
Pickling olives, tons.....	7,000
Oil olives, tons.....	2,000
Salt-cured olives, tons.....	2,300
Total tonnage .....	11,300
Prices paid growers—	
Pickling olives (average), ton.....	\$155
Salt-cured olives (average), ton.....	140
Oil olives (average), ton.....	75

It should be understood, in connection with the figures given for "Oil Olives" above, that this production of 2,000 tons is made up quite largely of pickling varieties, the fruit of which is of such size (very small) and condition (bruised or otherwise damaged) that it can not be used for ripe processing. As to the purely oil varieties of olives now being produced in this state, the quantity is becoming less each year due to the "working over" of these trees to the pickling varieties, and because these oil varieties are no longer being planted anywhere in California. This is because there is almost no profit in making olive oil under such conditions as prevailed before the present olive oil shortage.

In figuring the output of the olive crop in cases of ripe olives and gallons of olive oil, allow 60 cases of 24 quarts each to the ton of fruit, and 38 gallons to each ton of fruit for olive oil. The salt-cured olives shrink about one-third in processing. The figures given for this item take into account the weight of the fruit before processing.

The leading counties in the production of olives are: Los Angeles, Riverside, Santa Barbara, San Bernardino, and San Diego in the south, and Butte and Tehama in the north, Santa Clara, Tulare, Fresno, Sacramento, and Sonoma in central California. There are large and modern plants for making olive oil and pickled olives at Oroville, Los Angeles, San Diego and Fresno. Butte is the largest producing county in olives, Tulare County being second.

#### MANUFACTURE OF OLIVE AND OTHER OILS.

The California act approved on April 25, 1862, for the encouragement of agriculture offered premiums for cottonseed and linseed oils. For the first 100 packages of 20 gallons of either of the above, \$1,000.00.

According to the reports received, there were 112 concerns in the United States in 1916 engaged in the manufacture of 262,558,661 pounds of oil from peanuts, mustard seed, kapok seed, rape seed, sunflower seed, soya beans, walnuts, corn, copra, palm kernels, and olives. The movement to grow soya beans, peanuts, and other oil-bearing seeds and nuts other than cottonseed for the manufacture of oil has received a great impetus and there will probably be several hundred establishments engaged in crushing the crops grown in the future. The following summary shows the number of establishments engaged in the production of the several oils, together with the quantity of each kind produced during the calendar year 1916:

Kind	Number of establishments	Oil produced (pounds)	Kind	Number of establishments	Oil produced (pounds)
Olive -----	22	1,336,674	Corn -----	23	93,085,391
Cocoanut -----	9	126,884,374	Mustard seed, rape seed, soya bean, palm kernel, etc..	14	15,087,853
Peanut -----	50	26,164,869			

The output of vegetable oils has greatly increased in the state during the last few years. The Globe Oil Mills, the largest in California, produced the following quantities during the calendar year 1918:

Variety	Pounds
Cottonseed -----	4,777,790
Soya bean -----	542,247
Cocoanut -----	53,616
Sesame -----	151,481

#### THE CITRUS FRUIT INDUSTRY.

The citrus fruit industry has reached its present development in southern California, which is made up largely of San Bernardino, San Gabriel, and San Fernando valleys, and in the coast region in Orange

and Los Angeles counties. There are smaller but less favorable regions in Santa Barbara and Ventura counties, close to the mountains, and in San Diego County oranges have also been cultivated from an early period, and as far as Butte County in the north, and Tulare, Fresno, and Kern counties in central California. Most of the oranges in California are now of the Washington Navel variety, the remainder comprising the Valencia Late as the most important variety, with fewer of the St. Michael, Mediterranean Sweet, Thompsons, Ruby, Blood, Jaffa, Seedlings, and Tangerines.

The orange crop of northern California matures from four to six weeks earlier than it does in the southern part of the state, notwithstanding the fact that it is from 200 to 500 miles farther north. This unusual condition is due to the topography of the Pacific coast. The two large San Joaquin and Sacramento valleys in central and northern California lie between two great mountain ranges extending north and south. The Coast Range mountains shut off the modifying influences of the sea, causing relatively higher night temperatures during the summer months than prevail in the southern part of the state.

In southern California, San Bernardino is the largest producer of oranges; Los Angeles, Riverside, and Orange counties follow in the order given. In northern and central California, Tulare leads, with Butte, Fresno, Kern, and Sacramento counties being next.

The commercial varieties of oranges are the Washington Navel, Valencia Late, Satsuma, and Tangerine. Other varieties are Ruby Blood, Mediterranean Sweet, St. Michael, Joppa, and Dancy's Tangerine. Some idea of the size and value of the crop, and of the immense benefit derived by growers by a well-organized association, is shown by the results obtained by the California Fruit Growers' Exchange, the largest and most successful of all the cooperative institutions formed by the fruit growers.

The following tabular statement shows the total number of boxes shipped each year, the amount received, and the average f.o.b. California price per box during the last ten years:

Year	Boxes shipped	F. O. B. returns	Average per box
1908-09	8,710,828	\$13,958,990 00	\$1 60
1909-10	7,578,801	14,831,975 00	1 96
1910-11	10,842,790	20,708,355 21	1 91
1911-12	9,232,357	17,235,822 98	1 87
1912-13	4,940,068	13,640,091 32	2 74
1913-14	11,264,865	18,990,725 54	1 69
1914-15	11,893,076	19,523,397 72	1 64
1915-16	12,097,918	27,675,922 74	2 29
1916-17	15,492,334	33,478,130 63	2 16
1917-18	8,642,875	36,291,675 48	4 20

#### The Citrus Crop, 1917.

The great damage that was inflicted on California orange growers by the heavy frost which occurred the last week in December, 1911, and the first week in January, 1912, is shown in a striking manner by the returns of the California Fruit Growers' Exchange given above. This large decrease was in some measure made up for by better prices, the average being \$2.74 per box, against \$1.87 for the previous year.

The sales made by the Exchange during the last fifteen years have amounted to approximately \$262,000,000, on which business the losses due to bad debts, or in the transmission of the funds have been less than \$8,000, or about  $\frac{3}{1,000}$  of one per cent.

A careful estimate recently made places the production of oranges in California at 129 to 191 boxes to the acre, but there is considerable difference in the crop in various orchards.

During the year ending August 31, 1917, there were shipped from California 45,723 cars of oranges and grapefruit, and 8,107 cars of lemons, making a total of 53,830 cars. The Exchange shipped 29,828 cars of oranges and grapefruit and 6,398 cars of lemons, consisting of 12,733,550 boxes of oranges, 102,254 boxes of grapefruit, and 2,656,520 boxes of lemons. The amount of money returned by the Exchange to the shippers approximates \$33,478,000, which is nearly seven million dollars more than the largest preceding year, or an increase of approximately  $33\frac{1}{4}$  per cent. Using the Exchange returns as a basis for computing the value of the crop, the amount returned to California for the citrus crop equals \$67,500,000 delivered value of the entire crop.

On account of the heavier loading of cars the last two years due to the shortage of equipment owing to the war, the carload figures do not give a true comparison of the crop with other years. The average load of citrus fruit has been increasing each year because of larger cars and the increasing amount of fruit precooled by the shippers, which is always loaded heavier.

#### Citrus Crop, Season of 1918.

Due to a destructive and unprecedented period of extreme heat in June, 1917, California produced, during the year ending August 31, 1918, only about a 20 per cent Navel crop, a 47 per cent Valencia crop, a 71 per cent lemon crop, and a 70 per cent crop of miscellaneous varieties. For the crop year the total shipments of all varieties were about 38 per cent of the previous year.

Total shipments for the state amounted to 19,506 carloads of oranges and grapefruit, and 5,823 carloads of lemons, or a total of 25,329 carloads. Members of the Fruit Growers' Exchange forwarded 6,452,896 boxes of oranges and grapefruit, and 2,191,281 boxes of lemons, or 76 per cent of the state's shipments.

An excellent demand for citrus fruits prevailed throughout the year. There was no frost damage to the crops in California and the quality of all varieties was good. Navel shipments were completed two months earlier than usual, while the movement of Valencias was practically continuous throughout the year. Warm weather stimulated the demand for lemons when heavy supplies and the sugar shortage threatened the market.

The Valencia crop which is now normally half the size of the Navel crop, is likely to equal the Navel crop in a few years. The nonbearing acreage of lemons is 75 per cent as large as the bearing acreage.

The Navel orange crop in the early districts north of the Tehachapi suffered from the heat less severely than in Southern California. The movement was nearly 50 per cent of former normal years. The supply of Valencias on the market and the state maturity law delayed the start until about December 1, by which time the eating quality of the fruit was good and the crop moved out rapidly under an active demand.

Sizes were not abnormally large for the holiday trade.

The Southern California Navel crop was much lighter and sizes were undesirably large, although, owing to the fact that the rains came late, the fruit did not grow to the extreme sizes expected. With high prices and the small number of fruits per box the prices per dozen to the consumer were unusually high.

Sizes of Valencias ran medium to small, which was desirable from a selling standpoint, but reduced the number of boxes from early estimates. The shipments for the crop year were about 7,500 carloads, compared to approximately 16,000 carloads the previous season.

Under normal conditions the California Valencia production has increased to a point where the output is substantially one-half of the Navel crop. A normal crop is now double what it was seven years ago and there is a large nonbearing acreage.

#### Lemons.

Although lemons have been grown in California for half a century, it is only during the last 20 years that they have risen to considerable commercial importance. The lemon is less hardy than the orange and comprises from 10 to 15 per cent of the citrus crop.

The principal varieties of lemons grown in California are the Eureka; the Lisbon, imported from Portugal; Villa Franca, imported from Europe, and the Bonnie Brae, grown mostly in San Diego County.

The California lemon industry has been developed by small land-owners. There are a few groves which contain from 150 to 1,000 acres, but the average grove contains less than 10 acres.

Practically all imported lemons come from Sicily, where the production is very large. The imports into the United States in 1913 amounted to 151,416,412 pounds. Since that year only the value is given, which in 1914 was \$5,981,635.00, and in 1918 \$2,179,211.00.

#### The Lemon Crop.

As with oranges, the 1917-18 lemon crop was greatly affected by the heat wave in June, 1917. The matured lemons were literally cooked on the trees and the very small fruit shriveled and dropped off, except in the districts very near the coast. The medium size green lemons were not so generally damaged. The lemon shipments from September 1 to March 1 were about 60 per cent of the movement for that period in the two previous years. The fruit from the bloom following the heat damage then commenced to come up to size, and shipments have been gradually increasing and are now normal.

The lemon tree, unlike the orange, blooms continuously, so that an unfavorable climatic condition does not destroy the crop for the entire year.

The California lemon production has increased 282 per cent in the fifteen years ending August 31, 1917, and 45 per cent in the last five years. The increase has been constant, except where interfered with in 1913 by a severe freeze and this past year by heat, both of which conditions were unprecedented.

Except for California's production, Italy practically supplies the world with lemons. The present yearly consumption of lemons in the

United States and Canada, which is 13 lemons per capita, about equals the exports from Italy to all other countries.

#### Pomelo or Grapefruit.

The pomelo or grapefruit was formerly almost exclusively grown in Florida, but its cultivation has increased in recent years, and considerable quantities are produced in Riverside, Tulare, San Diego, and other citrus counties. The leading varieties are the Nectar, Imperial, Marsh, Seedless, and Triumph.

#### Citron of Commerce.

The citron of commerce was grown by the Missions in the early days, but now is cultivated only to a small extent in Riverside County. At one time there was a grove of 21 acres in Los Angeles County, but it was neglected and five years ago was replaced by orange, avocado, and other trees. At the present time there is only one orchard producing this fruit on a small scale, but it is reported as a success.

#### CITRUS BY-PRODUCTS IN CALIFORNIA.

During the last year or two considerable progress has been made with a view to utilize the cull oranges and others not suitable for sale. There are several factories where orange marmalade is manufactured. One plant is at Anaheim, and another is being established at San Dimas. At Redlands there is a factory that manufactures all varieties of citrus fruit products, essential oils, emulsions and orange juice. Orange peels in alcohol, and in brine, citrate of lime, tincture, and fluid extract of orange, lemon and grapefruit, syrup and dried orange and lemon peel.

The Exchange By-products Company, organized by the Exchange lemon shippers, has handled during the season of 1916-1917 over 5,100 tons of lemons not suitable for shipping. The season's production of high grade citric acid will exceed 175,000 pounds, which has found a ready sale. The company also manufactured and sold over 1,000 gallons of lemon and orange tincture and has carried on experimental work on several other products.

In 1918, the By-products Company has been handicapped by shortage of raw material due to the short crop and high value in the fresh state of any lemons which would carry to the markets. The manufacture of high-grade citric acid has been continued to the extent of the supply of lemons, and improvements in the processes have been developed by which a greater recovery of acid from the juice is accomplished. Experimental work on other products has been continued.

During the year a number of Fruit Exchange associations purchased a controlling interest in a company successfully manufacturing and marketing orange and grapefruit marmalade. Arrangements are now being made for the Exchange shippers generally to join in the movement, mutualizing the marmalade company and making it the nucleus to develop a by-product business to utilize the orange and grapefruit culls.

## CALIFORNIA ORANGE AND LEMON CROP, 1898-1918.

(Carloads.)

Season (year ending Oct. 31)	Southern California		Total carloads	Northern and Central California*		Grand total, carloads
	Lemons	Oranges		Oranges	Lemons

1917-18	6,197	14,346	20,543	2,773	140	23,456

\*Northern California shipments are from Butte, Placer and Stanislaus Counties, those from Central California from Tulare and Fresno Counties. Lemons and oranges not reported prior to 1902-03 and not shown separately until 1909. The number of boxes per car of oranges and lemons has varied considerably, as the size of cars in recent years has increased. In 1904-05, and prior to that date, oranges averaged about 374 boxes and lemons 313 boxes to the car.

†Including lemons.

## TOTAL CARS AND BOXES OF ORANGES AND LEMONS SHIPPED FROM CALIFORNIA, 1903-1918.

Year ending October 31	Oranges		Lemons		Total	
	Cars	Boxes	Cars	Boxes	Cars	Boxes
1903	21,080	8,094,720	2,649	826,500	23,729	8,921,220

## THE FLORIDA CITRUS CROP.

Florida is at present the only competitor with California in the United States in the production of oranges, although in recent years citrus fruits are being produced on a small scale in Arizona, Louisiana, and Texas.

## Florida Citrus Trees in Bearing, 1890, 1900, and 1910.

(From the Bureau of the Census.)

	1890	1900	1910
Orange -----	2,725,272	2,552,542	2,766,618
Lemon -----	85,052	22,691	11,740
Lime -----	17,089	41,741	45,369
Pomelo -----	3,135	117,336	656,213
Citron -----	2,480	-----	23,234

Florida first took the lead in the production of citrus fruits in this country, but the "great freeze" of December, 1894, and February, 1895, when the temperature at some places fell to 14 and 18 degrees, was a disaster from which they are only now fully recovering. From 6,000,000 boxes shipped before the frost, the number fell the following year to 75,000.

## Orange and Lemon Crops of California and Florida, 1909-1910.

Orange and lemon trees of bearing and nonbearing age in 1910, and number of boxes of oranges and lemons produced in 1909, together with the value thereof, 1910:

	California	Florida
Oranges—		
Number of trees of bearing age, 1910-----	6,615,929	2,766,618
Number of trees of nonbearing age, 1910-----	2,093,101	1,097,896
Number of boxes produced in 1909-----	14,436,424	4,852,967
Value, 1909 -----	\$12,952,291	\$4,304,987
Lemons—		
Number of trees of bearing age, 1910-----	927,130	11,740
Number of trees of nonbearing age, 1910-----	376,859	7,329
Number of boxes produced in 1909-----	2,715,974	12,367
Value, 1909 -----	\$2,925,759	\$13,753
Pomeloes or grapefruit—		
Number of trees of bearing age-----	43,427	656,213

## Florida Citrus Fruit Crop, 1898-1918.

Season	Oranges, boxes	Lemons, boxes†
1898-99	1,250,000	2,200
1899-1900	972,589	1,447
1900-01	1,350,700	1,900
1901-02	972,589	1,447
1902-03	1,465,306	5,185
1903-04	1,950,823	4,131
1904-05	2,363,058	14,433
1905-06	2,961,195	8,299
1906-07	2,899,390	10,065
1907-08	3,793,126	6,718

Season	Oranges, boxes	Average price per box	Total value
1908-09	4,634,000	\$1 56	\$7,229,040
1909-10	6,100,000	1 34	8,174,000
1910-11	4,600,000	1 65	7,590,000
1911-12	4,750,000	2 22	10,497,000
1912-13	8,125,000	1 96	15,925,000
1913-14	7,946,926	1 83	14,541,180
1914-15	9,700,000	1 42	13,774,000
1915-16	8,370,000	1 96	16,405,200
1916-17	7,649,049	2 01	15,678,000
1917-18	5,581,309	3 46	19,030,000
1918-19	8,407,680	4 25	35,732,640

†The figures since 1908 include lemons, the quantity being so small that separate records are not kept. Limes, grapefruit, and tangerines are also included.

Lemons are no longer grown commercially, but the number of limes is rapidly increasing.

In 1916 the Florida growers adopted five varieties of ranges as standard, viz: Parson Brown, Homosassa, Pineapples, Valencias and Lue.

## THE CALIFORNIA RAISIN INDUSTRY.‡

One of the largest and most important branches of fruit growing is the cultivation of the raisin grape, the acreage in which is now by far the largest in the world.

Raisins were first produced on a considerable scale in the southern part of the state, but Orange and Riverside counties no longer produce raisins; Los Angeles County very few; Yolo County, which at one time produced Sultanas and Thompson's Seedless in considerable quantities, now finds it more profitable to ship a large portion of the crop as table grapes, while the vineyards in Riverside and San Bernardino counties are nearly all in wine grapes.

## Counties Where Raisins Are Produced.

Of the fifty-eight counties in California, less than a dozen produce raisins in commercial quantities.

When raisins were first shipped East in any quantity it is impossible to say. In 1875, New York reported that up to November 1, 6,000 22-pound boxes of California raisins had been received. About 1888 Fresno appears to have shipped a considerable quantity for the first time.

‡For the early history of the raisin industry in California, see Reports for 1911 and 1912.

The California Associated Raisin Company of Fresno now controls almost the entire acreage in raisin grapes, or upwards of 90 per cent of the total acreage in the state, the contracts signed in 1916, which run for six years, amounting to 154,833 acres, as follows:

Varieties	Acres
Muscats .....	97,667
Thompson's .....	35,725
Sultanas .....	7,835
Malagas .....	12,259
Feherzagoes .....	1,281
Black grapes .....	66
Total .....	154,833

The varieties of raisin grapes are few in number. The Muscat of Alexandria and the Muscatel Gordo Blanco hold the first place, while Malaga and Feherzagoes are used to a small extent; the seedless varieties are Thompson's Seedless and Sultanas, and the Zante currant.

The Malagas do not represent a great deal in raisin tonnage, as a large proportion of them are shipped green as table grapes.

Owing to the war the imports of Sultanas or Seedless raisins from Smyrna, in Asia Minor, which used to be an important item, amounting in 1906 to upwards of 7,000,000 pounds, fell in 1915 to 1,056,000 pounds, and in the last three years none were imported.

The following figures of the raisin crop 1913-1918 shows the quantity packed by the California Associated Raisin Company. About 90 per cent of the crop is controlled by the company, but the balance is packed by firms outside the Association, so their pack must be added to these figures to arrive at the total crop.

#### THE RAISIN CROP OF 1918.

The production of raisins was considerably larger than ever before in the history of the industry in California. This was due to the tremendous crop in the Fresno and Tulare sections and in spite of the fact that the production in Sutter County in the northern part of the state was scarcely twenty-five per cent of normal. Frost early in the year did a great deal of damage to the vines and curtailed the setting of the fruit and rains in the early fall did additional damage.

The Muscat variety suffered most from the rains, because they were on the trays and in the field in the sweat boxes when the storms came early in October. There was no chance of salvage through the wineries locally because federal regulations prevented the manufacture of commercial brandy and even fortifying brandy was limited in production because of the very small sweet wine output and the large government tax attached to its production and sale. Raisin growers, therefore, devoted their time to either drying artificially or to turning the raisins on the trays frequently in an endeavor to prevent the molding and

rotting of the raisins. To a considerable extent they were successful, and no matter what the damage was the prices were high and the goods were eagerly bought at prices that yielded good profits to the growers.\*

Varieties	Price, per ton
	1917
Muscats .....	\$97 04
Thompson's .....	137 73
Sultanas .....	1,130 89
Malagas .....	72 85
Feherzagos .....	71 57
Valencia .....	

In 1918 the prices realized by the growers on the bases set by the United States Government of  $5\frac{1}{2}$  cents per pound for Muscats,  $6\frac{3}{4}$  cents per pound for Thompson Seedless,  $6\frac{1}{2}$  cents per pound for Sultanas, and the estimated price of  $4\frac{1}{2}$  cents for sundry raisins netted the growers a sum of \$19,743,750.00.

Estimated Production by Varieties, 1913-1916 (Pounds).

Varieties	Crop, 1913	Crop, 1914	Crop, 1915	Crop, 1916
Muscats .....	98,588,798	120,000,000	157,246,000	178,000,000
Thompson's Seedless .....	18,390,922	36,000,000	23,330,000	47,000,000
Sultanas .....	12,252,430	18,000,000	11,190,000	14,000,000

<sup>1</sup>Includes about 9 tons of Thompsons from Yuba County, the vineyards in this county being nearly all nonbearing, having been planted only in the last two or three years. In 1916 Yolo County reported 200 tons of Muscat raisins, 200 Thompsons, and 800 tons of Sultanas.

Fresno is far beyond all other counties in the production of raisins of all varieties, but Sutter County has more bleached Thompson's than Fresno County.

\*Of this quantity 990 tons were Malagas, 1,769 Feherzagoes, and 63 tons Valencias, or 2,822 tons.

## California Seeded Raisin Industry, 1898-1918.

Fresno County is the center of the seeded raisin industry, where it originated.

Year	Tons	Year	Tons
1898	7,000	1909	28,000
1899	12,000	1910	31,500
1900	14,000	1911	33,000
1901	14,000	1912	43,000
1902	16,000	1913	49,000
1903	18,000	1914	35,000
1904	18,000	1915	50,000
1905	21,000	1916*	96,400
1906	24,000	1917*	82,900
1907	26,000	1918*	40,000
1908	24,000		

\*The above is the quantity packed by the association and does not include the tonnage of outside packers.

Loose raisins are packed in 50-pound boxes; Thompson's Seedless in 12-ounce cartons, 45 to the case; seeded raisins in one-pound cartons, 36 to the case; also in 12-ounce, 45 to the case and a few in bulk in 25-pound boxes. Raisin clusters are packed in 5, 10 and 20-pound boxes.

*Wooden trays for drying raisins.* The Australian vineyardists have discarded the wooden tray for drying, and use wire netting under cover. It is said that they find that dry air and not sunlight accomplishes the best drying, and preserves the natural color better, and it was found that wire netting made good trays, and cost half that of wooden trays. The driers are roofed affairs, often extending clear across a vineyard or orchard. They are simply constructed. Posts of native timber are set about nine feet apart, and light 1 by 1½ inch pieces are nailed across them. A roof of sheet steel is placed above, and 10 to 12 framed net wire trays are laid in tiers about nine inches apart, one above the other on the crosspieces. The rain is kept out, and the air has free circulation.

## The Raisin Crop of the World, 1908-1918.

Year	California Short tons of 2,000 pounds.	In long tons of 2,240 pounds			Australia (Victoria and South Australia), pounds

\*No reliable figures owing to the war.

†Figures not yet available.

**Raisins and Currants in Australia.**

The raisins and currants produced in Australia are mostly consumed at home. The quantity at present, though not large, is increasing. Victoria and South Australia are the two states with the largest production. In raisins, Victoria is the largest producer. In 1916, Victoria produced 20,171,648 pounds, and South Australia 6,712,048 pounds. In the production of currants the two states are nearly equal; in 1916, Victoria produced 7,902,272 pounds, and South Australia 7,450,016 pounds.

**THE GREEK CURRANT.\***

The Greek or Zante currant has been produced on a very large scale for centuries. They are the seedless variety of a peculiar dwarf grape-vine producing a small black grape, or currant, of a peculiar flavor. It is the most important crop in Greece, as it forms nearly one-half of the total exports. The vineyards cover 150,000 acres, and produce the enormous total of from 300,000,000 pounds to 340,000,000 pounds in a favorable season. About 33,000,000 pounds are imported annually.

**Greek Currants in California.†**

That the grapes from which the Greek or Zante currants are made can be grown in California has long been known. Until lately the possibility of their profitable cultivation has been doubted.

Two varieties are used—the Black Corinth and the White Corinth. The latter is not widely grown in Greece and produces currants of somewhat larger size, but of poorer quality, than the former. It has been grown commercially for many years in California and some of the growers have found it profitable.

The chief source of Greek currants is the Black Corinth, which also has been grown in California for many years. No large commercial success has been obtained with this variety, however. The reason is that the conditions and methods of growing tested have failed to produce paying crops. This seems to be due to excessive vigor of the vine, which causes it to drop its blossoms without setting.

The Black Corinth grows in poor, stony soil in Greece and yields fair crops. Perhaps it might do well in soils too thin for other grapes in California.

**Small Fruits.**

Of the small fruits strawberries lead, both in acreage and production, California being the largest producer in the West, the greatest production being in Santa Clara County. Raspberries and loganberries, and blackberries and dewberries rank second and third, respectively.

The acreage in strawberries in 1916 was estimated at 4,750, and the production 395,800 crates, and the total in the United States, 65,900 acres.

The cultivation of named varieties of blackberries was begun about 1850, and since that time at least 140 different named varieties have been introduced. In 1910 the acreage in California was 2,576. The largest state acreage was in Missouri and New Jersey, with 5,975

\*For details regarding the Greek currants and the "Privileged Company" which controls and markets the crop, see Report for 1912, page 140.

†By Professor Frederic T. Bioletti, University of California.

and 4,332 acres, respectively; the total acreage in the United States amounting to 49,004 acres.

Currants are only grown in about eight states, California being one of them, Alameda County being the largest producer; gooseberries are not much grown anywhere in the United States, Indiana being the largest producer.

Cranberries only acquired commercial importance fifty or sixty years ago. They are principally grown in Massachusetts, New Jersey, and Wisconsin, and are not a success in California.

#### NEW CALIFORNIA FRUITS OF PROMISE.\*

##### The Avocado.

This fruit has well been named the poor man's food. In the countries of South America, Mexico, and other tropical countries, where it grows wild, the very fact that the trees are such abundant bearers and that the fruits possess all the food ingredients to sustain the human body, are the combinations which have caused this fruit to be so designated. The fruit sells with us at very high prices, and it is more than likely it will continue to do so for many years to come.

Avocado growing in California is still in its infancy, but rapid advance is being made and the industry is expected soon to assume rather prominent proportions. According to estimates of the California Avocado Association there were approximately 26,000 budded trees planted in the state. Of this number probably 16,000 would be considered good, marketable varieties. Individual trees in the vicinity of Los Angeles, bear from 400 to as high as 2,000 fruits each, which during the season have sold at prices of from 25 cents to \$1.25 apiece. Gross incomes of \$200 to \$1,000 per tree have occasionally been secured. Such returns, however, must be considered as exceptional and of little value or interest to the prospective planter. Few trees in orchard form have yet come into bearing.

The root stock most favored by avocado growers is the so-called Mexican seedling stock, and as seeds can not be imported from Mexico under the United States quarantine laws, the supply of stock available for budding is limited. Native grown seed, however, is rapidly increasing and the development of the industry will not be seriously affected.

Many of the newly planted groves are now coming into bearing and the production of avocados is likely to increase rapidly in the next few years.

The production in 1918 was small, as the extreme hot weather in June killed all the flowers. The best fruit came from Los Angeles and Orange counties, about five thousand dozen coming from the former place and one thousand dozen from the latter. A number are raised around San Fernando and Santa Ana.

##### The Banana.\*

The only satisfaction that can be derived from growing the banana in California is based on the fact that this distinctly tropical plant can be grown and does produce very palatable fruits in very much favored sections in some of the southern counties of the state. It is a definite

\*See Roeding's Fruit Growers' Guide, 1919, Fresno, California, also for further details regarding cultivation.

demonstration of how closely this climate approaches that of the tropics without having the enervating effect of that climate. The banana is grown from suckers. An abundance of water and fertilizer, consisting of rubbish, which should be spaded in around the plant, will promote a rapid and luxuriant growth.

*The Cherimoyer.\**

Its culture has thus far been confined to the counties south of the Tehachapi, and in these only in sections where there was comparatively little danger from cold weather. Botanically, it is known as *Anona Cherimolia*. Its common name, Custard Apple, is derived from its having the consistency of custard with the blended flavors of the pineapple and the banana. Most of the trees which are sold are seedlings. If greater interest is manifested in this fruit, named varieties will undoubtedly be introduced. It is quite variable in the size of the fruits produced, running from an inch in diameter up to eight inches on the same tree. Where the trees do well they are very prolific and attain quite a large size. There are several small plantations of these trees in Orange and Los Angeles Counties.

*The Guava.\**

Guavas will only be grown to any extent in the counties south of the Tehachapi. If planted elsewhere they will have to be protected, except perhaps in favored locations in the foothills; otherwise they will freeze to the ground during the winter months. There are two varieties, the strawberry and the lemon guava. The former has been more widely planted. The shrub is very attractive, both when in flower and when loaded with its crop of aromatic fruits. Its leaves are glossy green; the flower is snow-white, with a decided jasmine scent. The fruits of the strawberry type are colored like a strawberry, hence the name; while the lemon guava has fruits of a lemon-yellow color. The strawberry guava is by far the better one to plant because it is very much hardier and bears much more abundantly than the other. As in some other fruits of this type the objectionable feature to it is its innumerable seeds. The guava makes a very superior jelly, and in localities where it thrives it grows with so little care it deserves receiving more attention than has been accorded to it.

Two species of guava have been quite widely tried in this state—the strawberry guava, and the lemon guava. They are only grown in California and Florida. According to the Census reports of 1910 there were upwards of 7,000 bearing trees in California, producing about 95,000 pounds of fruit.

*The Jujube.\**

The Jujube has been growing in California for a number of years, having been introduced by G. P. Rixford in 1876, at that time a member of the staff of the San Francisco Bulletin, but now physiologist of the Bureau of Plant Industry, U. S. Department of Agriculture. The oldest trees are said to be growing in Sonoma Valley. Isolated specimens are to be found growing in both the Sacramento and the San Joaquin valleys. The climatic conditions of the interior valleys seem to be particularly favorable to its rapid growth. It is very extensively grown

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

in northern China, where hundreds of varieties, it has been said, have been developed. It grows in the driest of locations and is very resistant to alkali. Many new and valuable varieties have been introduced by the Office of Foreign Seed and Plant Introduction of the United States Department of Agriculture, and if eventually this becomes an industry of any importance in California, we will owe a debt of gratitude to this great department of our National Government which has accomplished more in behalf of the agricultural and horticultural interests of the United States than any other institution of like character, in the world. Many of these new varieties of jujube are now being experimented with at the Plant Introduction Garden near Chico, California. Some sorts are eaten fresh, while others are dried. The largest varieties are processed by boiling in sugar and honey. They make most desirable sweetmeats when so processed and are even more delicious than the Persian dates of commerce. The trees bear enormously, and they are very ornamental. The fruits are very palatable whether processed or not, therefore we have in the jujube combinations which will cause it to become, once its value is better understood, a valuable acquisition to our list of fruits. The only varieties on the market now are those produced from seed.

The credit for successfully processing the first jujubes in the United States is due to Mrs. R. L. Beagles, wife of the farm superintendent of the Plant Introduction Field Station of the U. S. Department of Agriculture, Chico, California. The plant is easily grown from seed or grafts.

The importation of the large fruited, grafted Chinese varieties was only begun in 1906. Under irrigation in northern California the trees have grown luxuriantly and fruited abundantly. The ripe fruit contains a high per cent of cane sugar—as much as 20 per cent.

In general, the jujube may be said to be a heavy bearer, and in California some varieties have proved unusually fruitful. They bear very early, some one-year-old grafts producing as many as 24 fruits. Trees have fruited heavily at Chico, Fresno, Indio, and Bard, in Imperial Valley. There are also 700 one to two year old trees near Hamilton City, Butte County. There is another orchard of about 250 grafted trees and some seedlings near Princeton.

#### The Loquat.\*

This fruit is widely grown in California as an ornamental plant, and a small amount of fruit is marketed. The Census of 1910 reported 3,700 trees in bearing, producing 4,500 boxes. As an ornamental tree much may be said in its favor. Its wide adaptability, there being very few places in California where it can not be grown successfully, and in addition to this its delicious fruits, coming in before any of the other table fruits in the spring, should cause it to be more widely planted than it has been.

Many budded varieties have been introduced from Japan and Southern Europe, but none of them equal in size or compare in quality to the sorts introduced by C. P. Taft, of Orange, California.

---

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

## FRUIT CANNING AND PRESERVING, 1904-1918.

California made a pack of hermetically sealed fruits in tin cans in 1861. For many years after that canned goods were a luxury, relatively expensive, and used only in emergencies, on board ship or at remote places where other food was not obtainable.

The real importance and development of the canning industry did not commence until about the year 1875. The value of its products, which in 1889 was \$6,621,931, more than doubled during each of the two following decades, amounting in 1909 to \$32,914,829.

The case, which is used as the unit of measure for canned fruits and vegetables in the table below, consists of 24 standard-size cans No. 2 (also called 2-pound cans) for berries, cherries and plums, and No. 3 (also called 3-pound cans) for all fruits and vegetables.

California ranks first among the states in the production of canned apricots, peaches and pears, and of dried peaches and prunes; the state had a complete monopoly of the production of dried apricots and of raisins in the United States in 1909, neither of these being produced in any other state.

The most important of the dried fruit products, both in point of quantity and of value, were raisins and prunes. The fruit most largely canned in 1909 was peaches, the value of which constituted 9.2 per cent of the total for the canning and preserving industries.

## CANNED FRUITS, 1904-1914.

\*California Fruit News, published by Howard C. Rowley, July 12, 1919.

The varieties of fruit cured by drying are as follows:

<i>Apricots</i> —	<i>Peaches</i> —	<i>Nectarines</i> —	<i>Plums</i> —
Royal	Lovell	Stanwich	Washington
Blenheim	Muir	<i>Pears</i> —	Jefferson
<i>Figs</i> —	Crawford	Bartlett	Egg
Adriatic	Foster		<i>Prunes</i> —
			Petites

Dried fruit is packed in boxes of 25 and 50 pounds, and 12½ kilos for abroad.

## VARIETIES AND AVERAGE QUANTITY OF FRUIT USED IN CANNING.\*

While there is a limited quantity of jams, jellies, and preserves manufactured commercially within the state, by far the larger quantity of fruit is used for canned fruit—that is, fruit that is filled into the can fresh, before cooking; sugar syrup is then put in merely for flavoring, the can is hermetically sealed and finally processed or sterilized by heat. Sugar is not essential to the keeping qualities. The preserves, jams and jellies stewed in kettles with a high percentage of sugar are not so dependent upon hermetic closure, as the sugar acts as a preservative agent. For these so-called preserves California produces suitable berries, sour cherries, peaches, plums, quinces, currants gooseberries, apples and figs and grapes. But of greater commercial importance are the fruits that are generally used for tinned or canned fruits—apricots, peaches, pears, cherries and plums.

*Apples.* About 2,500 tons are canned annually in California, chiefly Newtown Pippins. The average price paid is from \$10 to \$12 per ton. The apples for canning purposes come largely from Sonoma, Santa Clara and Santa Cruz counties.

*Apricots.* In a normal season 20,000 tons of apricots are canned in California. The average price paid to growers for the past five years has been \$30 per ton. The Royal Blenheim and Hemskirke varieties grown in Santa Clara Valley gives the best results to the canner. Moor-parks have a flavor preferred by many, and they grow to a large size.

*Cherries.* Royal Ann and White cherries in general are preferred. An average price would be from 5 to 6 cents per pound. About 1,200 tons of Royal Anns and Whites are used annually for canning, and probably 450 tons of Blacks.

\*See address before the State Fruit Growers' Convention, Davis, June, 1914, by C. H. Bentley, Sales Manager, California Fruit Cannery Association, San Francisco.

*Grapes.* The Muscat or raisin grape is canned to a limited extent; about 1,000 tons are used annually at a price of about \$12 to \$15 per ton.

*Nectarines.* Nectarines are canned, but a very limited quantity is used, and the fresh and dried fruit markets are more desirable for this variety.

*Peaches.* The freestone varieties, such as the Muir and Lovell, are preferred. About 24,000 tons are canned annually with prices about \$22.50 per ton for Lovell, and \$17.50 for other varieties like the Muir and Early Crawford. In spite of the increased trouble and expense of removing the pit, Yellow Clings are the most desirable of all California canned fruits, and more of these are canned than any other variety. An average price delivered at the cannery would be about \$25 per ton for Phillips and Tuscan, and \$20 for other varieties. In the case of clings, a considerable demand has developed for slices. About 35,000 tons are used for canning.

*Pears.* About 20,000 tons of Bartlett pears are canned annually. The price paid to growers ranges from \$30 to \$40 per ton.

*Plums.* Egg plums, Green Gage, Golden Drop plums and similar varieties are used to a limited extent for canning. About 2,500 tons are used for canning, and the price is usually from \$15 to \$20 per ton.

*Berries.* Blackberries have been produced in large quantities, chiefly in Sonoma County, and are used extensively by canners. The Mammoth and Lawton varieties are most common. About 2,000 tons are used by canners and makers of preserves. The price has ranged about \$40 per ton. Far better results are obtained from loganberries. In its fresh form the price ranges from \$55 to \$75 per ton. Canners use about 750 tons.

*Straubberries.* The varieties commonly grown are comparatively soft and juicy, suitable for jams and jellies, but not for preserves. Such are the Dollar and Jessie varieties of the Florin district near Sacramento, and the Banner and Malinda berries of the Watsonville district in Santa Cruz County. The Longworth of the Alviso and Santa Clara districts has become too small to give satisfaction to the canner. These varieties ordinarily bring \$60 to \$70 per ton, while the Clarke, Wilson and other similar varieties grown in Oregon bring \$100 per ton. About 800 tons are used by canners and preservers, but a much larger quantity could be used of better varieties.

With raspberries, also, the canners find better results from Oregon fruit, because it is firmer and higher in color. The Cuthbert and Antwerp varieties are preferred for canning. Canners use about 100 tons.

*Gooseberries* are used in a limited way for jams and jellies.

*Calimyrna and White Endish Figs* are used to some extent. Texas seems to be able to grow a small white fig of good quality and this is canned to a considerable extent. There would seem to be an opportunity for development in California.

*Damsom Plums* are needed for preserves, jams and jellies; they bring \$35 to \$40 per ton when ordinary varieties like the Gage and Egg Plums are selling for \$15. There are very few grown at the present time.

*Concord Grapes* are needed for jams and jellies; the want is partly filled by the Isabella variety.

*Quinces*, which were for years a drug on the fall fruit market, now bring \$25 to \$30 per ton.

*Crab Apples* are in short supply, commanding a price of  $4\frac{1}{2}$  to 5 cents a pound.

*Sour Cherries* are also used in a limited way.

#### NUTS.

About three-fourths of the nuts produced in the United States are grown in California, walnuts and almonds being the principal crops.

Walnuts in the United States are produced almost exclusively in California, Orange and Los Angeles counties taking the lead.

California produces practically the whole of the almond crop in the United States.

Peanuts thrive well in southern California, chiefly on the lower lands of the coast region, while in central and northern California peanuts are mostly grown in the river bottoms of the Sacramento and San Joaquin valleys.

#### Almonds.

The almond crop in 1918 was very light per acre, the increase over the previous year being due to new acreage. The prices received by growers were the highest ever paid, and nearly double those of 1915.

California is the only state in the Union producing almonds commercially, and about 75 per cent of the crop is controlled by the California Almond Growers' Exchange. In 1918 23,840,145 pounds were imported, valued at \$5,454,408.

Almond Crop, 1910-1918.

	Pounds		Pounds
1910 -----	6,600,000	1915 -----	7,000,000

Walnut Crop, 1912-1918.

The acreage in walnuts in 1918 was estimated at 47,775 bearing and 18,808 nonbearing. The value of the walnut crop in 1918 amounted to \$11,475,250, unshelled walnuts amounting to \$10,870,250, and the shelled to \$605,000.

The value of the walnut crop in 1918 amounted to \$11,478,250, unshelled walnuts amounting to \$10,870,250, and the shelled to \$605,000.

New walnut producing areas are being developed, and very heavy plantings are being undertaken in several sections, in the San Joaquin Valley and other valleys in the state.

The English walnut is the greatest nut grown in the state, judged by the size and value of the crop. It is almost entirely grown in the four southern counties of Santa Barbara, Los Angeles, Orange and Ventura.

The bulk of imported nuts are of the Marbot and Cornes varieties, which correspond in size and quality to the second grade of the Pacific coast production. There are about four million pounds of Naples walnuts imported from Italy annually, and these are the greatest competitors of the California product, as they are of high quality and bring a high price on the market. The total quantity of walnuts imported in 1918 was 23,289,170 pounds, valued at \$5,690,511, being almost the same quantity and value as almonds.

Walnut Crop, 1912-1918.

Year	Pounds	Year	Pounds
1912 -----	22,024,000	1916 -----	29,244,000

No. 2 S. S. walnuts -----	25 ¢

The prices for No. 1 soft shell walnuts for the past 6 years were as follows:

1913 -----	16 ¢
1914 -----	16½¢
1915 -----	13½¢
1916 -----	15½¢
1917 -----	20 ¢
1918 -----	28 ¢

#### Chestnuts.\*

"The Spanish or sweet chestnut is a stately and magnificent tree, native of the countries bordering on the Mediterranean, but also ripening as far north as Scotland. This nut can be grown very successfully in the coast counties, where the conditions are exceptionally favorable for them. Of chestnuts grown in California the Italian predominates, and it may be said that a large area of the state is well suited for the growth of this nut, as there are bearing trees in nearly all parts of the state. The chestnut, aside from its desirability as an orchard tree, can be commended as a tree for hillsides or a shade tree, and should be more widely planted in California.

There are so many points in favor of the chestnut that it is very difficult indeed to understand why the culture of this nut has not long before this become one of our leading industries. Aside from the fact that the trees are very ornamental, the certainty of a crop one year with another should have caused them to be planted on an extensive scale. By heading the trees low it is practical to grow them in the interior valleys. However, from a standpoint of profit they should only be planted in the deep, alluvial, silty soils found in our river bottoms.

Chestnut culture has always been a problem in the Eastern States when it came to growing European and Japanese types, and now that the blight has made such a serious invasion into the great chestnut forests of the East, there can be no possible excuse for the Pacific Coast States not engaging in this industry which is so promising."

The chestnut is an important crop in Italy, where the yield was 696,244 tons in 1916, and it is considered an important crop, as it forms one of the chief foodstuffs of the poor. Chestnuts also bulk largely in the food resources of the poor in Spain, Switzerland and Germany. Chestnuts are eaten raw or roasted, or else ground into flour. The quantity imported into this country can not be stated, as in the customs returns they are not given separately, but included under "all other nuts."

#### The Pecan.

The pecans grow well in the lower lands of the interior valleys, but are raised in only limited quantities. The most favorable reports of pecan production on the Pacific coast have come from the interior valleys of central and northern California. Very favorable reports have been received from small orchards and scattered trees (mainly seedlings) from Chico, Woodland, Winters, Vacaville, Elk Grove, Stockton, Farmington, Patterson, Fresno, and Bakersfield. Reports from Anaheim and Whittier, in southern California, where great trouble is experienced with pecan rosette, have been much less encouraging. In the opinion of one of the leading practical horticulturists of the San Joaquin Valley, the pecan offers greater inducements for that particular section than does the almond or the walnut (Persian).

"Of the eight or nine species of hickories the one which produces the most marketable fruit and in the most profitable quantities is the pecan. A native of the Southern States, it is today the only nut (which has any commercial importance) which is grown there, and to a limited

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

extent in the Middle States. Texas is probably the largest producer of pecans, the crop aggregating several millions of pounds.

Old seedling pecan trees are found growing and producing heavy crops annually in the Sacramento and San Joaquin valleys. A number of seedling trees, two feet and over in diameter, are growing one mile north of Fresno, bearing abundant crops.

It is only within the last ten years that pecans have been regarded of sufficient commercial importance to cause groves to be planted in the middle and Southern States, and the condition of affairs has been brought about by the unexcelled merit of the paper-shell pecan. In California only a very few paper-shells are to be found; none of these are over fifteen years old."

#### The Pistachio.

This nut is a native of Syria, and is generally cultivated in the Mediterranean region. The trees do exceedingly well in the Sacramento and San Joaquin valleys in California. A few of the grafted trees of some of the commercial varieties in the Chico test orchard are bearing a few nuts this season. Seedling trees near Fresno have borne large crops of nuts for some years. Mr. Walter T. Swingle and several others who have studied the subject and are familiar with the conditions believe that in the not distant future pistache culture will be an established commercial industry of considerable importance in this country.

The peculiar beauty of the Chinese pistache and the great age to which it lives have suggested its trial as an avenue tree. A trial avenue a quarter of a mile long, planted at the Chico garden in 1910, already makes an excellent appearance.

The small, green-fleshed nuts are most excellent to eat when roasted and salted, and are extensively used in the coloring and flavoring of ice cream and confections. The entire supply of these nuts at present comes from abroad. This country can, and surely should, grow what it needs.

"Comparatively little is known about the pistachio, or green almond. It is particularly well adapted to the warm interior valleys. The trees are of very easy culture, thrive on a great variety of soils and are, as a matter of fact, very much hardier than the fig and the olive. As border trees they are very attractive, and I have every reason to believe they will prove quite profitable. They would be used by the foreign population much more extensively than they are if the price at which they are sold, from sixty to eighty cents per pound, was not so high. The importations are estimated to average \$200,000 per annum. There is no question about the future of this industry, though up to the present time it is still in the experimental stage. It is largely through the efforts of the Bureau of Plant Industry of the United States Department of Agriculture that varieties of merit have been introduced in recent years. I am giving now, and have given for several years, considerable time and thought to the culture of this nut, and I am confident that the time is not far distant when it will become another valuable acquisition to our list of horticultural products."\*

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

## PRINCIPAL ORCHARD FRUITS BY COUNTIES.

Best Location for the Leading Fruit Crops in 1910.

The following summary is both interesting and valuable, as the figures show which districts are the best for raising the different varieties of fruit. In the earlier years many failures were experienced by growers, owing to the soil or climate not being suitable for the trees they had planted.

According to the number of trees in bearing, reported by the Bureau of Census in 1910, the following six counties rank in the order named in the production of various fruits:

## Apples.

County	Number of bearing trees	County	Number of bearing trees
Santa Cruz -----	647,136	Santa Clara -----	102,841
Sonoma -----	386,740	Los Angeles -----	101,433
Monterey -----	290,404	Humboldt -----	73,010

## Apricots.

Santa Clara -----	783,585	Ventura -----	219,836
Solano -----	310,262	Fresno -----	186,823
Alameda -----	270,461	Yolo -----	117,228

## Cherries

Santa Clara -----	173,002	Sonoma -----	43,927
Alameda -----	89,284	Placer -----	31,209
Solano -----	53,923	San Joaquin -----	21,590

## Peaches and Nectarines.

Fresno -----	2,277,314	Placer -----	683,824
Kings -----	777,697	Santa Clara -----	437,677
Tulare -----	714,494	Solano -----	341,266

## Pears\*

Solano -----	182,194	Santa Clara -----	142,550
Sacramento -----	161,094	Sonoma -----	109,965
Placer -----	142,999	Alameda -----	70,382

## Prunes and Plums.

Santa Clara -----	3,387,455	Napa -----	299,613
Sonoma -----	569,232	Placer -----	279,766
Solano -----	465,341	Tulare -----	264,337

\*Owing to the ravages of the pear blight, the number of bearing trees decreased from 2,512,890 in 1900 to 1,410,905 in 1910.

**Total Number of Bearing Orchard Trees.**

(Census Bureau, 1910).

The following twelve counties had the largest number of orchard fruit trees in bearing, in the order named:

County	Number of bearing trees	County	Number of bearing trees
Santa Clara -----	5,043,766	Kings -----	1,048,506
Fresno -----	2,579,859	Santa Cruz -----	875,642
Sonoma -----	1,364,105	Alameda -----	627,824
Solano -----	1,357,911	Sacramento -----	506,961
Placer -----	1,190,074	Napa -----	497,391
Tulare -----	1,059,830	Butte -----	452,302

## CALIFORNIA CROPS COMPARED WITH OTHER STATES.

The following summary shows that California holds a leading position in the production of a number of the principal crops of fruits and nuts in the United States, and sugar beets. The three leading states are here given from the census reports on the basis of value. When less than three states are named, others do not produce that particular crop:

## California Crops Compared With Other States.

(Compiled from the Census of 1910.)

Crop	Acreage	Production	Value
Almonds—			
California	-----	6,692,513 pounds	\$700,304
Avocados (Alligator pears)—			
Florida	-----	4,920 crates	10,100

In quinces California takes the fourth place, New York, Pennsylvania, and Ohio leading. In raspberries and loganberries, New York, Michigan, and Ohio take the first three places, with California fourth and Washington fifth. In other crops, the first place is held by the following states: chicory, Michigan; cranberries, Massachusetts; flowers and plants, New York; gooseberries, Illinois; maple syrup, Ohio; maple sugar, Vermont; mint, Michigan; peanuts, North Carolina; pecans, Texas.

TABLE XXXII.  
ACREAGE IN BEARING OF THE PRINCIPAL FRUITS AND NUTS IN 1918.  
(Compiled from the Report of the State Commission of Horticulture.)

## EFFECT OF THE WAR ON THE FRUIT INDUSTRY, 1915-1918.

The figures regarding the imports and exports of fruits during the last four years shows some remarkable results. Bananas and pineapples, not being raised in California, are only included so as to show the total value of fruits imported. Dates are now being produced to limited extent, but the prospects of the industry are encouraging. The importation of currants, which in 1894 amounted to upwards of 52,000,000 pounds, and in 1913 to 47,000,000 pounds, were only 30,000,000 pounds in 1915, and fell to 50,000,000 pounds in 1918, while dates also fell from 24,000,000 pounds to 5,000,000, which had the effect of greatly increasing the demand for California seedless raisins. Figs have fallen off from 20,000,000 pounds in 1915 to 10,000,000 pounds in 1918. The imports of Almeria grapes has also decreased materially, or from 1,230,000 cubic feet in 1915 to 556,000 cubic feet in 1918. The value of lemons has decreased from \$5,227,000 in 1914, to \$2,179,000 in 1918. But the value of oranges shows an increase of from \$50,000 to \$62,000. Olives have not fluctuated in quantity or price so much as other fruits, 3,622,000 gallons being imported in 1915 and 2,385,000 gallons in 1918. Raisins have been steadily falling off for the last ten years, in 1914 4,554,000 pounds were imported, but only 843,000 pounds in 1918, by far the lowest quantity ever recorded. It will be observed that the total value of imported fruits is still very high, and these figures go to prove that there is ample room for a much larger development of the fruit industry in California.

## IMPORTS OF FRUIT.

(For the fiscal year ending June 30).

Fruit	Quantity 1915	Value 1915	Quantity 1918	Value 1918
Bananas, bunches	41,091,585	\$13,512,960	34,549,913	\$15,147,643
Currants, pounds	30,350,527	1,209,273	5,168,070	561,904
Dates, pounds	24,949,374	420,203	5,572,908	249,621
Figs, pounds	20,779,730	1,024,495	10,473,239	715,423
Grapes, cubic feet*	1,323,928	1,523,547	556,558	648,093
Lemons		3,730,075		2,179,211
Olives, gallons	3,622,275	1,607,903	2,385,059	1,062,487
Oranges		50,022		62,906
Pineapples		1,309,750		801,298
Raisins, pounds	2,808,806	238,958	843,593	153,319
Fruits, preserved		1,022,968		712,428
All others		1,431,242		2,114,444
Totals		\$27,081,396		\$24,408,777

\*100 cubic feet are equal to one ton.

Bananas are imported principally from Central American states, British Honduras, and the British West Indies, and also from Cuba. Currants are imported almost exclusively from Greece, and dates from Turkey and Asia. Figs come mostly from Smyrna in Turkey in Asia, and the balance from Portugal and Greece. Grapes (Almeria) come from Spain, and lemons almost entirely from Italy. Most imported olives come from Spain, but a considerable quantity also comes from Greece. Most of the olive oil imported comes from Italy, France and Spain supplying smaller quantities. The bulk of the oranges imported come from Jamaica, Mexico and Italy supplying smaller quantities.

Most of the imported pineapples come from Cuba. Raisins are imported almost exclusively from Spain, and Sultanas from Smyrna, but the quantities are small and decreasing every year, owing to the quantity now produced in this state. Preserved fruits come principally from France and Italy, and most of the nuts imported are from France, Spain and Italy.

#### EXPORTS OF DOMESTIC FRUITS, 1915-1918.

In exports the most striking difference is the great increase in the exports of raisins during the last four years, from 24,845,000 pounds to 54,987,000 pounds, while the export of canned fruit is the most valuable, amounting to upwards of \$7,000,000. The quantity of dried apples exported in 1915 amounted to 42,589,000 pounds, but in 1918 the quantity fell to 2,602,000 pounds. Of green or ripe apples 2,351,000 barrels were exported in 1915, and 635,000 barrels in 1918. Dried apricots also declined from 23,764,000 pounds in 1915 to 5,229,000 pounds in 1918. Figs are not yet being exported in any quantity, but the industry is growing rapidly, and a large acreage has been planted during the last year or two, especially in Fresno and Madera counties. In citrus fruits the exports are remarkably steady and their value forms an important item.

In 1915 122,900 boxes of lemons were exported, compared with 138,000 boxes in 1918, while oranges amounted to 1,759,000 boxes in 1915, and 1,240,000 boxes in 1918. Dried peaches, which is one of our most important crops, shows a considerable falling off in exports since 1915, when it amounted to 14,464,000 pounds, but in 1918 only 5,862,000 pounds were exported. The exports of green or ripe pears is comparatively small. Prunes have always been one of our largest exports in dried fruits, the quantity in 1915 being 43,478,000 pounds and in 1918 32,926,000 pounds, but in some years have considerably exceeded those figures. The export of raisins has rapidly increased in recent years, and in 1918 exceeded that of prunes by 22,000,000 pounds.

#### EXPORTS OF FRUIT, 1915-1918.

1918 .....	18,400,000	10,473,239	715,423

Nearly all the figs previous to the war were imported from Smyrna, in Turkey in Asia, about two million pounds from Greece and smaller quantities from Italy and Spain. In 1916 a considerable quantity were imported from Portugal.

Exports of domestic figs are not shown separately in the customs returns, but are included in "All other green, ripe, or dried fruits."

**OLIVES, 1908-1918.**  
(Duty, 15 cents per gallon.)

Year	Imported	
	Gallons	Value
1908	3,121,788	\$1,358,897
1909	2,969,329	1,349,023
1910	4,555,975	1,659,801
1911	3,044,947	1,567,546
1912	5,076,857	2,303,277

1915	3,622,275	1,607,903
1916	5,938,446	2,433,304
1917	5,641,759	2,338,615
1918	2,385,059	1,062,487

NOTE.—Olives in California, although cultivated on a considerable scale, have generally been considered one of the minor crops, and no regular records of the crop have been kept until the last few years. A large acreage has been planted in the last two or three years. Previous to 1907 the imports of olive oil were not given separately in the customs returns.

Most of the olives imported into this country come from Italy, France and Spain. In 1918, owing to the war, nearly all the edible olive oil came from Spain, or 2,091,400 gallons.

Exports of domestic olives and olive oil are not shown separately in the customs returns, but included in "All other fruits, or all other oils."

**OLIVE OIL, 1898-1918.**

**Imports.**

(Duty, in cask, 20 cents per gallon; in bottles, 30 cents per gallon. Olive oil unfit for food, free.)

1918	*	2,179,211	138,063	728,791

NOTE.—In 1918 the value of lemons imported from Italy was \$2,153,896 out of a total of \$2,179,211. Of the exported domestic lemons, 122,153 boxes went to Canada, China being next with only 4,522 boxes.

\*The quantity is not stated after 1913.

†The exports of domestic lemons were not shown separately in the customs returns until 1913, but were included under "All other" fruit.

## PEACHES AND NECTARINES (DRIED) EXPORTED, 1898-1918.

(None imported.)

Year	California crop, pounds			Exported	
	Peaches	Nectarines	Total	Pounds	Value
1898	10,960,000	190,000	11,150,000		
1899	34,800,000	840,000	35,640,000

1914 -----	182,000,000	14,766,416	997,575	4,554,549	309,511
1915 -----	256,000,000	24,845,414	1,718,547	2,808,806	238,958
1916* -----	264,000,000	75,014,753	5,407,219	1,024,296	143,750
1917* -----	326,000,000	51,992,514	4,409,639	1,850,219	234,560
1918* -----	334,000,000	54,987,793	4,981,270	843,533	153,319

NOTE.—Imported raisins come almost entirely from Spain, and Sultanias, which are included in the above figures from Smyrna in Turkey in Asia. These latter have also greatly decreased in recent years from upward of 7,000,000 pounds in 1906 to 1,056,574 pounds in 1915, and none have been imported since. Canada is our best customer for raisins, taking 18,000,000 pounds in 1913 and 10,000,000 in 1914.

\*About 20 per cent should be added to these totals for raisins packed outside the Association.

## DRIED GRAPES.

The quantity of "dried grapes" (which are wine grapes) is now small, and is discouraged, as they make inferior raisins.

## IMPORTS OF GREEK CURRANTS, 1898-1918.

(Duty, 1½ cents per pound.)

Year	Pounds	Value	Year	Pounds	Value
1898	25,186,210	\$837,987	1909	32,482,111	\$1,185,106

Almost all almonds are imported from Spain and Italy. In 1918, 8,706,782 pounds of shelled almonds came from Spain, and 3,790,875 pounds unshelled, or a total of 12,497,657 pounds, and from Italy 9,740,497 pounds shelled, and 364,195 unshelled, or a total of 10,104,692 pounds, or a total for the two countries of 22,602,349. Of almonds the largest proportion is imported shelled, but the reverse is the case with walnuts, the quantity unshelled being nearly double of the shelled.

## WALNUTS, 1898-1913.

(Duty, shelled, 4 cents per pound; unshelled, 2 cents per pound.)

Year	California crop, pounds	Imported	
		Pounds	Value
1898	11,300,000		
1899	11,160,000

Almost all walnuts are imported from France and Italy. In 1918 there was a heavy fall in the quantity imported owing to the war, but in 1917 10,892,978 pounds of shelled walnuts and 7,409,929 pounds unshelled came from France, or a total of 18,302,907 pounds; and from Italy 223,889 pounds of shelled and 7,598,723 pounds of unshelled, or a total of 7,822,612 pounds; or a total for the two countries of 26,125,519.

## IMPORTED NUTS, 1898-1918.

(Duty on imported peanuts, unshelled,  $\frac{3}{4}$  of 1 per cent per pound; shelled,  $\frac{3}{4}$  of 1 per cent per pound; all others (except almonds, peanuts and walnuts) 1 cent per pound.)

Year	Peanuts and other ground nuts		Miscellaneous nuts, value	Total value, all nuts*

## PART VIII.

# CALIFORNIA WINE INDUSTRY.

### Production of Wine and Brandy in Other States, Sweet Wines and Brandy, California Vineyards, Vintage of 1918, Dry Wines, Sparkling Wines, Grape Juice, Vintages 1908-1918, Production of Beer 1913-1918, Imports and Exports of Wine and Brandy, 1908-1918.

The California wine industry, with its extensive vineyards of wine grapes and enormous investments of capital, has attained such proportions as to demand special notice. The output, both in wine and brandy, is much greater than that of all other states combined.

The State Board of Viticultural Commissioners estimates that more than half the acreage of vineyards in the state is planted to wine grapes, the area being about 170,000 acres.

#### Wine and Brandy.

Almost all the sweet wine and brandy produced in the United States is made in California. New York makes small quantities of port, sherry and sweet catawba; New Jersey, port and sweet catawba; North Carolina and Virginia, scuppernong; and Ohio appears as a maker of sweet wines in 1915 for the first time in ten years, with 6,863 gallons of scuppernong, and 1,015 gallons of sweet catawba, but in 1916 made no sweet wine. Missouri also made a small quantity of sweet wine some ten years ago, but only about 1,500 gallons. The total production of sweet wine in the United States in 1918 was 17,504,454 gallons, of which quantity California supplied 17,101,971 gallons, and all other states only 411,138 gallons. Of fruit brandy California produced 7,871,759 gallons, and all other states 379,338 gallons, or a total of 8,251,097 gallons in the United States.

## Great Wine Grape Vineyards.

Some of the California vineyards are now the largest and best cultivated in the world. In the southern part of the state there is the large vineyard of the Italian Vineyard Company at Guasti in San Bernardino County, comprising 3,547 acres of all the best varieties, including Alicante Bouschet, Zinfandel, Burger, Folle Blanche, and a dozen others. In central California there is the Wahtoke vineyard, near Reedley, in Fresno County, of 3,631 acres, with 2,500 acres already planted and in bearing and containing some twenty of the leading varieties. Vina vineyard, in Tehama County, had 1,500 acres, mostly in Zinfandel and Burger, but the vineyard has now been given up to other crops.

There is no reliable data available regarding the quantity produced of the various kinds of dry wine, but since 1890 the exact figures for sweet wines and brandy have been recorded. The quantity of sweet wine has increased during the last twenty years from 1,083,000 gallons in 1891 to 23,467,000 in 1912 (August-December, 1911), which is the largest in the history of the industry.

Port and sherry are the two principal wines, the former leading with an average of 9,000,000 gallons, while the production of sherry is about 5,000,000 gallons, but in 1903 and 1912, it amounted to 8,000,000 gallons. Muscatel and Angelica are the next favorites, followed by Malaga and Tokay.

The imports of foreign wines have remained steady during the last few years, the value being about \$8,000,000 to \$10,000,000 annually.

California grows the principal wine grapes of France, Italy, Spain, Portugal and Germany, and the variety of types of wines produced is unequaled by any country in the world. Conditions suitable for the growth of any variety, including the American varieties of the Eastern States, are found here. Large quantities of sweet wine and brandy are made from the Muscat of Alexandria and form a special type of their own.

## Wine Grapes Used in California.\*

Practically all the principal wine grapes of Europe have been introduced into California and tested. About four-fifths of the wine, both dry and sweet, however, is made from about a dozen varieties, and between forty and fifty will include over 95 per cent of the wine grapes.

\*Professor Frederic T. Bioletti, of the University of California.

The Zinfandel is the typical red wine grape of California and is grown in larger quantities than any other. From it the bulk of dry and sweet red wines is made. The proportion of Zinfandel, however, tends to diminish in newer plantings. Other red wine varieties largely planted are Carignane, Petite Sirah, Mataro, Petit Bouschet, Alicante Bouschet, Grenache, Blue Elbling and Charbono. The commonest white wine grapes are Burger, Colombar, Palomino, Green Hungarian, Feherzagoes and Muscat of Alexandria. Of table and raisin grapes, used also largely for wine making, the principal are, besides the Muscat, the Flame Tokay, Malaga, Sultana, Sultanina (Thompson's) and Verdal.

The fine wines are made principally of Petite Sirah, Colombar and Semillon, though a large number of other fine varieties are used in varying amounts.

The yield of average vineyards varies from one or two tons per acre to eight or ten tons. This difference depends principally on the soil and climate and on the methods of the grape grower. Some varieties have the reputation of being heavy bearers and some of being light. The differences, however, are often more those of proper adaptation to conditions and the use of proper viticultural methods.

#### Wine Grapes Recommended for California.

##### FOR COOLER REGIONS.

*Fine wines of Rhine types:* Franken Riesling, Johannisberger, Traminer.

*Fine wines of Sauterne type:* Semillon, Colombar, Sauvignon Blanc.

*Fine wines of Chablis type:* Marsanne, Chardonay, Peverella.

*Bulk white wines:* Palomino, Green Hungarian.

*Fine wines of Medoc type:* Cabernet Sauvignon, Beelan, Blue Portuguese, Verdot, Merlot.

*Fine wines of Hermitage type:* Petite Sirah, Mondeuse, Tannat.

*Bulk red wines:* Zinfandel, Carignane.

##### FOR WARMER REGIONS.

*Fine white wines:* Franken Riesling, Vernaccia Sarda, Marsanne.

*Bulk white wines:* Burger, Folle Blanche, West's White Prolific.

*Fine red wines:* Valdepeñas, St. Macaire, Lagrain, Gros Mansenc, Barbera, Refosco.

*Bulk red wines:* Zinfandel, Alicante Bouschet.

##### FOR SWEET WINES.

*Fine white:* Furmint, Beba, Boal.

*Bulk white:* Palomino, Perruno, Mourisco Branco.

*Fine red:* Trosseau, Tinta, Maderia.

*Bulk red:* Grenache, Mission, Monica, California Black Malvoisie, Tinta Amarella, Alicante Bouschet.

*Muscat:* Muscat of Alexandria, Malvasia bianca.

Some varieties, such as the Riesling, give fine wines, though of different character, wherever they are planted. Others produce a fine wine in one locality and a poor wine in another. The Cabernet Sauvignon produces a fine wine in the cooler regions and a harsh,

disagreeable wine in the hot regions. The Valdepeñas produces a better wine in the hot interior than in the coast regions.

Most of the varieties recommended for bulk wines are capable of yielding fine wines under favorable conditions, when blended with a sufficient quantity of finer varieties.

The production of wine and brandy is given for the fiscal year ending June 30, but as almost all the wine is made in the fall of the year, the vintage of sweet wines is really that of the previous year.

#### DRY WINE PRODUCTION, 1917.\*

No accurate record of dry wine production in California is obtainable, because this class of wine is made without government supervision and private records of inventories of this class of wine as far as individual producers are concerned are not given out. This department, however, is in a position to make a fairly accurate estimate of the dry wine production from the general knowledge of the output by counties, and we give this estimate in the following tabulation:

	Gallons
Alameda County and bay cities, including wine made in cellars of foreigners in San Francisco.....	3,000,000
Napa County .....	3,000,000
Contra Costa County.....	500,000
Mendocino County .....	250,000
Sonoma County .....	5,000,000
Santa Clara County.....	2,000,000
Santa Cruz County.....	20,000
Sacramento County .....	800,000
Lodi section .....	3,000,000
Fresno section .....	300,000
Southern California .....	1,650,000
Various other sections.....	500,000
Total.....	20,020,000

It required 148,000 tons of grapes to produce this amount of wine. The purchase price of these grapes ranged from \$15 to \$35 per ton

#### DRY WINE PRODUCTION FOR 1918.†

The dry wine production in California during the 1918 vintage season was 25,000,000 gallons, which is equal to a normal production.

Of this production there was a falling off of the usual or normal amount produced in the sections of the state primarily known as dry wine sections, but the average was more than made up by an unusual production in some of the sweet wine section.

Nineteen million gallons of dry wine were made in the counties of Mendocino, Napa, Sonoma, Contra Costa, Santa Clara, Santa Cruz, Sacramento, Solano, San Joaquin, Fresno, Alameda and San Francisco.

Six million gallons of dry wine were manufactured in San Bernardino, Los Angeles and San Diego counties in southern California.

This total production of 25,000,000 gallons called for the use of nearly 170,000 tons of grapes.

On a basis of \$35 per ton this tonnage of grapes made into dry wine brought the growers \$5,950,000.

\*From the Report of the State Board of Viticultural Commissioners, 1918.

†Report of the State Board of Viticultural Commission, 1919.

The wine grape crop throughout the state brought unheard-of prices, and when the grower thought he was not receiving high enough figures locally he had an opportunity of dealing with brokers and dealers who represented Eastern purchase sources. A very considerable proportion of the wine grape crop was moved out of California to other states of the Union where it was converted into wine. We estimate the number of cars of wine grapes so transported to have been 6,000 cars, and prices realized by the shippers probably averaged to them at the shipping point \$35 per ton. In localities where wine grapes were under contract the purchaser eventually raised the contract price from whatever it might have been to a figure of \$22.50 per ton and from that point upward. Sales to the local wineries ranged from \$25 per ton in sweet wine districts to \$50 per ton in dry wine districts. The California production of wine, however, was curtailed because of the probable approach of federal war-time prohibition and the sweet wine output was less than one-fourth of the normal amount manufactured annually. Dry wine production almost equalled the normal, but this was due to the fact that many of the sweet wine wineries decided to convert their entire crop of grapes into dry wine on account of the large federal tax required in the production and in the marketing of sweet wines and because of fear on the part of the producers that the high selling price of sweet wine might act by way of curtailment of the sale.

## SWEET WINE PRODUCTION IN 1918.\*

The sweet wine production in the state fell off from a normal of 18,000,000 gallons to 4,168,240.63 gallons of all varieties.

The production by counties and varieties is as follows:

County	Port, gallons	Sherry, gallons	Angelica, gallons	Muscat, gallons	Tokay, gallons
Fresno -----	629,941.60	362,595.96	286,402.04	61,988.95	26,006.05
Kings -----		52,370.59		87,643.23	
Los Angeles -----	28,853.91	43,324.86	6,653.73	7,761.61	
Madera -----	71,597.79	92,976.30	31,472.29		
Merced -----	106,776.13	106,576.38			
Sacramento -----	98,918.67	141,783.01			
San Bernardino -----	212,232.41	76,258.93			
San Joaquin -----	728,247.13	706,086.63	94,926.95	21,812.19	
Sonoma -----			3,430.57	2,793.73	
Tulare -----	50,569.26		16,826.39	11,411.34	
Totals -----	1,927,136.90	1,581,972.66	439,711.97	193,413.05	26,006.05

The Vintage of 1918	Gallons
Port -----	1,927,136.90
Sherry -----	1,581,972.66
Angelica -----	439,711.97
Muscat -----	193,413.05
Tokay -----	26,006.05
Total -----	4,168,240.63

\*From the Report of State Board of Viticultural Commissioners, 1919.

This total production of sweet wine for 1918 meant the use of 55,570 tons of grapes, which at an estimated average price of \$25 per ton, brought the growers of the grapes \$1,339,250.

Six thousand cars of wine grapes shipped out of the state meant 90,000 tons of grapes, and at an average selling price of \$30 per ton at the shipping point brought the growers \$2,700,000.

The total returns to the wine grapegrowers of the state for the vintage of 1918 for the grapes loaded at the shipping points was \$10,039,250.

The estimated prices per ton received are conservative and probably low. It will thus be seen that the production of wine grapes in the state in 1918 was 315,570 tons.

#### BRANDY PRODUCTION.

The production of brandy in the state from the vintage of 1918 up to January 1, 1919, was in the neighborhood of 1,000,000 proof gallons, but it is not a factor in the estimate of the value of the wine crop because practically all of it was made for fortification of sweet wines and used immediately in the manufacture of the sweet wines.

It should be stated in connection with the wine data that the price of wines advanced in proportion to the price of grapes, and this was due to a healthy demand at all times for both the sweet and the dry wines of this state. The price realized at the present time for these wines is higher than was ever known before in the history of the state. Limited production, shortage of old stocks almost to depletion and an unusual demand on the part of the public, the falling off of imports and the stimulation of exports were the factors in bringing about high prices for all wines.

*Tax returns on 1918 vintage.* The government tax in the production and in the sale of the 1918 vintage of wine would amount at the present tax rates to approximately \$3,140,000. That portion of the production which yet remains unsold and which is subject to taxation at the double rates of the new revenue bill would increase the aggregate tax money collected by the government approximately \$1,500,000 for one season's production of California wine.

#### Sparkling Wines, 1911-1917.

The manufacture of sparkling wines is now engaging the attention of the wine makers in California and has proved to be successful. The production of naturally fermented champagne in the bottle during the last seven years has varied considerably, the quantity made during this period being estimated as follows:

Year	Bottles
1911	580,000
1912	800,000
1913	1,000,000
1914	1,100,000
1915	732,600
1916	360,000
1917	996,000

The bottling is done in the months of June and July of the following year. No champagne was made in 1918.

#### Grape Juice.

The manufacture of grape juice in this state continues to decrease. The quantity made in 1916 is estimated at about 250,000 gallons, and it is claimed that so far there is no profit in its manufacture. In 1917 and 1918 it is estimated that only 100,000 gallons were made each year.

Many judges consider that some of the Eastern varieties of grapes, such as the Concord, are better suited for the making of grape juice.

#### SUMMARY OF CALIFORNIA VINTAGES, 1908-1918.\*

(For the fiscal year ending June 30.)

Year	Sweet wine, gallons	Dry wine, gallons	Total wine, gallons	Brandy used for fortification
1908.....	16,491,169	27,700,000	44,191,169	4,233,977
1909.....	14,368,025	33,900,000	48,268,025	3,678,376
1910.....	18,086,868	27,400,000	45,486,868	4,702,863
1911.....	18,850,167	26,000,000	44,850,167	4,951,640
1912.....	23,467,444	25,000,000	48,467,444	6,153,131
1913.....	17,927,812	22,000,000	39,927,812	4,671,415
1914.....	17,473,353	26,300,000	43,773,353	4,643,812
1915.....	16,868,374	21,571,000	38,439,374	4,425,747
1916.....	6,578,510	28,000,000	34,578,510	1,156,105
1917.....	20,376,366	20,020,000	40,396,366	4,896,086
1918.....	17,101,971	25,000,000	42,101,971	3,754,564

\*The above figures for sweet wine and brandy are exact; the amount of dry wine can only be estimated, as no complete records are kept. Wines being made in the fall, the vintages belong to the previous year, thus the vintage for the year ending June 30, 1916, was mostly made from August to December, 1915.

#### SUMMARY OF SWEET WINES PRODUCED, BY VARIETIES, 1908-1918.

(Gallons.)\*

(For fiscal year ending June 30.)

Year	Angelica	Frontignan	Lenoir	Madeira	Malaga
1908.....	1,513,534	-----	452	13,316	216,390

\*After fortification.

**SUMMARY OF SWEET WINE PRODUCED, BY VARIETIES, 1908-1918—(Cont'd.)**  
**(Gallons.)**  
**(For fiscal year ending June 30.)**

Year	Marsala	Muscatel	Port	Sherry	Sweet Catawba	Tokay
1908		2,449,211	6,015,052	6,267,323		12,400
1909		2,242,412	5,859,630	5,189,598		31,607
1910		1,767,387	9,051,017	5,690,080		133,132
1911		1,087,411	9,780,864	5,955,886		187,882
1912		2,247,219	9,522,237	8,559,868		81,645
1913		2,070,827	8,334,993	5,619,502		28,725
1914		1,512,727	9,160,980	5,235,102		39,816
1915		1,095,411	9,240,281	5,018,983		50,262
1916		758,436	3,347,957	1,694,884		5,603
1917	27,947	2,550,526	8,989,498	5,541,574		36,510
1918	140,021	1,590,404	6,031,446	7,202,703		56,254

NOTE.—The wine is made in the fall of the previous year, which is the real date of the vintage, but the returns are made for the fiscal year ending June 30.

**Brandy Produced in the United States.**

The following summary shows that almost all the brandy made in the United States is produced by California. In 1917 California produced 7,871,759 gallons, and all other states only 379,338 gallons, and in 1918 California produced 5,295,952 gallons, all other states 61,373, or a total for the United States of 5,357,325 gallons.

The production of brandy has also greatly increased. In 1891 the quantity amounted to only 1,804,712 gallons, but the last five years, with the exception of 1916, when the production fell off, owing to the heavy tax imposed, it has averaged about 7,000,000 gallons, about 4,500,000 of which is used for fortifying the sweet wines.

**Total Fruit Brandy Produced in the United States, 1908-1918.**

For the fiscal year ending June 30	Production of fruit brandy, including apple, peach, and grape, gallons
1908	6,899,823
1909	6,440,857
1910	7,656,433
1911	7,953,131
1912	9,321,823
1913	8,252,874
1914	7,307,897
1915	8,521,951
1916	4,159,352
1917	7,871,759
1918	5,295,952

Under the provisions of "An act to reduce revenue and equalize duties on imports, and for other purposes," approved October 1, 1890, provision was made for the fortification with grape brandy, free of tax, of pure sweet wine, and of wine intended for exportation. This act was amended by the acts of June 7, 1906, which imposed a tax of 3 cents per gallon, on October 22, 1914, the tax was increased to 55 cents per gallon, and another act of September 8, 1916, reduced the tax on brandy used for fortification to 10 cents a gallon.

## Brandy From Other Fruits.

Brandy is also produced from other fruits, and until 1907 was shown separately from grape brandy in the internal revenue returns; since then all brandy is included under the head of "fruit brandy." The quantity, however, is not large; in 1907, the last year the varieties are shown separately, fruit brandy, other than grape brandy, was only 94,558 gallons, while grape amounted to 5,367,489 gallons.

## Variety and Quantity of Fruit Brandy in 1907.

Varieties	Gallons
Prune .....	60,594
Peach .....	21,210
Pear .....	9,339
Apricot .....	2,178
Apple .....	897
Orange .....	280

Brandy was included under "Alcohol" prior to 1891, and included in "All other spirits" after 1910.

\*Not stated in detail after 1910. The quantity includes wines both in casks and bottles.

## Production of Beer, 1913-1918.

By an act approved in April, 1862, a premium was offered for the first 1,000 cases of bottled beer of two dozen each exported, \$1,500, and for the first, second and third succeeding shipment \$1,000, \$700 and \$500 respectively, provided the beer arrived at its destination in good condition.

The amount of beer produced in California during the years 1913-1918 shows a small increase for the last two years. The number of breweries in the state in 1918 was 69.

Year	Number of barrels	Amount of tax paid
1913-----	1,007,326	\$1,007,326
1914-----	973,217	1,053,887
1915-----	937,665	1,406,479

## PART IX.

## IRRIGATION.

**Farms and Irrigation; Description of Irrigation Enterprises; Source of Water Supply; Cost of Irrigation; Irrigated Crops, and Orchards; Irrigation Projects, 1918; Irrigation Districts, 1918; Private Irrigation Systems; Colorado River and Salton Sea; Lake Tahoe; Tulare and Other Lakes; Summary of Agricultural and Irrigated Areas; Irrigation from Underground Waters; Acreage of Irrigated Farms by Counties; Main Ditches, Flowing and Pumped Wells.**

## Farms and Irrigation.

In most sections of California there is usually sufficient rainfall for the maturing of some crops, although there are other sections where no crops can be grown without irrigation. The normal annual precipitation ranges from about 2 inches in the Imperial Valley, in the southeastern part of the state, to about 60 inches along the coast in the northwestern part.

Irrigation is practiced to some extent throughout the state, but the largest part of the irrigated land lies in the southern part of the state and in the Sacramento and San Joaquin valleys.

In 24 of the 58 counties in the state more than half the farms are irrigated. Imperial County has the largest percentage of farms irrigated, 94.6, and Inyo County the next largest, 93.2 per cent. In both 1900 and 1910 the county for which the largest area of irrigated land was reported was Fresno, with an irrigated acreage of 402,318, compared with 283,737 in 1900. In Tulare County 265,404 acres were irrigated in 1910, and in five other counties the area irrigated exceeded 100,000 acres. The summary on pages 243 and 254 shows that in 1910 existing enterprises were ready to supply water to 3,619,378 acres, or 955,274 acres more than were irrigated in 1909. The acreage included in projects exceeded the acreage irrigated in 1909 by 2,826,256 acres, which is more than twice the acreage brought under irrigation in the last decade. This acreage represents the area which will be available for the extension of irrigation in the next few years, upon the completion of projects now under way and without new undertakings.

## Description of Enterprises in 1910.

Name	Acreage irrigated	Per cent distribution
United States Reclamation Service.....	400	*
United States Indian Service.....	3,490	0.1
Irrigation districts.....	173,793	6.5
Cooperative enterprises.....	779,020	29.2
Commercial enterprises.....	746,265	28.0
Individual and partnership enterprises.....	961,136	36.1
Totals.....	2,664,104	100.0

\*Less than one-tenth of one per cent.

United States Reclamation Service enterprises operate under the federal law of June 17, 1902; providing for the construction of irrigation works with the receipts from the sale of public lands.\*

United States Indian Service enterprises operate under various acts of Congress providing for the construction by that service of works for the irrigation of land in Indian reservations.

Carey Act enterprises operate under the federal law of August 18, 1894, granting to each of the states in the arid region 1,000,000 acres of land on condition that the state provide for its irrigation, and under amendments to that law granting additional areas to Idaho and Wyoming.

Irrigation districts are public organizations that operate under state laws providing for their organization and management, and empowering them to issue bonds and levy and collect taxes with the object of obtaining funds for the purchase of construction, and for the operation and maintenance of irrigation works.

Co-operative enterprises are controlled by the water users under some organized form of co-operation. The most common form of organization is the stock company, the stock of which is owned by the water users.

Commercial enterprises supply water for compensation to parties who own no interest in the works. Persons obtaining water from such enterprises are usually required to pay for the right to receive water, and to pay, in addition, annual charges based in some instances on the acreage irrigated and in others on the quantity of water received.

Individual and partnership enterprises belong to individual farmers or to neighboring farmers, who control them without formal organization. It is not always possible to distinguish between partnership and cooperative enterprises, but as the difference is slight this is unimportant.

Irrigation districts, cooperative enterprises and individual and partnership enterprises, which together supply about 72 per cent of the acreage irrigated, are all controlled by the water users. Commercial enterprises, the only other class in the state that irrigates any extensive acreage, supplies 28 per cent.

#### Source of Water Supply.

(Census Reports, 1910).

As in other states, streams are the principal sources of supply of water for irrigating, but in California wells supply much more land than in any other state. Much land receives water from both sources, but most of this is credited to streams. The watersheds of the principal streams are protected by national forests administered by the United States Forest Service which affords to them effective protection against denudation either by forest fires or the unregulated cutting of their timber.

\*See list of reclamation projects, p. 245-246.

Source	Acreage irrigated	Per cent distribution
Streams .....	2,246,722	84.3
Lakes .....	18,470	0.7
Wells .....	350,723	13.2
Springs .....	31,779	1.2
Reservoirs .....	16,410	0.6
Totals .....	2,664,104	100.0

The preceding figures show the extent to which underground water is utilized for irrigation in California. The flowing wells, of which there were 2,361, with a total capacity of 477,343 gallons per minute, irrigated 74,128 acres. The great majority of these wells are in southern California and the San Joaquin Valley, and the land thus irrigated is situated in Kern, Kings, Los Angeles, Orange, Riverside, San Bernardino, Santa Clara, and Tulare counties. Of the 10,724 pumped wells, 5,248 were in the counties named and 4,503 in Fresno, Merced, Monterey, Sacramento, San Benito, San Diego, San Joaquin, and Ventura counties. The pumped wells in these two groups of counties irrigated 258,687 of the 276,595 acres irrigated by such wells in the entire state. Pumping from lakes and streams has also been practiced extensively in many sections of the state, 32,539 acres having been irrigated in this way in 1909.

#### The Cost of Irrigation in 1910.

The following summary shows the total cost of irrigation enterprises up to July 1, 1910, including construction of works and acquisition of rights, but not operation and maintenance, with the average cost per acre, based on the acreage the enterprises were capable of irrigating in 1910:

	1900	1910	Increase, per cent
Cost of irrigation enterprises.....	*\$19,181,610 00	\$72,580,030 00	278.3
Average per acre.....	†13 27	20 05	-----
Estimated final cost of existing enterprises .....		84,392,344 00	-----
Average per acre included in projects.....		15 37	-----

\*Exclusive of those on Indian reservations.

†Exclusive of 242 acres in Indian reservations.

The cost of irrigation systems shows the largest increase of any item, amounting to 278.3 per cent. In the average cost per acre there was also a considerable increase, compared with 1900. The large increased cost of irrigation enterprises is due in a considerable measure to the expensive equipment installed to secure a water supply and protect it from loss by seepage and evaporation, in sections where water is scarce and crop values are high. A number of large enterprises are under construction upon which considerable expenditures have been made, but which are irrigating little land as yet, making the average cost higher than the true average. The average, based on the estimated final cost and the acreage included in projects, \$15.37 per acre, probably more truly represents the average cost per acre of irrigation in California.

In the county showing the lowest average cost, Mono, where much of the irrigated land consists of flooded pastures, enterprises were capable of irrigating in 1910 at \$1.29 per acre. The highest average cost per acre, \$368.40, is in Nevada County, where the unusual cost is due to the fact that many of the ditches now used for irrigation were originally constructed at heavy expense for mining purposes.

#### Irrigated Crops.

(From the Reports of the Bureau of the Census, 1910.)

The information relating to irrigated crops is to some extent incomplete; it shows, however, the relative importance of the different irrigated crops, and is sufficiently complete to afford reliable averages of yields and for comparison with totals for the state.

#### SUMMARY OF IRRIGATED FARMS AND IRRIGATION ENTERPRISES IN 1900 AND 1910.

(From the Reports of the Census Bureau.)

	1900	1910	Increase	Per cent
Number of farms in state.....	72,542	88,197	15,655	21.6

Capacity, gallons per minute.....	*	4,119,575	-----	-----
Acreage irrigated with pumped wells.....	*	276,595	-----	-----
Acreage irrigated with flowing wells.....	*	74,128	-----	-----
Acres irrigated with pumped water from all sources, including lakes and streams.....	*	309,134	-----	-----
Number of pumping plants.....	*	9,297	-----	-----
Engine capacity, horsepower.....	*	128,143	-----	-----
Pumping capacity, gallons per minute.....	*	5,276,298	-----	-----
Total cost of irrigation systems.....	\$19,181,610	\$72,580,030	\$53,398,420	278.3
Average cost per acre.....	13.27	20.05	6.76	51.0

NOTE.—Reservoirs are those filled by collecting storm water, or from watercourses that are usually dry. When reservoirs are filled from streams or wells the primary source is considered the source of supply. The "acre-foot" is the volume of water required to cover one acre to a depth of one foot or 43,560 cubic feet.

\*Not reported in 1900.

## Acreage Yield in 1910.

(From the Reports of the Census Bureau.)

Crop	Total for state	Irrigated		Total for state	On irrigated land

## IRRIGATION PROJECTS IN CALIFORNIA.

*The Orland Project.* This project is in the Sacramento Valley and includes about 20,500 acres in Glenn and Tehama counties, principally in the former. In 1918, 14,764 acres were irrigated and 12,705 acres yielded crops worth \$709,000 or about \$58.75 per acre. Young orchards, not yet bearing, occupied most of the acreage irrigated, but not harvested. The principal crops are alfalfa, pasture, sorghum, small fruits and deciduous fruits, comprising apples, peaches, pears, prunes and apricots.

*Yuma or Laguna Project.* This project is principally in Arizona, but covers about 15,000 acres of the Colorado desert, in Imperial County. The Laguna dam is situated on the Colorado River, about twelve miles above Yuma, and diverts a main canal that serves the California land and then passes under the Colorado River in an inverted siphon. The land on the California side was part of the Yuma Indian reservation, but aside from 4,000 acres reserved for the Indians, was opened to bona fide settlers.

*Klamath Project.* This covers land in Oregon and California, including the lowering of the water level in Tule Lake, in Siskiyou and Modoc counties, and irrigation of the uncovered lake bed.

**Irrigation Projects in the United States.**

<sup>1</sup>Excluding substantial areas (private canals) to which water is furnished under the Warren Act. Data are for calendar year (irrigation season) except on Salt River project data are for corresponding "agricultural year," October, 1916, to November, 1917.

<sup>2</sup>Area Reclamation Service was prepared to supply water.

<sup>3</sup>Irrigated crops. Excludes small areas on few projects cropped by dry farming.

<sup>4</sup>Includes so-called "dry lands" given right to rent water temporarily on account of ample storage.

<sup>5</sup>Includes about 5,000 acres within town sites, 3,000 acres reported "vacant" and probably largely pastured.

<sup>6</sup>Exclusive of relatively small area under private canals supplied Gunnison Water.

<sup>7</sup>Irrigable acreage includes New York Canal, Nampa-Meridian, and Pioneer District lands served project water. Irrigated acreage here reported is limited to area served full water supply, excluding vested right lands given partial service.

<sup>8</sup>Crop reports covered an additional area of 8,789 acres cropped by dry farming, producing crops worth \$47,578, or \$5.42 per acre.

<sup>9</sup>Above figures are for 176 irrigated farms, which included small tracts farmed without irrigation. In addition, crop reports covered 17 farms operated without irrigation, on which 567 acres yielded crops worth \$7,322, or \$12.91 per acre.

<sup>10</sup>Crop reports covered an additional area of 8,739 acres dry-farmed, producing crops worth \$90,550, or \$10.36 per acre.

<sup>11</sup>Includes North Platte Canal & Colonization Co. lands.

<sup>12</sup>\$51.26, excluding 10,100 acres of wild grass pasture and 3,081 acres otherwise not in full production.

**Receipts from the Sale of Public Lands in California for Irrigation Work to  
June 30, 1917-1918.**

	Fiscal year 1917	Total value to June 30, 1917	Fiscal year 1918	Total value to June 30, 1918
Receipts from sale of land*-----	\$249,959 09	\$6,203,791 00	\$177,971 29	\$6,381,762 29
Allotments to June 30.....	204,095 00	3,613,634 98	188,737 00	77,702 43
Net investments to June 30.....	103,545 98	3,082,765 86	3,802,371 98	3,160,468 58

\*Additions to the reclamation fund from the sale of public lands.

This statement shows the amount of money allotted to each project, the amount of money expended on each project to June 30, 1918, and the amount of money allotted to states and expended in the respective states for the same period:

**Statement of Project Allotments and Net Investments in California, June 30, 1918.**

Project	Allotments		Net investment	
	Fiscal year 1918	To June 30, 1918	Fiscal year 1918	To June 30, 1918
Yuma -----	\$86,360 00	\$1,725,211 00	\$57,880 30	\$1,506,117 93

The following table gives a list of all irrigation districts now operating, with data concerning them:\*

Irrigation Districts in Operation November 1, 1918.

Number	Name of district	County	Year organized	Area, acres	Bonds voted	Address of secretary
1	Alpaugh	Tulare	1914	7,576	\$280,000	Alpaugh.
2	Alta	Tulare-Fresno	1888	130,000	543,000	Dinuba.
3	Anderson-Cottonwood	Shasta	1914	32,500	1,055,000	Anderson.
4	Baxter Creek	Lassen	1916	11,000		Lassen.
5	Big Rock Creek <sup>1</sup>	Los Angeles	1890	30,000	253,000	Yermo.
6	Blackrock	Inyo	1915	1,210		Big Pine.
7	Browns Valley <sup>2</sup>	Yuba	1888	44,328	140,000	Browns Valley.
8	Cardiff	San Diego	1916	700		Cardiff by the Sea
9	Carmichael	Sacramento	1915	3,113	90,000	R. F. D. 3, Sacramento.
10	Fairoaks	Sacramento	1917	4,000	200,000	Fairoaks.
11	Happy Valley <sup>3</sup>	Tehama	1891	18,300	615,000	Olinda.
12	Honey Lake Valley	Lassen	1916	33,150		Amadee.
13	Imperial	Imperial	1911	576,690	6,000,000	El Centro.
14	Jacinto	Glenn	1918	19,600		Jacinto.
15	La Mesa, Lemon Grove and Spring Valley <sup>4</sup>	San Diego	1913	14,794	1,232,500	La Mesa.
16	Lindsay-Strathmore	Tulare	1915	15,775	1,400,000	Lindsay.
17	Little Rock Creek	Los Angeles	1892	3,000	60,000	Little Rock.
18	Long Valley Creek	Lassen	1916	34,000		Doyle.
19	Maxwell	Colusa	1918	8,000	270,000	Colusa.
20	Modesto	Modesto	1887	81,183	2,215,021	Modesto.
21	Mojava River	San Bernardino	1917	27,665		Victorville.
22	Newport Heights	Riverside	1918	1,503		Santa Ana.
23	Newport Mesa	Riverside	1918	670		Santa Ana.
24	Oakdale	Stanislaus-San Joaquin	1909	74,146	2,399,500	Oakdale.
25	Palmdale	Los Angeles	1918	4,000		Palmdale.
26	Paradise	Butte	1916	11,200	350,000	Paradise.
27	Princeton-Codora-Glenn	Glenn-Colusa	1917	18,200		Willows.
28	Provident	Colusa-Glenn	1918	20,756		Willows.
29	Redrock Creek	Lassen	1918	3,700		Ravendale.
30	San Ysidro	San Diego	1911	485	25,000	San Ysidro.
31	Scott Valley	Siskiyou	1917	5,540		Fort Scott.
32	Southern Lassen	Lassen	1915	21,500		Doyle.
33	South San Joaquin	San Joaquin	1909	71,050	3,835,000	Manteca.
34	Stratford	Kings	1915	9,200		Stratford.
35	Surprise Valley	Modoc	1918	17,500		Fort Bidwell.
36	Terra Bella	Tulare	1915	12,000	1,000,000	Terra Bella.
37	Tulare <sup>5</sup>	Tulare	1889	39,360	500,000	Tulare.
38	Turlock	Stanislaus-Merced	1887	175,566	2,572,800	Turlock.
39	Tranquillity	Fresno	1917	11,300		Tranquillity.
40	Victor Valley	San Bernardino	1917	71,517		
41	Walnut <sup>6</sup>	Los Angeles	1893	8093		Walnut.
42	Waterford	Stanislaus	1914	14,434	465,000	Waterford.
43	Webster	Madera	1915	15,000		
44	Westside	San Joaquin	1915	11,700	410,000	Tracy.
	Total acreage			1,793,881		
	Total bonded indebtedness <sup>7</sup>				\$25,910,821	

\*Sixth Biennial Report of the Department of Engineering of the State of California, 1918.

<sup>1</sup>Big Rock Creek District was dormant for many years; revived in 1914.

<sup>2</sup>Browns Valley District paid off its bonds at 30 cents on the dollar.

<sup>3</sup>Happy Valley District revived in 1917. Only \$280,000 of its bonds, required for present needs, have been validated.

<sup>4</sup>This district's bonds have never been validated.

<sup>5</sup>Tulare District bought up its bonds at 53 cents and burned them in 1903.

<sup>6</sup>Walnut District is the only one of the early organizations which has not had trouble. It never issued bonds.

<sup>7</sup>Less \$640,000, Browns Valley and Tulare districts bonds paid and canceled.

## Reclamation Districts.\*

During the life of the Reclamation Board, that is, since May, 1912, many thousands of acres of land have been reclaimed in the Sacramento and San Joaquin valleys by private capital, usually under the jurisdiction of a reclamation district. Plans for all this work have been passed upon by the Reclamation Board, which has required that they conform to the general flood control schemes as modified and perfected.

## Acreages Reclaimed and Levees Built by Some of the Largest Districts.

The following list gives the acreages reclaimed and the lengths of levees built by several of the largest reclamation districts which have either completed or commenced reclamation construction since the adoption by the state of the Sacramento Valley Flood Control plan:

Reclamation district	Acres	Miles of levees
Sacramento River West Side Levee District.....	107,060	49.80
Reclamation District No. 1500.....	63,735	59.70
Reclamation District No. 1000.....	53,040	41.28
Reclamation District No. 1001.....	31,420	36.46
Reclamation District No. 1600.....	6,150	17.30
Reclamation District No. 999.....	23,855	35.64
Reclamation District No. 900.....	10,400	18.25
Reclamation District No. 1002.....	5,830	12.90
Several delta islands.....	26,915	79.43
Totals .....	328,345	350.70

Reclamation and construction work during the period of the Great War has been considerably reduced, yet private interests have spent about \$2,000,000 upon reclamation works during the fiscal year ending June 30, 1918. This was spent principally by nine districts as hereinafter given in some detail.

## Private Irrigation Systems.†

The following are a few of the most important of the very large number of private systems in various parts of the state:

*California Development Company.* This company diverts water from the west bank of the Colorado River close to the Mexican border. Its main canal passes through a portion of the Mexican territory of Lower California, where about 100,000 acres are served. It enters the state again at about sea level, and covers about 400,000 acres, mostly below sea level, in the Imperial Valley, of which upward of 225,000 acres are irrigated. The company does not own any of the land, most of which has been taken up under the Desert Land Act.

*San Diego Flume Company.* This system, which is typical of the coast region of southern California, irrigates about 7,000 acres to the north and east of the city of San Diego from the San Diego River and the storage reservoirs.

*Riverside Water Company and Gage Canal Company.* These two systems serve the valuable lands between the south bank of the Santa Ana River and the hills from the section east of Colton, through the

\*Report of California Reclamation Board, 1918.

†Report of the State Water Commission of California, 1916.

Riverside district, in San Bernardino and Riverside counties, but are in no way connected with each other. The value of the entire system, which includes the municipal supply of Riverside, is estimated at \$2,500,000, the irrigating portion alone being valued at nearly \$1,000,000.

The Gage Canal Company diverts water from the Santa Ana River; its flow is largely augmented during the summer by numerous artesian wells and pumping plants.

*Kern County Land Company.* The Kern County Land Company is interested in numerous canal projects and corporations, taking water from both sides of Kern River, irrigating lands in what is called the Kern delta, lying south, west, and southwest of Bakersfield. Of these lands there are about 80,000 acres in alfalfa, 12,000 acres in grain, 10,000 acres in pasture, wild grass, and 15,124 acres in orchards, vines, gardens, etc.

*Kern Valley Irrigation Company.* The Kern Valley Water Company's canal, belonging to Miller & Lux, irrigates the riparian lands lying between Buena Vista Lake and Tulare Lake. About 63,000 acres of this land are in cultivation, mostly in alfalfa.

*Fresno and Consolidated Canals Company.* These two systems, although kept separate, are operated by the same people and cover practically all the irrigated lands in Fresno County, amounting to about 360,000 acres. The points of diversion for the various canals are all along the west bank of the Kings River, close to where it enters the valley.

The Consolidated includes the Fowler Switch and the Centerville and Kingsburg canals, as well as a majority of the stock of the Emigrant canal. The latter is on the lower Kings River, and diverts water from the river six miles west to Kingsburg to irrigate lands on the Laguna de Tache Rancho, which belongs largely to this company.

The Consolidated has later priorities on the river, and its flow is cut off from the middle of June to August 1, so that its rights are not so valuable as the Fresno canal rights. An annual charge is made for the maintenance of the main canals, amounting to 62½ cents per acre under the Fresno and 75 cents per acre under the Consolidated. The lateral ditches are owned and controlled by the irrigators. No measurements are made to users, each irrigator taking what he needs in accordance with the rights held by him. Considering its area, it is the most highly developed district in the state.

*The San Joaquin and Kings River Canal and Irrigation Company.* This system diverts water from the west bank of the San Joaquin River about 1½ miles north of the town of Mendota, in Fresno County. It is the oldest large canal in the valley, having been organized in February, 1871. The area tributary to it extends for seventy miles along the west bank of the river, in Fresno, Merced, and Stanislaus counties. The company belongs to Miller & Lux, who have riparian rights on the river, and their own lands are very largely included.

*The Crocker-Huffman Land and Water Company.* The Merced River furnishes the supply for the 220,000 acres irrigable from its canals. These lands extend from the foothills, near where the river enters the valley, to the country surrounding the city of Merced and between that city and Livingston.

*The Butte County and the Sutter County Canals.* These two canals are controlled by the same people, using the same main canal, but are separately incorporated. The Butte canal serves the area in Butte County and the Sutter canal serves that in Sutter County. This combined system covers about 80,000 acres, 30,000 in Butte and 50,000 in Sutter County, composed of lands between the Feather River, the Marysville Buttes, and the swamp lands along the Sacramento River south to where the slough which leaves the Feather River near Marysville joins the Sutter basin.

*Sacramento Valley Irrigation Company.* This is a recent enterprise, backed by large Eastern financial interests, which have secured the rights of the Central Irrigation District by the purchase of all outstanding district bonds for 35 per cent of their par value. They have secured control, also, of 100,000 acres in the above district, and are carrying on extensive work in preparing for the irrigation and drainage of the 225,000 acres which will be included in their system.\*

#### Private Irrigation Enterprises Since the Formation of the Water Commission.

The preceding paragraphs give some of the largest of the private irrigation systems in operation before the commission came into existence. Since that time, several private individuals or concerns have applied to the commission for permits to appropriate water. These are not irrigation districts in the legal sense of the term, but are enterprises by which it is proposed to water large private holdings, or sell water to consumers or both. As in all other cases, the commission can not foretell how many of them will be carried to actual completion. They are about twenty-four in number.

#### Imperial Valley and the Salton Sea.

The Colorado River is the division line between California and Arizona. It empties into the Gulf of California about sixty miles below Yuma, Arizona. The Colorado has been called the Nile of America, as it is subject to a large rise annually. Its waters have turned the desert lands of Imperial Valley into fertile lands, and more will be reclaimed by the Yuma project of the United States Reclamation Service.

The Salton Sea, or sink, originally formed a part of the Colorado desert, which comprises an area of nearly 2,000 square miles. The desert comprises two fertile valleys, one in Riverside County, known as the Coachella Valley, the other as Imperial Valley, in Imperial County. Salton Sea, which partly fills the sink, lies between the two valleys. On December 31, 1908, its surface was 206 feet below mean sea level, and was nearly 45 miles long and from 9 to 15 miles wide, its maximum depth 67 feet and its area about 443 square miles.

In 1891 the Colorado overflowed into Salton Sink; in 1905 the flood into the sink was repeated on a much larger scale. The old channel of the Alamo River was transformed into a deep, wide gorge, and another channel, now called New River, was formed. Practically all the water received by Salton Sea enters through Alamo and New rivers, but chiefly through the former. These rivers run through Imperial Valley and are drainage channels for waste water from irrigation systems and power plants.

\*See "Irrigation in California," by F. W. Roeding, United States Department of Agriculture. See also the Report of the State Water Commission of California, 1917.

## Lakes.

There are several good sized lakes in the northeastern part of the state, namely, Lower Klamath Lake, near Brownell, which has an area of about 21,000 acres; Tule, Clear, Goose, and Upper, Middle and Lower Alkali lakes. All of these are shallow and more or less alkaline. Farther south there are the Eagle and Honey lakes, the water of the latter sweet, and the former rather alkaline.

South of these is Lake Tahoe, at an elevation of 6,000 feet, with a surface area of about 250 square miles, partly in California and partly in Nevada. It has an average depth of about 1,000 feet, and is the source of the Truckee River.

Mono and Owens lakes, like many others, have no outlet, and are strongly alkaline.

Tulare Lake is a shallow body of water, about thirty miles south of Fresno and forty miles northwest of Bakersfield. In 1852-1854 the area was nearly 1,000 square miles, the lake being full, and about 35 feet deep. The flood of 1867 was the last to fill the lake to overflowing and about 1870 it began to recede, until in 1898 the lake bed became practically dry, brought about by the water being diverted for irrigation and light precipitation for a number of years. After partly refilling in 1901 it became completely dry in 1905, and in the early spring of 1906 was entirely under cultivation. On March 15, 1906, the first water reached the lake bed at the mouth of the Kings River and spread over a large area. A few days later water from Kaweah and Tule rivers reached the lake. On June 1 the water was 7 feet deep and covered about 200 square miles. On June 23 overflow water from Kern basin cut through the sand ridge to the south and flowed into the lake. On August 4 the water reached its greatest height for the year 1906, and the lake had an area of about 300 square miles and a maximum depth of 12.7 feet. The total rise of the lake that year was 10.8 feet. In November, 1907, the lake had an area of about 274 square miles, a depth of about 12.4 feet, and an average length of 20 miles, and a width of 13.5 miles. The lake reached its greatest height in July of 1907, when it had maximum depth in the summer of nearly 14 feet. Since then it has been subsiding, and is about 11 feet deep. It is probable that the lake will continue to fluctuate very much as in the past, but whether it is to fill and subside alternately are questions of great importance.

The sudden reappearance of the lake resulted in the loss of millions of dollars, but permanent reclamation is ultimately hoped for.\*

Buena Vista Lake is the outlet of Kern River, and is connected with Tulare Lake by sloughs.

Clear Lake, in Lake County, is the only natural body of sweet water in the Coast Range worthy of consideration. It has a surface area of 64 square miles, and is the source of Cache Creek, which enters the Sacramento River near Woodland.

\*For further valuable details, see Water Supply Paper, Part XI, by W. R. Clapp and F. F. Henshaw, United States Geological Survey.

# IRRIGATION RESOURCES OF CALIFORNIA.

(Compiled from the Report of the Conservation Commission of California, 1912.)

## Summary of Agricultural and Irrigated Areas in Northern California.\*

Division	Valley agricultural land, acres	Valley plains, acres	Foothill agricultural land, acres	Areas irrigated, acres
Northern coastal counties.....	503,000	-----	-----	2,290
North central mountain valleys.....	435,000	-----	-----	99,910

## PART X.

TRANSPORTATION BY WATER, RIVER TRAFFIC AND  
PUBLIC ROADS.

**The Sacramento River—Flood Control; Navigability of the Sacramento River; Traffic on the Sacramento, San Joaquin and Mokelumne Rivers; Number of Vessels, Registered Tonnage; Number of Passengers; Navigable Streams, Length and Depth at Low Water. Public Roads and Motor Tractors—Good Roads and Highways 1918; Mileage of Roads by Counties; Increase of Motor Vehicles in United States; Number of Automobiles and Motorcycles in California by Counties, 1918; Motor Tractors, 1916-1918.**

## TRANSPORTATION BY WATER.\*

The largest volume of unused water in California comes from the Sacramento and San Joaquin valleys, and it is here that the greatest development in the future will take place. It is not believed that this increased use of water will seriously injure navigation interests, because a large percentage of the water diverted will return to the streams as waste seepage.

The complete utilization of these two rivers will give California the largest rural population of any state in the Union. Whatever expenditure is necessary to protect navigation interests, and enable this to be brought about should be made. Even if it requires the construction of locks and the canalizing of both streams, the improvements will be well worth their cost, and as it is a recognized field for the expenditure of government appropriations, a proper presentation of the situation should prove successful. The above is the opinion of such a high authority as Prof. Elwood Mead.

San Francisco Bay, which has an area of about 450 square miles, is by far the most important harbor of the state.

## The Sacramento and San Joaquin Valleys.

The greater portion of the arable section of California is comprised in an immense valley about 400 miles long and 40 miles wide. It is inclosed on the east and west by the Sierra Nevada and Coast Range mountains, respectively. The two converge above Red Bluff in the north, while the southern boundary is formed by the Tehachapi Range, joining the Coast Range and the Sierra Nevada below Bakersfield. On the earlier maps of the United States Geological Survey this valley is called "The Great Interior Valley." Today it is known in its northern part as the Sacramento and in its southern part as the San Joaquin Valley, the first containing about 3,000,000 acres and the latter about 7,000,000 acres. There is no distinguishable dividing line between the two, though the Cosumnes River is usually accepted as such line.

\*See Supplemental Report on Flood Control of the Sacramento River, submitted by Mr. Curry, House of Representatives, House Report No. 616.

The upper portion of the Great Valley is drained by the Sacramento River, flowing south, and the lower portion by the San Joaquin, flowing north. The two rivers have a common delta, and their main streams, flowing on opposite sides of Sherman Island, empty side by side into Suisun Bay, an arm of San Francisco Bay, 61 miles from the sea. Because of their common delta and the difference in volume of their floods, the San Joaquin in the lower 45 miles of its course is subject to flood and injury from the Sacramento.

In the early pioneer days the Sacramento River was a perfectly clear stream with pebbly bottom. From 1850 to perhaps 1865 it was navigable at all seasons of the year for seagoing craft drawing from 9 to 13 feet of water up as far as Sacramento and, for the earlier part of the period named, some little distance beyond Sacramento. Indeed, most of the steamers which plied on the river in those days had to be seagoing craft, for they made their way to California from east Atlantic ports around Cape Horn or through the Straits of Magellan.

#### Sacramento River Flood Control.

What the completion of the Sacramento River flood-control project means to the state and the nation is indicated by the statement that only through this plan can flood control of the Sacramento River be secured; and that only through flood control thereof can the following results be attained:

(a) Restoration and maintenance of navigability of the Sacramento River, on which, in earlier days, ocean freighters drawing 13 feet of water used to deliver their cargoes at Sacramento city, 125 miles from the sea, at all seasons of the year.

(b) Protection of the San Joaquin River, which has a common delta with the Sacramento and which is threatened by floods from the Sacramento up to and including the city of Stockton, at the practical head of navigation, 45 miles from the river's mouth, 106 miles from the sea.

(c) Maintenance of an inland waterway system, of which the two navigable rivers must be necessarily main arteries. Upon such a waterway system depends in large measure future development of the Sacramento and San Joaquin valleys and the commerce of the San Joaquin today is limited practically to that stretch of the river lying between its mouth and the city of Stockton, a distance of 45 miles, the Government maintaining therein, under existing project, a channel depth of 9 feet. The river is navigable, however, for 15 miles above Stockton. The navigability of the upper river has been practically destroyed by the demands made upon its sources of supply for water for irrigation. In the San Joaquin Valley the volume of available water is less and the quantity of land to be irrigated much greater than in the Sacramento Valley.\*

This river is formed by numerous tributaries draining the Trinity and Warner mountains in northern California, the principal streams in its upper course being the McCloud, Fall, Pit, and Sacramento proper. From its lowest junction with the Pit the river flows about 320 miles in a southerly direction and empties into Suisun Bay at Collinsville. It has a total drainage area of 27,100 square miles, including the Feather River. Its extreme flood discharge ranges from 278,000

\*See Supplemental Report on Flood Control of the Sacramento River, submitted by Mr. Curry, House of Representatives (House Report No. 616), 1916.

second-feet at Red Bluff, the head of navigation, to nearly 600,000 second-feet at Collinsville. The upper end of the tidal reach is a little above Sacramento, 60.7 miles from the mouth. The fall between the mouth and Sacramento is about 0.1 foot per mile at low water, and average width of banks is from 400 to 1,500 feet. Between Sacramento and Colusa, 150.7 miles from the mouth, the average width between banks is from 300 to 600 feet. Between Colusa and Chico Landing, 202 miles from the mouth, the average width between banks is from 500 to 1,000 feet. Between Chico Landing and Red Bluff, 254.4 miles from the mouth, the average width between banks is from 500 to 1,000 feet. Between the mouth and Colusa the flow is sluggish. Above Colusa the current gradually becomes swift, reaching 6 miles per hour over rapids near Red Bluff.

#### Navigability of the Sacramento River.

That portion of the Sacramento River below Red Bluff is considered a navigable stream.

Between Chico Landing and Sacramento the annual tonnage handled by river boats has averaged 120,000 tons of an aggregate annual value of \$6,000,000, but the tonnage handled between Red Bluff and Chico Landing has been relatively very light and constantly tending to decline.

The Sacramento River has a good navigable channel below Colusa. The following shows the low-water depths below Red Bluff, the head of navigation.

Below Sacramento, 64 miles, 7 feet minimum depth.

Sacramento to Colusa, 90 miles, 4 feet minimum depth.

Colusa to Chico, 57 miles, 3 feet minimum depth.

Chico to Red Bluff, 52 miles, 3 feet for about 6 months;  $1\frac{1}{2}$  to 2 feet for about 6 months.

All of the Sacramento River that is used for navigation purposes is under improvement, and hence all of the tonnage may be considered affected by the improvement. The usual limit of drafts for loaded boats is  $6\frac{1}{2}$  feet up to Sacramento, 4 feet up to Colusa, and 3 feet up to Chico Landing. Boats using this river as a rule load with any class of freight that is offered, and do not restrict themselves to any particular class of traffic.

*Commercial Statistics.*—The principal items of commerce for the calendar year 1917 consisted of grain and millstuffs, 24 per cent; merchandise, 20 per cent; fruit and vegetables, 15 per cent; oil, 7 per cent; and lumber, 4 per cent. Increase in value was due to general increase in cost of all commodities. Navigation was possible during the entire year.

#### RIVER TRAFFIC.

##### Sacramento River.

Sections of the river	Distance, miles	Place	Miles from mouth of river
Mouth of river to Sacramento	60.7	Collinsville -----	0
Sacramento to Colusa-----	90	Sacramento -----	60.7
Colusa to Chico Landing-----	51.3	Vernon -----	81
Chico Landing to Tehama-----	37	Colusa -----	150.7
		Chico Landing -----	202
Total-----	239	Red Bluff -----	254.4

## COMPARATIVE STATEMENT, 1913-1917.

## Sacramento River.

Calendar year	Short tons	Value	Passengers
1913 -----	733,594	\$35,856,791	212,114
1914 -----	721,090	38,211,760	175,485
1915 -----	766,935	58,027,703	191,416
1916 -----	875,780	46,908,093	115,666
1917 -----	947,690	96,820,992	57,797

The high class of freight handled on the San Joaquin and Sacramento rivers is a noticeable feature, the value averaging \$50 per ton, almost the highest, if not the highest, reported on any river in the United States. Ninety per cent of all freight between Sacramento and San Francisco and between Stockton and San Francisco is handled by boat, the average rate being 35 per cent less than by rail.

In the lower part of the Sacramento and San Joaquin valleys there are islands varying in area from 1,500 to 43,000 acres, most of which have been reclaimed for agricultural purposes. This overflow land (swamp land) is probably as good and as productive as any in the state of California. Reclaimed lands that are improved, *i. e.*, hop vineyards, orchards, asparagus and alfalfa lands, etc., are now valued as high as \$300 or more per acre, while the average value of the reclaimed land along the 65 miles of the river below Sacramento is about \$200 per acre.

## NUMBER OF VESSELS, TONNAGE, AND PASSENGERS, 1917.

The freight and passenger traffic on the Sacramento River is handled by craft which operate on this stream exclusively, and by craft which operate part of the time on other streams (*i. e.*, San Joaquin and Mokelumne rivers), as follows:

## Number of Vessels, Tonnage, and Passengers, 1917.

Classes	Number	Net tonnage reported	Passengers
Registered:			
Steamers -----	39	14,059	35,937
Gas -----	93	2,800	18,407
Sailing -----	12	619	-----
Unregistered:			
Gas -----	28	-----	3,453
Sailing -----	-----	-----	-----
Unrigged (tonnage reported) -----	43	12,502	-----
Unrigged (tonnage not reported) -----	13	-----	-----
Totals -----	228	29,980	57,797

## San Joaquin River, 1913-1911.

The upper branches of the San Joaquin River rise in the Sierra Nevadas and unite at a point 25 miles southeast of the Yosemite Valley to form the main river, which flows southwesterly to Herndon, 68 miles, thence westerly to Firebaugh, 50 miles; thence northwesterly to the mouth of Stockton channel, 162 miles; and thence in the same general direction to Suisun Bay, 42.5 miles, its total length being about 325

miles. Stockton Channel is 2.5 miles long and connects the city of Stockton with the river. Mormon Channel is a branch of Stockton Channel and extends through the southerly part of Stockton 1.7 miles to the head of navigation at Center Street. Mormon Slough extends upstream from the head of navigation in Mormon Channel and is the south branch of Calaveras River. Fremont Channel and McLeod Lake form an arm of Stockton Channel near its upper end and extend northeasterly 2,000 feet, being an important part of the city's harbor. The total drainage area, exclusive of that which ordinarily drains into Tulare Lake, is about 15,500 square miles, of which about 2,400 is included in the Mokelumne River. Tidal influence is felt over the lower 65 miles. The river decreases in width from 4,000 feet at its mouth to 200 feet at the mouth of Stockton Channel, and from here to Hills Ferry it has an average width of 200 feet between banks. At extremely low water the flow at places between Herndon and San Joaquin Bridge, 58.5 miles above the mouth, is not continuous, due to diversion through irrigation canals and sloughs.

All depths are referred to mean lower low water. The following table shows the tide and flood conditions prevailing:

Place	Miles from mouth of river	Range in feet			
		Mean tidal*	Extreme tidal	Ordinary flood	Extreme flood
Collinsville -----	-----	5.8	7.0	8.0	9.0
Mouth, Stockton Channel -----	42.5	3.0	4.0	8.5	13.7
San Joaquin Bridge -----	58.5	1.1	1.5	17.0	21.0
Hills Ferry -----	128.5	-----	-----	12.0	16.0

\*Mean lower low water to mean higher high water.

#### San Joaquin River, 1913-1917.

*Commercial Statistics.*—Practically all freight is transported over that portion of the river under improvement. The draft of loaded vessels is seldom over 7 feet. Navigation was possible during the entire year.

Calendar year	Short tons	Value	Passengers
1913 -----	820,399	\$38,341,174	107,687
1914 -----	772,156	35,479,741	207,249
1915 -----	831,234	36,358,240	189,667
1916 -----	824,222	42,179,160	182,486
1917 -----	1,890,856	50,367,760	206,131

## Number of Vessels, Registered Tonnage, and Number of Passengers, 1917.

Totals -----	138	13,078	206,131

## The Feather River.

The Feather River rises in the Sierra Nevadas, flows southwesterly about 125 miles, and empties into the Sacramento River about 20 miles by river above the city of Sacramento. Its total drainage area is 6,200 square miles, and its extreme flood discharge is nearly 250,000 second-feet and low-water discharge 1,600 second-feet. It has a fall of about 1.15 feet per mile from Marysville to its mouth (28.3 miles by river) and an average width of 400 to 800 feet. In places the current is very swift.

*Commercial Statistics.*—Heretofore commercial statistics for the Feather River have been combined with those of the Sacramento River and not kept entirely separate.

During the calendar year 1916 the unusually small tonnage is believed to be due to a combination of circumstances—a “strike” of river men, delay in getting the harvest to the river before the season of low water, etc., in 1917.

In 1917 the tonnage during the calendar year was smaller than usual, as, due to low water condition, the seasonal period of navigation was unusually short. No passengers were carried.

Calendar year	Short tons	Value
1912 -----	2,729	\$159,046
1913 -----	3,332	207,366
1915 -----	2,906	-----
1916 -----	392	-----
1917 -----	135	13,395

**Tonnage of All Freight and of Grain and Live Stock Carried on San Joaquin and Sacramento Rivers, 1900-1908.**

(Tons of 2,000 pounds.)

Calendar year	San Joaquin River, all freight, tons	Sacramento River, all freight, tons
1900	270,887	461,314
1901	357,746	452,965
1902	322,000	404,900
1903	366,038	383,724
1904	360,486	353,164
1905	373,186	365,957
1906	440,300	375,000
1907	736,472	367,224
1908	509,233	394,945

**Mokelumne River.**

The Mokelumne River rises near the crest of the Sierra Nevadas, flows a total distance of 140 miles via the North Fork or 145 miles via the South Fork, and empties into the San Joaquin River 20 miles above the mouth of the latter. Its course is southwesterly 119 miles to the town of Woodbridge; thence northerly about 9 miles to the Galt-New Hope Bridge; thence northwesterly, westerly, and southerly 8 miles by river to New Hope Landing, where it separates, afterwards reuniting below in a southerly direction 9 miles via the North Fork and 14 miles via the South Fork (forming Staten Island), 4 miles from San Joaquin River.

The river lies generally about midway between the cities of Sacramento and Stockton. It has a drainage area of about 2,400 square miles. The discharge varies from less than 100 second-feet from September to December to 3,000 from April to July. The average slope is about 0.5 foot per mile. The average width varies from about 1,000 feet at the lower end to about 100 feet at the head of navigation at Galt-New Hope Bridge. It is tidal over its navigable length, 35 miles, including both forks. Over the remaining or upper portion the flow is rapid.

*Commercial Statistics.*—The commerce for the calendar year 1917 amounted to 78,954 tons, showing a slight decrease over that of 1916, but the total value was \$6,806,410, showing an increase of about 30 per cent, due to increased costs of nearly all commodities. Of the total tonnage barley was about 15 per cent; beans, 8 per cent; corn, 10 per cent; general merchandise, 16 per cent; onions, 12 per cent; and potatoes, 21 per cent.

**Comparative Statement.**

Calendar year	Short tons	Value	Passengers
1913	90,585	\$5,079,932	923
1914	69,783	3,045,870	1,459

## PUBLIC ROADS.

The total mileage of all rural public roads in the United States, outside the limits of incorporated towns and cities, in 1916, was estimated as about 2,452,000 miles, and the total surfaced roads, 277,000 miles. In California the total mileage of all rural public roads in 1916 was estimated as 61,038 miles, of which 13,000 was surfaced.

The practice of improving the earth roads by the use of oil in California has been, to a large extent, discontinued, and this has had the effect of cutting down the mileage of that class of roads considerably, and so reducing the total mileage of improved roads. The information from some of the counties is not altogether satisfactory, but the figures are as accurate and complete as it was possible to obtain at the time.

## The State Highway.

In 1909 the State Highway Act appropriated the sum of \$18,000,000 for the construction of highways in California. At the election in November, 1910, on the \$18,000,000 bond issue, out of a total of 173,806 votes, there was a majority in favor of the bonds of 12,786 votes. On November 7, 1916, the voters of California voted a second bond issue of \$15,000,000 for state highways. With a total of 679,346 votes cast, there was a majority of 405,132 in favor of the highway bonds, a majority of nearly 4 to 1, and more than thirty times the favorable majority at the election of 1910. This is a showing of the increase of interest in the road problem and must in part at least be considered a vote of approval by the people of the state highways already completed under the \$18,000,000 bond issue. Up to April 16, 1916, \$16,119,583 had been expended with very satisfactory results, as the following summary will show:

Miles of road surveyed.....	2,280
Miles of right of way secured.....	1,705
Acres of right of way secured.....	13,327

## Miles of Highway Constructed.

Oiled macadam.....	129
Concrete pavement.....	933
Asphalt.....	33
Graded.....	395
Total.....	1,490
Miles of road paved by counties and taken over, improved and maintained by the state.....	108

## State Highway Mileage, January 1, 1916.

Total all surfaced roads in state (approximate).....	13,000
Total all public rural roads in state.....	61,038
Percentage of surfaced roads in state.....	21.3
State and state-aid roads built in 1915.....	527
Total all state and state-aid roads built to January 1, 1916.....	1,651
Roads maintained with state aid, 1915 (approximate).....	1,000

The maintenance of the state highways is of ever growing importance.

At the close of the fiscal year in 1918, there were under maintenance 1,450 miles of highways constructed by the commission, 167 miles of paved highway which were on state highway routes and which had been taken over from various counties, and 683 miles of mountain

roads, most of which were under state control prior to the formation of the California Highway Commission, a total of 2,300 miles of roads and highways.

The highways built by the commission have always attracted travel to them and in a number of instances, much money should be spent now in widening the pavement and in constructing shoulders to take care of the greatly enhanced traffic.

Not only have the vehicles increased greatly in number but the loads carried have increased enormously in weight and because of the non-enforcement of the terms of the Motor Vehicle Act, it is the rule rather than the exception to overload the motor trucks, and the roads are doing much more duty than they were intended to do when constructed.

The state highway maintenance work is financed wholly by the Motor Vehicle Fund which is derived from the fees paid annually by motor vehicle owners and operators into the state treasury.

On July 1 the people voted by an overwhelming majority for a third good roads bond issue of \$40,000,000, which will bring the total mileage up to 4,500.

Under the present law, after deducting from the total receipts of the Motor Vehicle Department the operating expenses of that department, the balance remaining is divided into two equal parts, one part going to the State Motor Vehicle Fund for use in maintaining the state highways, the other part being paid to the several counties of the state for their use in maintaining the county roads.

The following shows the amounts available for state highway purposes from the State Motor Vehicle Fund for each of the several calendar years since the Motor Vehicle Fund has been operative:

1914	-----	\$591,223 57
1915	-----	932,492 78
1916	-----	964,784 65
1917	-----	1,247,268 80
1918	-----	1,395,817 89
Total	-----	\$5,131,592 69
Assigned to State Engineer	-----	586,450 86
Total available for use of California Highway Commission	----	\$4,545,141 83

See First Biennial Report of the California Highway Commission, 1918.

TABLE XXXIX.

## Mileage of Public Roads Outside of Incorporated Cities and Towns, 1914.

County	Total mileage of all roads	Surfaced roads							Increase in sur- faced mileage over 1909	Graded and drained earth
		Concrete	Macadam	Bituminous macadam	Gravel	Sand clay	Oiled earth	Total of sur- faced roads	Percentage of roads surfaced

<sup>1</sup>Concrete mileage reported by state geologist, balance 1909 figures. <sup>2</sup>No report; 1909 mileage.

NOTE.—For mileage, cost and description of roads in 1904 and 1909, see Report for 1915, pages 251-252.

## MOTOR VEHICLES.

During the past ten years the state registration of motor cars, including commercial vehicles in the United States, has increased 5,000 per cent, or from about 48,000 in 1906 to 2,445,664 in 1915. In 42 states of the Union all, or the major portion, of the motor vehicle revenue must be expended for the construction, improvement, or maintenance of the public roads, or for the maintenance of the state highway department. The tendency to put the expenditure of this large and increasing revenue directly in the hands of the state highway departments of the various states is very marked. In 20 states all, or the major portion, of the net motor vehicle revenues are expended by or under the supervision or direction of the state highway department. In seven states, including California, one-half to one-fourth of the state motor vehicle revenues are expended either by or under the direct supervision of the state highway department, and the remainder by the local authorities. The last two years there were eight states having upwards of 100,000 motor cars registered.

## Automobiles in Eight Leading States in 1917.

(Compiled by U. S. Department of Agriculture.)

	Automobiles*	Motorcycles	Population per motor car	Total revenue
1. Ohio -----	346,772	21,892	15	\$1,766,426
2. Illinois -----	340,292	13,740	18	1,588,834
3. New York -----	338,682	28,775	30	4,284,144
4. California -----	306,916	30,489	10	2,846,030

## Motor Vehicle Registration in the United States, 1917.

	Total United States, 1916	Total United States, 1917
Automobiles -----	3,394,314	4,792,205
Motorcycles -----	250,820	257,522
Owners' and chauffeurs' licenses -----	890,567	\$2,101,073
Manufacturers' and dealers' licenses -----	41,275	64,253
Automobile fines to state road fund -----		\$222,488
Gross motor vehicle registration revenues -----	\$25,865,369	\$37,501,237

\*Does not include motorcycles nor dealers, and manufacturers' licenses.

## MOTOR TRACTORS, 1916-1918.

An investigation of the tractor situation in this country recently was completed by the Office of Farm Equipment Control, United States Department of Agriculture. In connection with this investigation a report was received from every tractor manufacturer in this country concerning the number of tractors manufactured and their distribution between January 1, 1916, and July 1, 1918.

## NUMBER OF TRACTORS MANUFACTURED

1916 -----	29,670
1917 -----	62,742
1918 -----	132,697

## NUMBER OF TRACTORS SOLD.

## To Users.

1916 .....	27,819
1917 .....	49,504

## To Exporters.

1917 .....	14,854
1918, first six months.....	15,610
Number of tractors on hand, in transit, or in hands of dealers at time of report (August, 1918).....	11,388

A production of 314,936 tractors in the United States in 1919 is estimated by manufacturers reporting to the Office of Farm Equipment Control, United States Department of Agriculture. The reports obtained in a special inquiry by the department show a production of 132,697 tractors in 1918. The manufacturers gave the number of tractors of different sizes manufactured last year and estimates of the number of each size that will be made this year. The figures for 1919, of course, are merely estimates and represent the aggregate of the estimates submitted by the tractor manufacturers in January and February of this year. A summary of these reports follows:

Number on hand December 31, 1917.....	15,525
Number manufactured during 1918.....	132,697
Number sold in the United States during 1918.....	96,470
Number sold for export during 1918.....	36,351
Number on hand December 31, 1918.....	15,401

Manufacturers' estimate of production for 1919.....	314,936
---	---------

## Number of Tractors of Different Horsepower Manufactured in 1918.

Makers' rating, belt horsepower	Number of tractors.
9, 10, and 12.....	1,117
16 and 18.....	20,629
20 and 22.....	72,238
24, 25, and 26.....	20,610
27, 28, 30, and 32.....	6,959
35 and 36.....	2,215
40 and 50.....	1,331
60, 65, 70, and 80.....	913
Not given .....	6,658

## Number of Tractors of Different Horsepower Which Manufacturers Estimate They Will Produce in 1919.

Makers' rating, belt horsepower	Number of tractors
9, 10, and 12.....	8,220
16 and 18.....	48,545
20 and 22.....	157,671
24 and 25.....	40,875
27, 28, 30, and 32.....	27,465
35 and 36.....	5,435
40, 45, and 50.....	1,780
60, 65, 70, 75, and 80.....	1,536
Not given .....	23,409

## PART XI.

NATIONAL FORESTS IN CALIFORNIA AND  
GAME.

**National Forests; Land Classification Projects; Leases of Government Land; Grazing Permits; Predatory Animals Destroyed; Timber Sold and Cut; Free Use of Timber; Forest Protection; Forest Fires; Fire Report for 1918; Forest Fires by Counties; Ten Largest Holdings; Ownership of Forests by Counties.**

The total area within the boundaries of the twenty National Forests wholly or partly in California on June 30, 1918, was 24,156,392 acres. It must be remembered, however, that a considerable portion of this area, 5,217,483 acres, to be exact, is privately owned, so that the area of National Forest land belonging to the Government is only 18,938,909 acres within the state. This is larger than the area of National Forests in any other state in the Union. The area in California by forests is shown by the following table:

## California.

Forest	Area National Forest land (acres)	Area privately owned land (acres)	Total area (acres)
Angeles -----	820,199	241,504	1,061,703
California -----	807,444	255,178	1,062,622
Cleveland -----	547,951	265,665	813,616
El Dorado -----	550,752	285,448	836,200
Inyo -----	1,248,868	61,942	1,310,810
Klamath -----	1,494,146	249,412	1,743,558
Lassen -----	937,037	384,306	1,321,343
Modoc -----	1,186,068	396,791	1,582,859
Mono -----	1,249,857	109,523	1,358,380
Plumas -----	1,144,835	288,025	1,432,860
Santa Barbara -----	2,008,152	280,636	2,288,788
Sequoia -----	1,879,815	141,794	2,021,609
Shasta -----	803,448	783,432	1,586,880
Sierra -----	1,488,655	173,905	1,662,560
Stanislaus -----	810,559	293,853	1,104,412
Tahoe -----	535,011	687,034	1,222,045
Trinity -----	1,426,112	320,035	1,746,147
Totals -----	18,938,909	5,217,483	24,156,392

The total area within the boundaries of the National Forests has fluctuated considerably in the past, due to slight additions, but more particularly to eliminations which have been made for various reasons, among the more important of which has been the consistent effort to throw open to the public such lands within the forests as have been classified as chiefly valuable for agriculture. Some few eliminations will undoubtedly be necessary in the future, but it is believed that the boundaries now established may be regarded as fairly permanent.

LAND CLASSIFICATION OF NATIONAL FORESTS, 1918.

Forest	National forest land	Allotted	Gross area	Timberland	Woodland	Brushland	Grassland	Barren land and water	Total timber stand (M ft. B.M.)
Angles	820,193	241,504	1,061,703	210,915	86,000	518,814	500	3,970	1,050,000

<sup>1</sup>Area to be permanently retained, 102,300 acres now pending elimination, not included.<sup>2</sup>Area to be permanently retained, 49,159 acres now pending elimination, not included.<sup>3</sup>Areas as shown by present proclamations. Areas actually administered differ considerably.

In accordance with the authority given by Congress to the Secretary of Agriculture, practically all lands within the National Forests of California have now been classified to determine whether or not they are chiefly valuable for agriculture and may be open to settlement and entry under the Forest Homestead Law.

Since the chief purposes in establishing the National Forests were watershed protection, and the conservation of a public timber supply, they were necessarily established in mountainous regions. For this reason, the relative proportion of agricultural land is comparatively small, although the total area made available for agricultural use is considerable. The classification records are open to the public, although it is generally the case that the agricultural land is taken up by homesteaders nearly as fast as it is classified.

The National Forest Administrative Act contains authority for allowing the use of National Forest lands and resources as fully as may be consistent with the accomplishment of the main purposes of watershed protection and conservation, and perpetuation of the timber supply. Under this authority, permits are granted for a great many uses of National Forest lands, such as apiaries, corrals, summer resorts, summer homes, municipal camp grounds, etc. A total of 4,142 of such permits were issued in 1917. These permits are, in effect, leases by the Forest Service for long periods at nominal sums, and they produced during 1917 a revenue of \$29,824. It has become a well established practice in California for the larger valley cities and municipalities of the state to lease from the Government beautiful tracts of National Forest land, upon which are established municipal camps, run by the cities or the municipalities for the benefit of the city dweller. California has, in fact, become a pioneer in this movement, and it is now possible for the person living in the valley towns to enjoy in these camps an extremely pleasant and inexpensive summer vacation.

Within the National Forests of the state hydroelectric plants, entirely or partially on government lands, now have a total installed capacity of 282,000 horsepower. The Government issues permits for these sites, which, it is estimated, will produce approximately 500,000 continuous horsepower under low water conditions.

In addition to the uses already mentioned, the National Forests of the state take care each year of a very considerable proportion of California's live stock. Cattle, horses, sheep and goats are allowed to graze upon the National Forests just so long as there is no serious interference with the purposes for which the forests were established. In view of war conditions, special measures were taken to accommodate as many extra stock on the National Forests as is possible. This was done as a war measure, and in accordance with the policy thus inaugurated in California, there was, within the National Forests of the state in 1917, a total of 49,010 sheep and goats, and 10,970 cattle, horses and swine in excess of the numbers carried during 1916.

The following table shows the number of grazing permits granted during the years 1911-1918, and the number and kind of stock grazed upon the National Forests of California:

Grazing Permits, 1911-1918.

Year	Number of permits	Cattle, number	Horses, number	Hogs, number	Number of permits	Sheep and lambs	Goats, number
1911 -----	2,422	151,582	9,824	3,867	298	372,646	13,464
1912 -----	2,521	169,361	10,403	3,480	367	432,974	15,235
1913 -----	2,664	169,951	11,765	2,360	377	438,556	13,249
1914 -----	2,696	175,356	12,487	1,608	348	424,917	10,956
1915 -----	2,694	176,616	10,383	1,644	317	392,271	6,644
1916 -----	2,765	183,746	9,922	1,224	326	409,835	7,217
1917 -----	2,913	196,002	8,933	857	378	456,325	9,427
1918 -----	3,142	214,312	8,410	1,076	464	570,722	11,233

To reduce loss of live stock on the National Forest ranges, the Forest Service has, in co-operation with local stock men, done considerable work in the eradication of poisonous plants, such as larkspur, from the ranges. In addition, and in co-operation with the United States Biological Survey, and the stock men, the Forest Service has taken an active part in the destruction of predatory animals. The following table shows the number of such animals killed by the Forest Rangers during 1911-1917:

Predatory Animals Destroyed, 1911-1917

Animal	1911	1912	1913	1914	1915	1916	1917
Bears -----	37	12	6	28	38	27	8
Mountain lions -----	5	3	3	-----	7	8	3
Wolves -----	7	2	-----	6	16	1	-----

Wildcats -----	193	160	132	91	101	342	33
Lynx -----	15	2	2	-----	10	3	3
Totals -----	1,000	657	480	544	509	1,932	167

The amount and value of timber sold and cut, and the sales within the National Forests of California in the fiscal years 1911-1917, are shown by the following table:

Timber Sold and Cut Under Commercial Sales in National Forests, 1911-1917.

Year	Timber sold, board feet	Value	Timber cut under sales, board feet	Value
1911 -----	112,438,000	\$295,536 22	37,899,000	\$80,243 65
1912 -----	109,214,000	232,697 81	43,914,000	97,239 33
1913 -----	1,064,804,000	2,324,936 03	52,419,000	108,708 74
1914 -----	79,706,000	153,171 54	48,598,000	105,467 99
1915 -----	32,251,000	61,647 59	35,841,000	78,400 33
1916 -----	151,964,000	306,540 25	55,251,000	119,921 05
1917 -----	122,133,000	286,599 66	66,643,000	143,352 01

In addition to the timber cut under commercial sales, a certain quantity is sold and cut at cost rates. Timber may be obtained at cost rates only by settlers living in or adjacent to the National Forests, who wish to use that timber in connection with direct development work on their ranches. In 1917 the number of such sales was 387; 1,952,000 board feet were sold for \$1,088.31. These sales are made in accordance with the timber sale policy of the Forest Service, which is to make provision first for local needs, both present and future. Sale of timber for commercial purposes, and which will enter into the general markets, is considered only when it is clear that an excess over the permanent supply required by local industries exists. The number of such sales, classified according to the size of the sale, is shown by the following table:

Number of Timber Sales, 1911-1918.

Amount	1911	1912	1913	1914	1915	1916	1917	1918
Under \$100 -----	506	575	555	682	861	997	902	459
From \$100 to \$500 -----	24	37	24	16	9	6	17	19
From \$500 to \$1,000 -----	2	9	5	11	8	3	8	11
From \$1,000 to \$5,000 -----	6	12	14	10	3	6	12	19
Over \$5,000 -----	5	2	9	4	2	5	11	12
Total number of sales..	543	635	607	723	883	1,017	950	913

In addition to sales at cost to settlers, residents and miners may obtain not to exceed \$20 worth of timber from the National Forests for their own use, free of charge each year. The material thus given away is restricted almost entirely to trees that should be removed for the benefit of the forest, and to dead timber which is a fire menace. Free use is also granted for co-operative and public enterprises. The amount and value of timber cut under free use during the years 1911-1917 is as follows:

Free Use of Timber, 1911-1917.

Year	Number of permits	Board feet	Value
1911 -----	3,085	9,197,000	\$17,359 02
1912 -----	2,756	8,490,000	14,797 95
1913 -----	3,118	8,918,000	18,011 15
1914 -----	2,915	8,416,000	15,250 47
1915 -----	3,106	6,778,000	16,996 78
1916 -----	2,797	7,711,000	18,788 44
1917 -----	2,302	6,602,000	10,431 88

Amounts Paid to the State from Forest Receipts for School and Road Moneys.

1910 -----	\$60,752 91
1911 -----	53,716 87
1912 -----	62,052 82
1913 -----	74,541 55
1914 -----	-----
1915 -----	67,611 87
1916 -----	79,350 88
1917 -----	109,008 01
Total -----	581,574 91

Over \$800,000 is spent annually in administering and protecting California's National Forests. During the fiscal year ending June 30, 1917, permanent improvements, including some two hundred and thirty-nine miles of trails, and the same number of miles of telephone lines, were built, at a cost of \$137,042. The trail and telephone systems within these forests now aggregate 3,742 miles of trail, and 4,607 miles of telephone lines.

Each National Forest is under the immediate control of a Forest Supervisor. For purposes of administration and protection, the forests are divided into Ranger districts, each of which is in charge of a District Ranger. Under the District Rangers are the protection forces—lookouts, patrolmen, and forest firemen. There are about 85 lookouts employed during the peak of the fire season, and these men, all of whom are stationed on the tops of the highest mountains throughout the forests, lead lonely lives. It is their duty to discover and report by telephone or heliograph to the nearest Ranger, patrolman, or fireman, every fire which starts within the forest. In addition to the lookouts, the Forest Service employs in California on an average of some 425 Rangers, patrolmen and firemen during the summer season. Something like 800 men—mountaineers, lumbermen, miners and ranchers, are also registered with the Forest Service as volunteers, to be called upon in emergencies. Private owners of timber within the National Forest are more and more rapidly taking advantage of the Government's fire protection system. During the fiscal year 1917, approximately \$50,000 was contributed by lumber companies, municipal organizations, railroads and owners of private timber lands for fire protection. This money was spent through co-operative agreement with the Forest Service on more than 4,000,000 acres of timber land and valuable watersheds.

The following table gives the number of fires, the area burned over, and the damage, both to National Forest land and to land privately owned within the National Forests for the years 1908-1918, inclusive:

	National Forest			Private			Total		
	Number	Area	Damage	Number	Area	Damage	Number	Area	Damage
1908 -----							528	156,214	\$132,791
1909 -----	288	85,545	\$83,302	188	21,721	\$14,401	476	107,266	97,703
1910 -----	319	258,713	332,586	224	108,631	189,843	553	367,344	522,429

1917 -----	1,118	326,948	183,477	531	125,133	40,537	1,649	462,081	224,014
1918 -----	1,114	214,143	96,156	432	118,922	1,497,602	1,546	333,065	1,593,758

In the Forest Nursery at Pilgrim Creek, Siskiyou County, some 330,000 seedlings and 240,000 transplants are raised every year. This stock, after it reaches the age of two years, is set out within the larger brush fields of Northern California. A careful examination of these brush fields indicates very clearly that they supported at one time an

excellent supply of timber, but as a result of repeated burnings, this timber has gradually disappeared and the brush has become so dense that it is, in places, well nigh impenetrable.

Fire Report for 1918.\*

In 1918 there were 1,546 forest, brush, grass and grain fires in California, which burned over 333,000 acres and destroyed timber, foods, feeds and improvements valued at \$1,593,758.

Data obtained from twelve insurance companies of the state shows for the period of 1915-1917, inclusive, a total of 260 fires in grain and hay, occurring in thirty counties. The average annual loss per county, based on these figures, is \$4,376, and the estimated annual loss for the state \$225,000.

Over 1,000 preventable fires, occurring in the national forests of California during 1917, destroyed over \$150,000 worth of property, and cost better than \$84,000 to extinguish. These fires resulted in the withdrawal from productive work of the equivalent of 400 men working eight hours each day for four months.

---

\*Includes fire damage in Northern Mendocino County.

The ten largest holdings of timber lands in 1914 comprise 2,448,094 acres, or approximately 42 per cent of all the privately-owned timber and cut-over land in the state. They are as follows:

Owners	Acres
Central Pacific Railroad Company (S. P.)-----	921,311
T. B. Walker and associates-----	673,665
McCloud River Lumber Company-----	232,063
Diamond Match Company-----	159,499
Hammond Lumber Company-----	94,760
Union Lumber Company-----	80,350
L. E. White Lumber Company-----	79,540
Weed Lumber Company-----	71,458
C. A. Smith-----	69,768
Sierra Nevada Wood and Lumber Company-----	65,680

The Southern Pacific holding is the greatest in the United States—106,000,000 feet. It is difficult to give an adequate idea of its immensity. It stretches practically 680 miles along that railroad, between Portland and Sacramento. The fastest train over this distance takes thirty-one hours. During all that time the traveler is passing through lands a large portion of which, for 30 miles on each side, belongs to the railroad, and in almost the entire strip this corporation is the dominating owner of both timber and land.

The holdings under 2,000 acres are too numerous to publish, but they are summarized as follows:

Size of holdings	Number of holdings	Amount in acres		Total
		Timber	Cut-over	
Below 1,000 acres-----	1,087	460,093	79,071	539,164
1,000 to 2,000 acres-----	196	195,687	59,321	255,008
2,000 acres and over-----	286	4,081,794	947,494	5,029,288
Totals -----		4,737,554	1,085,886	5,823,440

Of the standing timber in this state a very large percentage being in private ownership, the total acreage amounting to 4,555,941.

#### Ownership of Forests, 1914.

## CALIFORNIA GAME.\*

**Title Retained by State; Licenses; Fish and Game Districts; Deer; Elk and Antelope; Mountain Sheep; Bear; Fur-bearing Animals; Wild Ducks and Geese; Quail; Grouse; Sage Hen; Doves and Pigeons; Pheasants, Wild Turkeys and Hungarian Partridges; Number of Deer Killed; Lion Bounties Paid.**

The game animals are so valuable in California that the title to them has been retained by the state, and the fees charged for licenses, which expire annually on June 30, amount to a considerable sum.

The rates are: For hunting, residents, \$1; nonresidents, \$10, and aliens, \$25. For angling, citizens, \$1; nonresidents and aliens \$3.

In the fiscal year ending June 30, 1918, the receipts have been as follows: Hunting licenses, \$157,927; angling licenses, \$46,166.

**Fish and Game Districts.**

In California there are so many different conditions of climate and topography that it is almost impossible to create a blanket fish and game law. When deer, for example, are in proper condition to be killed in one section they are out of condition in another. The legislature in 1917 divided the state into four fish and game districts.

*Deer.* It is reported in many parts of the state that deer are on the increase, but this is doubtful. There are probably killed in the state each year by hunters, 12,000 deer. It has been estimated that every mountain lion will kill at least 52 deer a year; estimating the lions at 250, the number devoured by them would amount to 13,000. Coyotes and other animals would probably bring the total number destroyed to near 30,000. In average years the natural death rate is not great; most of them meet violent deaths, so the above number can be accepted as the number of deer dead from all causes in the state. The total number killed in 1911 was 6,489; 1914, 8,699; 1915, 8,343, and 1916, 8,117.

*Elk and Antelope.* Of the thousands of these animals that formerly ranged the state, there are now but a few scattered bands. In the San Joaquin Valley, near Buttonwillow, and in the Sequoia National Park range are all that are left of the thousands of "tule," a dwarf elk that formerly were found throughout the San Joaquin and Sacramento valleys. This species is peculiar to California, and now only number between 400 and 500 head.

Another variety is found in small numbers in Humboldt and Del Norte counties, in bands numbering from six to twelve, but the total number probably does not exceed 200.

*The Antelope.* The antelope is still found in the extreme eastern part of the state; some are found in Antelope Valley, in the north-eastern part of Los Angeles County, while in the western San Joaquin Valley the largest band of the state is found. In Modoc, Lassen, and Siskiyou counties there are several small bands. All told, there are probably about 600 antelope left in the state.

\*See Biennial Report of California Fish and Game Commission, 1916 and 1918.

*Mountain Sheep.* These still flourish in considerable numbers in the southeastern part of the state. Formerly this magnificent game animal ranged over the entire Sierra Nevada region and across to the lower Coast Range, as far north as San Luis Obispo County, but they are now restricted to the most inaccessible portions.

*Bear.* The grizzly bear is practically extinct. The common brown or black bear is fairly abundant in some parts. It is for the most part a harmless species, feeding on roots, berries, grubs and insects, and rarely kills sheep or hogs. The pelt of a well-colored bear in prime condition is worth from \$20 to \$40.

*Fur-bearing Animals.* Few people realize the importance of fur-bearing animals in this state, yet each year furs worth nearly \$200,000 are shipped to the various fur centers.

*Wild Ducks and Geese.* These are the most abundant game birds in the state, although neither of them are nearly as numerous as they were in former years. Ducks breed throughout the entire state, and the number killed in California in 1911 is estimated at approximately one million.

*Quail.* Quail are slowly decreasing throughout most of the state, on account of the great number of hunters. In parts of the state there is urgent need of a close season for a number of years if quail are to be kept from extermination. Mountain quail have become very scarce throughout the southern end of the state, and in the coast region below San Francisco. In other parts of the state they are about holding their own.

*Grouse.* Ruffed grouse are fairly abundant in the extreme north-western corner of the state. The blue grouse is becoming scarcer, and where the settlers have engaged in sheep raising, they are almost extinct.

*The Sage Hen.* This bird is found only in the eastern part of the state, in the true sagebrush country. The sage hen is practically never found below an elevation of 3,000 to 4,000 feet, nor out of the true sagebrush country. It is the largest California game bird.

*Doves and Pigeons.* The most difficult bird to arrange a proper season for is the common mourning dove, January being the only month in which they do not nest. On this account many sportsmen advocate the removal of the dove from the list of game birds. There is urgent need for the protection of the wild (band-tail) pigeon. This is the slowest breeding game bird in the United States. One egg is the complete set, and probably only one egg is laid the entire year.

*Pheasants and Wild Turkeys and Hungarian Partridges.* Of the introduced game birds, ring-neck pheasants have done well, especially in Humboldt County; they have also increased in parts of Santa Clara and San Joaquin valleys. Wild turkeys have been liberated in the lower Sierra Nevada region; other plants have been made in San Diego, San Bernardino, Monterey, San Benito, Alameda, Sonoma, and Humboldt counties. Hungarian partridges have been given a good trial, but, as yet, without success.

## HIGHER BOUNTY TO BE PAID ON MOUNTAIN LIONS.

The relatively small kill of lions during the past few years and the constant complaint by lion hunters that the bounty was insufficient to make the lion hunting worth while, has led the Fish and Game Commission to increase the bounty on female lions from \$20 to \$30. The new bounty will be in effect after July 1, 1917. All claimants for the bounty will be required to send in the entire skin of the animal with the evidence of sex attached. In cases where the sex can not positively be determined, only \$20 will be paid.

It is hoped that this increase of bounty will develop sufficient incentive to so control the number of mountain lions that their effect on deer will be negligible.

## APPENDIX A.

## CALIFORNIA STATE BOARD OF AGRICULTURE

## State Boards of Agriculture and Agricultural Experiment Stations in the United States.

There are 43 official bodies or organizations in the United States charged with the promotion of agriculture. Of these 20 are "State Boards of Agriculture"; 19 are governed by a "Commissioner of Agriculture;" 3, California, Georgia and Minnesota have a "State Agricultural Society," and Pennsylvania a "Secretary of Agriculture." Of the above, California is the only one with a dual title, that of the "State Agricultural Society" and "State Board of Agriculture," added in 1863. There are also 60 agricultural experiment stations, conducted, in most cases, under the authority of the state universities.

The first agricultural experiment stations were formed some forty-five years ago, one of the pioneers being that of the State University at Berkeley in 1873. They were subsequently reorganized under the Hatch Act of 1887, which largely extended the number of these most valuable institutions.

**Stallion Registration Boards.**

The first law regulating the registration of stallions was passed by the state of Wisconsin in 1906, since which time twenty-three other states have taken this important step to improve the breed of their horses. The California Stallion Registration Board dates from August 1, 1911.

**California State Agricultural Society.**

(Incorporated May 13, 1854. State Board of Agriculture appointed March 12, 1863.)

The California State Agricultural Society was one of the first to be organized, and ranks as fifth in the United States.

The first State Fair was held in the Music Hall at San Francisco from the fourth to about the twelfth of October, 1854, and the stock show was held on the Pioneer race course. A fair has been held annually ever since—in 1855 at Sacramento, 1856 at San Jose, 1857 at Stockton, 1858 at Marysville, and since then at Sacramento, except in 1915, when it was omitted on account of the Panama-Pacific International Exposition at San Francisco.

Many of the books and records of the Society were destroyed by a disastrous flood on the 9th of December, 1861, and 9th of January, 1862, caused by a break in the levee on the north side of Sacramento, and the Library, together with a complete set of the Annual Reports, was destroyed by fire on the 3d of September, 1916, when the main building was burned to the ground.

## CALIFORNIA STATE FAIRS, 1854-1919.

Year	Place	Date	Premiums	Races	Total	Presidents
1854	San Francisco	Oct. 4	\$4,660		\$1,660	F. W. Macondry, San Francisco.

## APPENDIX B.

## COUNTY COMMISSIONERS OF HORTICULTURE.

County	Horticultural Commissioners	Address
Alameda	Fred Soulberger, 418 Fourteenth st. D. P. Macdonald, Deputy Commissioner, 418 Fourteenth st.	Oakland. Oakland.
Amador	J. Marchant	Ione.
Butte	Earle Mills T. F. Stile, Deputy Commissioner	Oroville. Chico.
Calaveras	J. B. Luddy	San Andreas.
Colusa	L. R. Boedefeld	Colusa.
Contra Costa	Frank T. Swett	Martinez.
El Dorado	John A. Winkleman	Placerville.
Fresno	Fred P. Roullard	Fresno.
Glenn	C. Hugh Wren	Willows.
Humboldt	John F. Benton	Eureka.
Imperial	F. W. Waite	El Centro.
Inyo	John W. Dixon	Big Pine.
Kern	Norman G. Buhn	Bakersfield.
Kings	Lawrence O. Haupt, Court House	Hanford.
Lake	Fred G. Stokes	Kelseyville.
Lassen	F. H. Taylor	Susanville.
Los Angeles	H. J. Ryan, Hall of Records	Los Angeles.
Madera	Geo. Marchbank	Madera.
Marin	Thos. P. Redmayne	San Rafael.
Mendocino	E. W. Dutton	Ukiah.
Merced	Arthur E. Beers	Merced.
Modoc	Thos. Briles	Davis Creek.
Monterey	J. B. Hickman J. O. McKinney, Deputy Commissioner, P. O. box 242.	Aromas. Salinas.
Napa	W. D. Butler	Napa.
Nevada	D. F. Norton	Grass Valley.
Orange	Earl L. Morris	Santa Ana.
Placer	C. K. Turner	Auburn.
Riverside	D. D. Sharp	Riverside.
Sacramento	Fred C. Brosius, Court House	Sacramento.
San Benito	Leonard H. Day	Hollister.
San Bernardino	John P. Coy	San Bernardino.
San Diego	G. R. Gorton, Court House	San Diego.
San Francisco	Dudley Moulton, Board of Supervisors, Clerk's Office	San Francisco.
San Joaquin	H. H. Ladd, Court House	Stockton.
San Luis Obispo	H. E. Alley	San Luis Obispo.
San Mateo	H. E. Woodworth	Redwood City.
Santa Barbara	Eugene S. Kellogg	Santa Barbara.
Santa Clara	L. R. Cody	San Jose.
Santa Cruz	Donald D. Penny	Watsonville.
Shasta	B. F. Stroup	Anderson.
Siskiyou	W. L. Kleaver	Yreka.
Solano	G. M. Gat s.	Vacaville.
Sonoma	O. E. Bremner	Santa Rosa.
Stanislaus	A. L. Rutherford	Modesto.
Sutter	H. P. Stabler	Yuba City.
Tehama	G. H. Flourney	Red Bluff.
Tulare	Chas. F. Collins C. H. Doyle, Deputy Commissioner	Visalia. Porterville.
Ventura	A. A. Brock	Santa Paula.
Yolo	Wm. Gould Harold Van Tassel, Deputy Commissioner, P. O. Box 199.	Woodland. Sacramento.
Yuba	G. W. Harney	Marysville.

## FARM ADVISERS OF CALIFORNIA.

County	Name	Address
Alameda	Prof. M. A. W. Lee, Chamber of Commerce	Hayward.
Butte	H. E. Drobish (acting), Chamber of Commerce	Oroville.
Contra Costa	Carl Nichols	Martinez.
El Dorado	Prof. Burle J. Jones	Placerville.
Fresno	Prof. LeRoy B. Smith, 517 Holland Bldg.	Fresno.
	R. N. Davis, Assistant.	
Glenn	Prof. W. H. Heileman, Federal Bldg.	Willows.
Humboldt	B. C. Bougher, 622 3d st.	Eureka.
Imperial	Dr. W. O. Johnson, Court House	El Centro.
	Roy P. Crocker, Assistant.	
Kern	M. A. Rice, Court House.	Bakersfield.
	E. L. Garthwaite, Assistant.	
Kings	W. Sullivan	Hanford.
Los Angeles	R. W. Hodgson (acting), 557 Court House.	Los Angeles.
	F. H. Scribner, Assistant.	
	G. E. Gordon, Assistant.	
Madera	E. F. Smyth, Chamber of Commerce	Madera.
Mendocino	Prof. Chas. S. Myszka	Ukiah.
Merced	J. F. Grass, Jr., F. B. Office	Merced.
	W. A. Graham, Assistant.	
Monterey	T. C. Mayhew, City Hall.	Salinas.
Napa	Prof. H. J. Baade, Court House.	Napa.
Nevada	H. I. Graser	Grass Valley.
Orange	H. E. Wahlberg, 506 N. Main st.	Santa Ana.
Placer	E. O. Amundsen, Court House.	East Auburn.
Riverside	Prof. R. N. Wilson, Telephone Bldg.	Riverside.
	R. E. Nebelung, Assistant.	
San Bernardino	B. W. Shaper, 438 Court st.	San Bernardino.
Sacramento	O. W. Jarvis, Court House.	Sacramento.
	Verne W. Hoffman, Assistant.	
San Diego	Prof. H. A. Weinland, Chamber of Commerce.	San Diego.
San Joaquin	J. W. Adriaance, Chamber of Commerce.	Stockton.
Santa Cruz	H. L. Washburn, 4 Cooper st.	Santa Cruz.
	W. J. Tocher, Assistant.	
Shasta	Prof. Parker Talbot, Court House.	Redding.
Solano	J. W. Mills, Court House.	Fairfield.
Sonoma	Prof. G. E. Merrill, Court House.	Santa Rosa.
	Donald E. Martin, Assistant.	
Stanislaus	A. A. Jungermann, P. O. box 877.	Modesto.
	R. D. McCallum, Assistant.	
Sutter	C. E. Sullivan, Mission Hall.	Yuba City.
Tehama	E. W. Curtis, Chamber of Commerce.	Red Bluff.
Tulare	Prof. C. M. Conner, Auditorium.	Visalia.
Ventura	C. C. Staunton, Court House.	Ventura.
Yolo	W. D. Norton (acting), Court House.	Woodland.
Yuba	Wm. Harrison, Chamber of Commerce.	Marysville.

## Itinerant Assistants.

J. E. Tippet, room 3, Agricultural Hall, Berkeley.  
 Melvine W. Buster, room 3, Agriculture Hall, Berkeley.  
 A. N. Nathan, room 3, Agriculture Hall, Berkeley.

## APPENDIX C.

## NATIONAL AND CALIFORNIA AGRICULTURAL ASSOCIATIONS.\*

## Horses.

American Hackney Horse Society-----	Hempstead, New York
American Shire Horse Society-----	Bushnell, Illinois
American Saddle Horse Breeders' Association-----	Lexington, Kentucky
Arabian Horse Club of America-----	1729 G St., Washington, D. C.
Coach Horse Association of America-----	Lafayette, Indiana
French Coach Horse Society of America, Maple Ave. and Harrison St., Oak Park, Ill.	
German, Hanoverian and Oldenburg-----	
Standard Bred: American Trotting Registered Association-----	
-----	137 South Ashland Ave., Chicago, Ill.
Thoroughbreds: The Jockey Club-----	New York, New York
Percheron Society of America-----	Stockyards, Chicago, Illinois
Pacific Coast Saddle Horse Breeders' Association, Dr. W. J. Smyth, Secretary-----	
-----	Union Savings Bank, Oakland, California
Pacific Coast Trotting Horse Breeders' Association-----	Oakland, California

## STATES HAVING STALLION REGISTRATION LAWS.

State	Name and location	Date of organization
California -----	Stallion Registration Board, Sacramento-----	Aug. 1, 1911
Colorado -----	State Board of Stock Inspection Commissioners, Denver-----	Aug. 5, 1911
Idaho -----	Stallion Registration Board, Moscow-----	Mar. 15, 1909
Illinois -----	Stallion Registration Board, Springfield-----	Jan. 1, 1910
Iowa -----	Stallion Registration Board, Des Moines-----	Mar. 30, 1907
Kansas -----	State Livestock Registry Board, Manhattan-----	April 3, 1910
Michigan -----	Agricultural College, East Lansing-----	Aug. 1, 1911
Minnesota -----	Stallion Registration Board, St. Paul-----	April 25, 1907
Missouri -----	Missouri Stallion Registration Board, Columbia-----	Jan. 1, 1918
Montana -----	Bureau of Agriculture, Labor Industry and Publicity, Helena-----	Mar. 8, 1909
Nebraska -----	Stallion Registration Board, Lincoln-----	July 7, 1911
New Jersey -----	Stallion Registration Board, New Brunswick-----	Sept. 1, 1908
New York -----	New York Stallion Registration Board, Albany-----	Aug. 1, 1916
North Dakota -----	Stallion Registration Board, Fargo-----	Jan. 1, 1910
Oklahoma -----	Oklahoma State Live Stock Registration Board, Stillwater-----	Feb. 25, 1915
Oregon -----	Stallion Registration Board, Corvallis-----	May 20, 1911
Pennsylvania -----	Stallion Registration Board, Harrisburg-----	Jan. 1, 1908
South Dakota -----	Stallion Registration Board, Brookings-----	Mar. 9, 1909
Utah -----	Stallion Registration Board, Logan-----	May 13, 1907
Washington -----	Stallion and Jack Registration Office, State College, Pullman-----	June 8, 1910
Wisconsin -----	Stallion Registration Board, Madison-----	Jan. 1, 1906

## Cattle.

American National Livestock Association-----	Denver, Colorado
American Hereford Cattle Breeders' Association-----	625 Finance Building, Kansas City, Missouri
American Polled Hereford Cattle Breeders' Association-----	Des Moines, Iowa
American Jersey Cattle Club, R. M. Gow, Secretary-----	
-----	324 West Twenty-third Street, New York, N. Y.
American Polled Jersey Cattle Club-----	R. F. D. No. 4, Springfield, Ohio
American Guernsey Cattle Club, Wm. H. Caldwell-----	Peterboro, New Hampshire
American Devon Cattle Club, L. P. Sisson, Secretary-----	Charlottesville, Virginia
American Polled Durham Breeders' Association, J. H. Martz, Secretary-----	
-----	Greenville, Ohio
American Shorthorn Breeders' Association, F. W. Harding, Secretary-----	
-----	No. 13 Dexter Park Avenue, Union Stockyards, Chicago, Illinois
Holstein-Friesian Association of America, L. F. Houghton, Secretary-----	
-----	Brattleboro, Vermont
Red Polled Cattle Club of America, H. A. Martin, Secretary-----	Gotham, Wisconsin
American Aberdeen-Angus Breeders' Association-----	
-----	817 Exchange Avenue, Chicago, Illinois

\*This is only a partial list as there are many county and local organizations too numerous to include in this summary.

American Galloway Breeders' Association.....	Carrollton, Missouri
American Kerry and Dexter Cattle Club, C. S. Plum, Secretary.....	
.....	Ohio State University, Columbia, Ohio
Ayrshire Breeders' Association, C. M. Winslow, Secretary.....	Brandon, Vermont
Dutch Belted Cattle Association of America, G. G. Gibbs, Secretary.....	
.....	Marksboro, New Jersey
Brown Swiss Cattle Breeders' Association, Ira Inman, Secretary.....	Beloit, Wisconsin
California Cattlemen's Association.....	320 Sharon Building, San Francisco, California
California Holstein-Friesian Association.....	Sacramento, California
California Jersey Breeders' Association.....	Lockeford, California

**Sheep.**

American Southdown Breeders' Association.....	510 Monroe St., Springfield, Illinois
American Shropshire Register Association.....	Lafayette, Indiana
American Oxford Down Record Association.....	Hamilton, Ohio
The Continental Dorset Club.....	Mechanicsburg, Ohio

## APPENDIX D.

---

### Acts Relating to the Management and Control of the State Agricultural Society.\*

- Chapter 60—To provide for the management and control of the State Agricultural Society by the state. Approved April 15, 1880.
- Chapter 307—An act to amend the above act. Approved June 11, 1913.
- Chapter 570—An act to amend the above act. Approved May 29, 1915.

### STATISTICS.

- Chapter 584—An act to provide for the collection, compilation and publication of agricultural and other industrial statistics for the state of California, and making an appropriation therefor. Approved April 25, 1911.

---

\*The California State Agricultural Society was one of the first to be organized, and ranks as fifth in the United States.  
Incorporated May 13, 1854.  
State Board of Agriculture appointed March 12, 1863.

## CHAPTER 60.

*An act to provide for the management and control of the state agricultural society by the state.*

[Approved April 15, 1880.]

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. The state agricultural society is hereby declared to be a state institution.

SEC. 2. Within ten days after the passage of this act, the governor shall appoint twelve resident citizens of the state, who shall, when organized constitute a state board of agriculture, who shall, except as hereinafter provided, hold office for the term of four years, and until their successors are appointed and qualified. Vacancies occurring from any cause in the board shall be filled by appointment of the governor for the unexpired term of the office vacated.

SEC. 3. Within ten days after their appointment, the persons so appointed shall qualify, as required by the constitution, and shall meet at the office of the state agricultural society and organize by the election of one of their number as president of the board and said society, who shall hold said office of president for the term of one year, and until his successor is elected and qualified. The board shall also elect a secretary and treasurer, not of their number, who shall each hold office at the discretion of the board.

SEC. 4. At the same meeting, the members of the board shall, by lot or otherwise, classify themselves into four classes of three members each. The terms of office of the first class shall expire at the end of the first fiscal year; of the second class, of the second year; of the third class, of the third year; of the fourth class, at the end of the full term of four years. The fiscal year shall be from the first of February to the first of February.

SEC. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules of the society, to adapt the same to the provisions of this act, and to the management of the society, its meetings and exhibitions. They shall provide for an annual fair or exhibition by the society of all the industries and industrial products of the state, at the city of Sacramento; *provided*, that in no event shall the state be liable for any premium awarded or debt created by said board of agriculture.

SEC. 6. The board shall have power to appoint all necessary marshals and police to keep order and preserve peace at the annual fairs of the society; and the officers so appointed shall be vested with the same authority for the preservation of order and peace, on the grounds and in the buildings of the society, that executive peace officers are vested with by law.

SEC. 7. Said board shall use all suitable means to collect and disseminate all kinds of information calculated to educate and benefit the industrial classes, develop the resources, and advance the material interests of the state, and shall, on or before the first day of February of each year, report to the governor a full and detailed account of their transactions, statistics, and information gained, and also a full financial statement of all funds received and disbursed. They shall also make such suggestions and recommendations as experience and good policy may dictate for the improvement and advancement of the agricultural and kindred industries.

SEC. 8. The superintendent of state printing shall, each year, print and bind in cloth four thousand volumes of said transactions, and deliver the same to said board of agriculture for distribution and exchange. He shall also do such job printing as said board may require to carry out the provisions of this act.

SEC. 9. The directors or boards of managers of each county and district agricultural society or association, and of county, district, or state horticultural and stock breeding association or society, organized, and acting under the laws of this state, shall report annually, on or before the first day of April, to the state board of agriculture, the name and post-office address of each officer of such society or association; and, on or before the first day of December, shall report to said board of agriculture the transactions of said society, including the premiums offered, the list of stock and articles exhibited, and the premiums paid; the amount of receipts and expenditures for the year, the new industries inaugurated, and any and all facts and statistics showing the development and extent of the industries, products, and resources of the county or district embraced within the management of such society or association; *provided*, that the provisions of this act shall not apply to any board of commissioners or other body organized under the laws of this state, the object of which is to promote vinicultural industries, unless such board or body shall voluntarily request the privilege of making such reports as are called for by this act, in which case such board or body shall enjoy equal privileges as are accorded to other institutions devoted to agriculture.

SEC. 10. To facilitate such reports, the state board of agriculture shall have prepared, and shall furnish such societies with necessary schedules and blanks for such reports; said state board shall include such reports from societies and associations, or so much thereof as they may deem advisable, in their report to the governor.

SEC. 11. When said state board of agriculture shall have been organized and classified as provided herein, the secretary of the board shall report such organization and classification to the governor. He shall also report any vacancy that may occur in said board at any time.

SEC. 12. All laws and parts of laws in conflict with this act are hereby repealed.

SEC. 13. This act shall take effect and be in force from and after its passage.

## CHAPTER 307.

*An act to amend an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880.*

[Approved June 11, 1913.]

*The people of the State of California do enact as follows:*

SECTION 1. Section five of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, is hereby amended to read as follows:

Sec. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules of the society; to adapt the same to the provisions of this act, and to the management of the society, its meetings, and exhibitions. They shall provide for an annual fair or exhibition by the society of all the industries and industrial products of the state, at the city of Sacramento; *provided*, that in no event shall the state be liable for any premium awarded or debt created by said board of agriculture; *provided, further*, that the collections and receipts from other sources than state appropriations shall be reported monthly by the secretary to the controller of state and shall be paid into the state treasury. Such receipts shall be credited to the state agricultural society contingent fund, which is hereby created, and shall be for the use of the society.

---

CHAPTER 570.

*An act to amend sections one and five of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, as amended and approved June 11, 1913.*

[Approved May 29, 1915.]

*The people of the State of California do enact as follows:*

SECTION 1. Section one of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, as amended June 11, 1913, is hereby amended to read as follows:

Section 1. The state agricultural society is hereby declared to be a state institution; *provided*, that all rights and privileges which have heretofore accrued to members of said society under its rules, either through payments made or by services rendered, are hereby recognized and continued.

SEC. 2. Section five of said act is hereby amended to read as follows:

Sec. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property and be intrusted with the direction of its entire business and financial affairs. It shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules for the society, to adapt the same to the provisions of this act and to the management of the society, its meetings and exhibitions. It shall provide for an annual fair or exposition by said society of the industries and industrial products of this state and commercial products exported and imported through the ports of this state at the city of Sacramento each year; *provided*, that in any year during which an international exposition conducted in whole or in part under the auspices of the State of California and endorsed by the United States government, is held within the State of California and the state board of agriculture deems it inexpedient to hold a state fair, the funds of the state agricultural society for that year only may be expended in cooperation with the management of said exposition to provide for a proper exploitation of the industries of California at such exposition; *provided, further*, that in no event shall the state be liable for any premium awarded or debt created by the said state board of agriculture; *provided, further*, that the collections and receipts from sources other than state appropriations, shall be reported monthly by the secretary to the controller of state, and shall be paid to the state treasury. Such receipts shall be credited to the state agricultural society contingent fund, which is hereby created, and shall be solely for the use of the society.

#### CHAPTER 584.

*An act to provide for the collection, compilation and publication of agricultural and other industrial statistics for the State of California, and making an appropriation therefor.*

[Approved April 25, 1911.]

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. The board of directors of the state agricultural society are authorized, and it is hereby made their duty, to collect, compile and publish annually, on or before the 31st day of January in each year, statistics showing the yield of agricultural and other farm and industrial products of the State of California for each preceding year, and shall, as nearly as may be practicable, ascertain and publish each year the number of acres of land within the state that are under irrigation, and the number, location and extent of any new irrigation enterprises, exclusive of individual pumping plants, that may have been started within the state during the preceding year.

SEC. 2. For the purpose of carrying out the provisions of this act, the sum of five thousand (\$5,000.00) dollars per annum is hereby appropriated out of any money in the state treasury not otherwise appropriated, and the controller is hereby authorized to draw his warrant from time to time up to the amount of said appropriation in favor of the board of directors of the state agricultural society, and the state treasurer is hereby authorized and directed to pay the same.

SUPPLEMENT

---

SUMMARY OF THE AGRICULTURAL  
RESOURCES

OF THE

STATE OF CALIFORNIA

BY COUNTIES

The brief description of each county which follows, has been greatly condensed in order to keep it within the space available.

County statistics were first obtained under an act passed in 1905, under which county statisticians were appointed, but the result was a failure, as many counties omitted to supply the figures required, and therefore no complete statistics for the state as a whole could be published. In 1910 eleven counties failed to make any report, and in other years the number was even greater.

In 1911 county statisticians were abolished, and the present system established by Chapter 584, which appropriates \$5,000 per annum for that purpose, a sum, however, which is quite inadequate to give entirely satisfactory results by making the report as complete as it is could be made with a comparatively moderate increase in the expenditure.

The size of farms, and the figures relating to crops, fruit trees, by counties are those given in the last census. Later statistics brought up to date are also given.

The source of the statistics contained in this report is the most trustworthy that can be obtained, and when estimated, the figures are strictly conservative.

---

NOTE.—Statistics regarding farms, farm animals and farm crops by counties, are only collected by the U. S. Census Bureau every ten years, as it is a very large and costly undertaking. The pay of the enumerators alone at the last census in 1910 in this state amounted to \$151,750.

## SUMMARY OF THE WEATHER IN 1918.

(From the report of the U. S. Weather Bureau, San Francisco.)

The year 1918 in California was about normal in temperature, but the precipitation was somewhat below normal. January, June and October were abnormally warm, while the remaining months were colder than usual. The average precipitation was nine per cent below normal. But 16 per cent of the total annual precipitation fell during the dry half-year, April to September, inclusive, while 54 per cent of the total precipitation for the year occurred during two months, February and March. The features of the weather for the year were the light precipitation in January, which was the driest January in 20 years; the deficient snowfall in the mountains during both spring and autumn; the extreme heat of June, which was the warmest June in 22 years; and the abnormal precipitation in September, which was the wettest September in 14 years.

Agriculturally, the weather of the year was partly favorable, partly unfavorable. Fruit crops gave a larger, while grain and grass crops gave a smaller yield in 1918 than in 1917. The greatly lessened production of hay, both tame and wild, materially reduced the total tonnage of agricultural products. Because of the occurrence of two successive dry years, and light snowfall in the mountains, irrigation water was deficient during the growing season. Moreover, the untimely September rains ruined a considerable portion of the curing fruit of the central portion of the State. In spite of these unfavorable features, however, agriculture prospered, and the total value of harvested crops was the largest in the history of California.

TABLE XLVI.

## Temperature, Rainfall, and Snowfall in Each County in 1918.

(Compiled from the Report of the United States Weather Bureau, San Francisco.)

Counties	County seat or observation station	Elevation, feet.....	Temperature		Rainfall, inches.....	Snowfall, inches (unmelted)
			Highest	Lowest		
Alameda	Oakland	36	87	34	23.39	0

Solano	Vacaville*	175				
Sonoma	Santa Rosa	181	100	20	24.21	0
Stanislaus	Newman*	91	106	21	16.02	0
Sutter	Yuba City	57				
Tehama	Red Bluff	307	112	26	23.57	0
Trinity	Weaverville	2,162	107	9	25.63	0
Tulare	Lemon Cove*	600	108	27	13.60	0
Tuolumne	Lake Eleanor*	4,700				
Ventura	Ojai Valley*	900				
Yolo	Davis*	51	112	24	16.69	0
Yuba	Marysville	67	110	25	19.30	0

\*Observation stations.

Where there is no observation station at the county seat some other station is given. There is no observation station in San Mateo, Solano or Sutter counties. In the last named the figures for Yuba may be accepted as correct, as Marysville is on the opposite side of the river.

Since last year observation stations in the following eight counties have been discontinued: Alpine, Amador, Colusa, Lake, Madera, Mono, Tuolumne, and Ventura.

## ALAMEDA COUNTY.

Date of creation, March 25, 1853.

	1890	1900	1910	1917 (estimated)
Land area, 732 square miles.	Population... 93,864	130,197	246,131	330,758
County seat, Oakland.	Population... 48,682	66,960	150,174	206,405
Population per square mile, 336.2.				
	Highest	Lowest	Inches	Inches
Elevation, 36 feet.	1917: Temperature... 95	30	Rainfall... 11.16	Snow... 0
	1918: Temperature... 87	34	Rainfall... 23.39	Snow... 0

Alameda County fronts on the bay of San Francisco for a distance of 38 miles, with an average width of 25 miles, extending to and beyond the summit of the Contra Costa hills, comprising numerous beautiful valleys, besides the broad Alameda Valley, which last is bounded by the waters of the bay on the one side and the Contra Costa hills on the other, and is one of the richest and most fertile valleys in the state. The principal stream is Alameda Creek. There are other creeks crossing the county and emptying into the bay, two of which furnish water for the city of Oakland. The country around Hayward is one of the great fruit-raising regions, many millions of pounds being shipped annually.

The soils immediately along the bay in Alameda County and the marshes formed by the overflow are heavy, but very fertile when reclaimed. Then comes a broad belt of rich, clay loams that is crossed by deposits of alluvium made by shifting channels of streams running down from the Coast Range. In the Niles region are lighter loams. About Livermore are uplands, bench, and valley lands. The Pleasanton section consists of agricultural and grazing lands. The soil is a very rich sediment, producing hay, grain, potatoes, alfalfa, of which there is 5,000 acres, and beets in abundance. At Alvarado the surrounding country is a fine farming and fruit region, and gardening and dairying are largely carried on.

Alameda County was among the first to begin the planting of orchards and vineyards. The county is divisible into three sections—the cherry district, containing about 757 acres, the apricot district of about 5,000 acres, and the vineyard district.

Alameda is *par excellence* a vegetable-producing county, since the profit in peas, potatoes, rhubarb, asparagus, and several other vegetables is large. About 4,000 acres in this county are planted in tomatoes, which prove to be a most profitable crop. There is also 4,183 acres in sugar beets.

The growing of peas for canning has assumed importance. The output of the San Leandro cannery, located in this county, has reached as high as 1,200 cases per day, and 3½ tons of peas have been grown upon a single acre.

The average annual output of salt recovered from San Francisco Bay, in Alameda County, is very large, including both coarse and fine salt.

## ALAMEDA COUNTY SUMMARY.

(Census 1910.)

Number of Farms Classified by Size.	
Under acres.....	148
3 to 9 acres.....	589
10 to 19 acres.....	405

	1917: Temperature...	82	16	Rainfall...27.82
	1918: Station discontinued.			Snow...538.0
				Snow...259.0

Alpine County is one of the counties on the eastern border, and out of the way, as far as her means of communication with the other counties of the state is concerned, there being no public road maintained to the border, thereby rendering it necessary to turn to the state of Nevada for a route to reach the capital at Sacramento, or any other part of the state. All transportation is by wagon or mule back, and this condition militates against the development of the county's many natural resources, as intending investors or purchasers are not afforded a convenient route of reaching the county.

The resources of Alpine County are great, especially in mineral, timber, and water power, the latter offering a field of immediate development to enterprising capital.

Amador adjoins El Dorado County on the south, Alpine on the west, Calaveras on the north and Sacramento and San Joaquin counties on the east. It is inland and occupies the east central portion of the state. It has no navigable rivers. The Cosumnes forms a part of its northern boundary and the Mokelumne forms its entire southern boundary. Both of the rivers are tributaries of the Sacramento. Varying, in main, in altitude from 30 feet to 1,500 feet, and having a most productive soil, and the great portion of the county being a rolling, or foothill region, it is adapted to the cultivation of any kind of a farm, of horticultural, or of viticultural product.

Grain and hay are cultivated to a considerable extent. In many parts of the western portion of the county a great variety of vegetables is grown throughout the year. Yielding, as the county does, an abundance of the best natural grasses, it offers inducements to stockmen.

Distinctively, the county is a region of mineral deposits. The one resource, however, that is paramount, is gold, which makes up over 96 per cent of the entire total of minerals.

That the gold quartz vein or ledge does not deteriorate in either quality or quantity with the increasing depth to which the vein has been explored, has long since passed the theoretical state. So that this fact affords greater stability to the mining industry and thus quartz mining on the "mother lode" makes a vastly stronger appeal to capital lying idle, awaiting greater and safer inducements to enter this fascinating and legitimate industrial field.\*

Mountain lakes and valleys and river canyons furnish abundant opportunity for those needing recreation, or for those that enjoy hunting and fishing. Mineral springs, having medicinal properties that are prescribed in certain cases, are found in different parts of the county.

\*George A. Gordon, Deputy County Assessor.

**BUTTE COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 1,722 square miles.	Population... 17,939	17,117	27,301	34,734
County seat, Oroville.	Population... -----	-----	3,859	3,300
Population per square mile, 15.9.				

	Highest	Lowest	Inches	Inches
Elevation, 250 feet.	1917: Temperature... 109	21	Rainfall... 17.31	Snow... 0
	1918: Temperature... 110	24	Rainfall... 22.84	Snow... 0

Butte County is situated in the northern and eastern Sacramento Valley, and embodies within its confines both mountain, foothill, and valley land. Its climate is most diverse, and in its confines are grown all the products to be found in the temperate and semi-tropical zones. In the higher altitudes, apples thrive, while in the lowest stretches of the rolling foothills, oranges and olives reach perfection. On the broad plains great rice fields are now being planted, and the industry promises to rival that of alfalfa and dairy farming and the more extensive grain farming that has hitherto prevailed. Deciduous fruits of every kind are grown. Large olive pickling works are located in Oroville. The county ranks first in the state in the production of olives. There are also a number of orange packing houses in the county.

The county is exceptionally well watered. Through it runs the Feather River, with a large number of tributary streams. On one boundary is the great Sacramento River. As a result of the abundance of water, increased attention is being given to irrigation. The Butte County canal covers thousands of acres around Gridley, where the utmost prosperity prevails. The U. S. Department of Agriculture maintains an experiment station of 210 acres at Chico, where large numbers of many varieties of fruit trees are tested, and the best selections distributed. The Bidwell National Park contains 2,300 acres. A small acreage of tobacco was grown in 1917, but was destroyed by fire. None was grown in 1918, but about 40 acres has been planted recently. In 1918 about 1,400 acres of cotton were planted near Durham, and 800 to 1,000 bales were expected, but rains rotted the cotton and only 75 bales were ginned at the Durham gin. The first land settlement was established in this county in 1918.\*

Butte County is also the third largest gold-producing county of the state. The chief gold-dredging field lies around Oroville.

The county was the first to grow rice on a commercial scale, at Biggs and Gridley, and it is now the largest rice-growing county in the state.

\*For further details, see page 12.

Ranger Sta., 3,400 ft.	1918: Temperature...	96	17	Rainfall...45.87	Snow...36.0

Calaveras is located on the long, gradual western slope of the Sierra Nevada, a little above the center of the state north and south. The Sierra on the east is an abrupt wall plunging down 10,000 feet in ten miles, while the westward side is a long, grand sweep, full seventy miles from foothill to summit. On the east is the great desert basin of Nevada and Utah; on the west the exuberance of California valleys, rich in meadows, grainfields and orchards. Above the level plain rise the foothills in waves or ripples, hardly distinguishable from the plains at first, but more rolling as you go upward, with long swells of hill and little dales and scattering growth of oak and pine and patches of chaparral.

The elevation rises gradually from about 150 feet to table-lands lying 4,000 feet and peaks of 7,500 feet.

In several parts of the county Angora goats are kept. They are profitable, are hardy, and increase rapidly. The young make excellent "mutton."

Alfalfa is a staple crop wherever it can be irrigated.

**COLUSA COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 1,140 square miles.	Population---	14,640	7,364	7,732
County seat, Colusa (town).	Population---	1,336	1,441	1,582
Population per square mile, 6.8.				2,060
East Park (Station):	Highest	Lowest	Inches	Inches
Elevation, — feet.	1916: Temperature---	109	10	Rainfall---18.69
Colusa, 60 feet.	1917: Temperature---	109	24	Rainfall---7.53
	1918: Station discontinued.			Snow---0

Colusa County is situated in the heart of the great Sacramento Valley. The fertile soil, the temperate climate, the extreme dryness of the atmosphere during two-thirds of the year, and, lastly, a sufficient rainfall, make possible the production of great wealth from the fertile acres of this county.

The western portion of the county is principally mountainous, with some very productive valleys intervening. Cattle and live stock interests prevail. Several mineral springs are located in this portion of the county, and thousands of bottles of mineral water are shipped annually. At Sites two quarries take out stone, known as the famous Colusa sandstone, from which many prominent buildings in San Francisco are built.

Colusa County was one of the first to grow rice, and now has a considerable acreage, which is expected to amount to 50,000 acres in 1919.\*

Almonds now form an important crop in this county, and in the Arbuckle district about 7,000 acres are planted, which average about 60 trees to the acre, but many are still non-bearing. The crop of 1916 amounted to 100 tons, of first-grade quality, and the prices were about 25 per cent higher than the previous year.

**COLUSA COUNTY SUMMARY.**

Elevation, 46 feet.	1917: Temperature---107	30	Rainfall--- 5.46	Snow--- 0
	1918: Temperature---104	27	Rainfall---16.46	Snow--- 0

Contra Costa is one of the central counties, its shore line being within fourteen miles of San Francisco. It possesses unusually good traveling facilities both by rail and by steamer. The county has seventy miles of water front, nearly all of which is upon deep water, navigable by all vessels engaged in commerce. Over three-fourths of its area is cultivated, the balance being used for grazing. The only mountain of any size is Mount Diablo, which is 3,849 feet in height, and almost in the geographical center of the county.

The farming lands in the eastern section are between the foothills and the San Joaquin River. The soil is of a rich, alluvial nature, and produces wheat, barley, alfalfa, fruit, and vines. To the northward and between the uplands and the San Joaquin River is a body of the tule lands, a large portion of which has been reclaimed, and is some of the most productive land in the state, being a rich deposit of sediment and decomposed vegetation. Alfalfa, asparagus, potatoes, beans, etc., are produced on the largest scale on such lands.

Grain raising is very important in this county. A large acreage is planted to barley and hay. The raising of sugar beets is a growing industry. Vegetables of all kinds are raised profitably.

Stock raising is a leading industry, and the reclaimed lowlands for summer grazing and the rolling hills for winter, close together, create conditions whereby a failure is impossible. The stock farms have produced some of the most famous trotting and pacing horses. Port Costa, the shipping point for the bulk of the grain raised in California, has extensive warehouses. Near Vallejo Junction is the largest smelting works in the state; at Vallona are extensive lumber yards, where ships from Oregon and Puget Sound discharge; at Crockett are flouring mills, also the refinery of the California and Hawaiian Sugar Company. At Richmond one of the largest oil refining plants in the state is situated and during the last two years very extensive oil plants have been established at Martinez.

1918: Temperature...	102	27	Rainfall...59.58	Snow...0.1	

Del Norte is the extreme northwestern county of California and has a coast line of about 35 miles. Crescent City, the county seat and principal harbor, is 280 miles from San Francisco.

Smith and Klamath are the principal streams, the former in the northern and the latter in the southern part of the county. Both are navigable near their mouths to the small ocean-going steamers. Dairying and lumbering are the principal industries. The mountains of the county prospect well in copper and gold-bearing formations.

Crescent City is the chief shipping point. Products usually are sent to the San Francisco market. The county is rich in undeveloped mineral resources.

Del Norte rivals Alpine County in regard to inaccessibility, transportation being by wagon and mule back, with one or two stage lines to Crescent City. Its chief mineral resources, largely untouched, are chromite, copper, gems, gold, graphite, iron, platinum and silver.

**EL DORADO COUNTY.**

Date of creation, February 18, 1850.

		1890	1900	1910	1917 (estimated)
Land area, 1,753 square miles.	Population--	9,232	8,986	7,492	-----
County seat, Placerville.	Population--	1,690	1,748	1,914	2,150
Population per square mile, 4.3.					

	Highest	Lowest	Inches	Inches
Elevation, 1,875 feet.	1917: Temperature---105	18	Rainfall---20.58	Snow---15.0
	1918: Temperature---103	17	Rainfall---37.62	Snow---1.8

El Dorado County is situated on the western slope of the Sierra Nevada Mountains, in the eastern portion of the state. The county is about 75 miles long and about 30 miles in width. The western portion of the county borders the Sacramento Valley, and is used principally for grazing, stock raising, also grape and fruit growing. The central portion of the county includes the great mineral belt, known as the "mother lode," from which millions of dollars have been extracted on and near the surface in its infancy. It was in this county that gold was first discovered in California. There is also a large quantity of limestone in the county which is shipped for use in the manufacture of cement. In the foothills can be found some of the best fruit lands in the state.

The eastern portion, being at an altitude of from 3,000 to 7,000 feet, supplies summer pasturage for a number of cattle, sheep, and horses. In this region water is abundant, awaiting capital and labor to harness the everflowing streams. Most of this area is covered by a virgin growth of sugar and white pine, fir, and cedar timber.

While fruit growing has been found to be more profitable here than in most parts of the state, potatoes are now attracting much attention. There will probably be twenty thousand sacks or over raised in the vicinity of Placerville during this season. They are beautiful, smooth skinned, perfectly shaped, and, on account of the high dry altitude, are extremely mealy.

Several hundred acres of young pear trees have been planted in the last five or six years and in another year or two the output of Bartlett pears will have been doubled. In 1918, 295 cars of deciduous fruits were shipped east.

	1918: Temperature...107	25	Rainfall...13.68	Snow... 0

Including vineyards, Fresno County is the greatest fruit and wine producer. It is situated in the center of the state and in the middle of the fertile San Joaquin Valley. There are only five counties which exceed Fresno in size—San Bernardino, Inyo, Kern, Riverside, and Siskiyou, in the order named. When Fresno was first formed it was considerably larger, but on the eleventh of March, 1893, a large slice, consisting of 2,121 square miles, was carved out of the northern part of the county and formed into Madera County; and still more recently, Fresno County was again reduced in size by 202 square miles of the southeast portion being transferred to Kings County by an act of the legislature approved April 12, 1909. Before being partitioned, Fresno County comprised 8,214 square miles, but although the land area has been thus reduced to 5,950 square miles, the county ranks sixth of the fifty-eight in the state, and is one of the most productive. It is also the fifth largest in population, being only exceeded by San Francisco, Los Angeles, Alameda and Santa Clara. The word "Fresno," in Spanish, signifies ash tree, and it was because of the abundance of mountain ash in the mountains of this county that it received its name.

Fresno County is naturally subdivided into two portions—plains and mountains. The plains are the bottom of the San Joaquin Valley, extending from the foot of the Coast Range on the west to the foothills of the Sierra Nevadas on the east. From the first foothills the rise is rapid, the mountains culminating in peaks rising 10,000 to 12,000 feet, Mount Lyell being 13,217 feet high. The country about Fresno is a vast plain intersected by the San Joaquin and Kings rivers and their tributaries. Four natural soil divisions have been recognized—the foothill region, where agriculture was formerly confined to grazing; the plains of the valley, with red soils lying near the hills; the "white ash" soil found farther out in the plain, and the bottoms, or alluvial lands, along the Kings River.

There is a dry and a wet season, the former from about May to September, and the latter from the middle of October or early part of November. The rains, which are at irregular intervals during the winter, seldom last more than two or three days at a time. There are about 238 days of sunshine in the year. The atmosphere during the summer months is dry, and the heat not nearly so oppressive as in the East and other places where the humidity is great. Sunstroke is unknown.

The county has passed through four stages of development. First came mining in the early days before it was organized as a county, and this period extended to about 1860-64. Secondly, came the stock-raising period, which arose from the gradual disappearance of placer

mining, and lasted until 1874, although sheep raising still continued on a large scale; thirdly, about 1868, the farming interests sprang up although prior to the advent of a railroad in 1870, agriculture amounted to very little. The fourth, and most important, may be called the viticultural and fruit era, which began to come into prominence early in the eighties, and has now become the leading feature of the county.

As California holds the first place among all the states in the Union in irrigation, so Fresno is the leading county in the state, both in number and extent of its canals and ditches, having more than double the acreage under irrigation than has any other county.

During the last ten years, the dairy industry has made great progress, except in the manufacture of cheese, which, however, was never produced on a very large scale.

Including grapes, Fresno produces more fruit than any other county in the state. Fresno County holds the first place in the production of grapes, raisins, peaches, figs, sweet wines, and brandy, and is one the leading counties of the state in the production of apricots, and olives, and the acreage in figs and citrus fruits is rapidly increasing.

Fresno is one of the largest producers of olive oil and pickled olives in the state, both being of a very high grade.

In figs, the county has been a large producer for many years, and is noted for the now well-known Smyrna, or "Calimyrna" figs, which were first introduced into this state by George C. Roeding, of Fresno. The quantity now packed in Fresno amounts to several thousand tons per annum, and in 1917 upwards of 1,500 acres were planted.

Since 1884, when the White Adriatic was introduced into the county, the cultivation of figs has become an important industry. It is estimated that the total pack in 1916 amounted to 5,000 tons, of which about 3,800 tons were White Adriatic, 400 tons of Smyrna, and 100 tons of Black Mission figs.

The acreage in fruits in 1918 as estimated by Fred P. Roullard, County Horticultural Commissioner, is as follows:

	Acreage	Tonnage		Acreage
Peaches .....	20,427	17,000	Grapes--	
Apricots .....	1,316	*515	Muscat .....	73,950
Figs .....	1,663	†6,090	Thompson .....	44,078
Oranges .....	1,728	†122	Sultana .....	5,615
Olives .....	350		Malaga .....	12,794
Plums and prunes.....	512	800	Fehertzago .....	2,361
			Emperor .....	1,221
			Wine grape .....	8,058
			Consolidated report--	Tonnage
			Table grapes .....	49,250
			Raisin grapes .....	118,000
			Wine grapes (shipped).....	22,000

\*Shipping only. †Dried. ‡Cars.

For full details regarding raisins and peaches, see pages 169 to 170; 187 to 185.

The varieties of fish include salmon, black bass, trout, and catfish, all of which are plentiful.

There is an abundance of game, including quail, doves, a large variety of ducks and wild geese, but there is no means at present of ascertaining either the quantity or money value of either fish or game. The sums received for hunting licenses, however, are considerable.

The value of the lumber industry to the county is very large, upwards of two million dollars a year, comprising sugar pine, white pine, fir, and sequoia.

In Fresno, the canning and preserving industry, which in this city is confined largely to the drying of fruits, especially of raisins, was the leading industry of 1914, contributing 69.4 per cent of the total value of all manufactured products of the city. The city is one of the principal centers of the canning and preserving industry of the state, reporting nearly one-fifth of the total value of products for this industry in California, and a much larger proportion of the total value of dried fruits.

In 1909 the total value of all products amounted to \$11,090,000 and in 1914 to \$16,520,000, or an increase in five years of 49 per cent. Most of the fruit preserving of Fresno is by the drying or evaporating process, but the greatest crop is raisins, in which Fresno leads the world.

In recent years the production of petroleum in Fresno County has developed from a small beginning into one of the most important industries. In 1900 the wells in the county at Coalinga produced 532,000 barrels of the value of about \$547,960; in 1917 the production was 16,259,797 barrels valued at \$13,414,333. The county ranks third in the state in the value of minerals produced, the total in 1917 being \$14,158,052.

Glenn County occupies a central position in the Sacramento Valley, extending from the summit of the Coast Range across the Sacramento eastward, one-third being mountainous, but affording good summer pasturage for stock. About the same area is in the foothills, with many fertile ranches, and the remaining third practically a level valley floor of wonderfully fertile soil, which has for the past forty years been continuously cropped to grain and still continues to produce good crops.

The United States Reclamation Service has installed a system to irrigate 25,000 acres of the fertile lands about the town of Orland. This project is designed as a model irrigation system, and was undertaken by the reclamation service to demonstrate the benefits of irrigation under perfect conditions of soil and climate. The works consist of an impounding dam, situated at East Park in Colusa County, a diversion dam at the Buttes in Tehama County, and 99 miles of canals and main laterals, about 100 miles of small field ditches.

"The average sized farm under the Orland Project is about 19 acres. A very wide range of crops are grown under irrigation, including besides the common crops of alfalfa and grains, special crops such as citrus, almonds, prunes, olives, figs and the more common deciduous fruits. The county has 15,000 acres of young orchards.

"Another extensive irrigation system in the county comprises 150,000 acres along the Sacramento River, extending westward to the town of Willows. Much of the land under this project is as yet not in intensive crops. In the Ord, Hamilton, and Monroeville sections of this project, orchard industry is rapidly advancing. About 30,000 acres under this project is in rice production.

"Extensive areas in the county are cropped to dry land grain. About 80,000 acres of barley and 20,000 acres of wheat are grown annually. The grain area is being decreased annually by irrigation development with wells and pumping plants, there being about 12,000 acres under pumps in the county at the present time.

"The county has come forward rapidly in the production of pure bred livestock. The Orland district is the largest Jersey cattle section in the state. The county is in the first rank in the production of pure bred Berkshire and Duroc hogs."\*

The county roads are excellent. They are graded, graveled, and kept in splendid condition, the gravel in all parts of the county being particularly adapted to road making.

Glenn County is the hunter's paradise. Black bass, striped bass, salmon, perch, catfish, trout, and many other varieties abound in the

\*W. H. Heileman, County Agent.

Sacramento River, and the mountain streams are full of speckled trout, while the heavy growth of brush along the river banks and in the foothills is full of quail, deer, squirrels, and other game, whereas from the middle of November to the first of March, when the wild geese and ducks come into winter quarters, good sport is enjoyed. the hunters killing them by the hundreds.

**HUMBOLDT COUNTY.**

Date of creation, May 2, 1853.

	1890	1900	1910	1917 (estimated)
Land area, 3,634 square miles.	Population-- 23,469	27,101	33,857	38,787
County seat, Eureka.	Population-- 4,858	7,327	11,845	15,142

Population per square mile, 9.3.

	Highest	Lowest	Inches	Inches
Elevation, 65 feet.	1917: Temperature--- 82	27	Rainfall---28.73	Snow-- 0
	1918: Temperature--- 79	28	Rainfall---27.94	Snow-- T

Humboldt County has long laid virtually undisturbed in the north-western part of California. There is no section of the state today where natural resources give so great an opportunity for development.

While the greater portion of the county's surface is hilly, there is considerable level land around Humboldt Bay and along the numerous rivers which flow down from the mountains to the ocean. All of this land, both hill and dale, is very fertile and productive.

The abundant streams and springs throughout the county furnish plenty of pure water to its inhabitants the year round and render irrigation absolutely unnecessary.

"There is more redwood timber standing in Humboldt County today than in any other county of the State. Lumbering is the chief industry of the people. The output of the lumber and shingle mills and sash and door factories is greater than that of any other county in the state.

"Dairying is the chief agricultural industry of the county. State-wide competition has demonstrated that there are more high producing dairy herds in Humboldt County than in any other county of the state. The Cow Testing Association in the county has shown that the production of the dairy cows is far above the average. The average production per year per cow will reach nearly 200 pounds of butter fat. Humboldt stands second among the counties of the state in the production of butter.

"Fruit growing in Humboldt County has long ago passed out of the experimental stage. The apples of this county possess an exceptionally fine flavor and for the most part are very highly colored. Apple orchards in Humboldt County when properly cared for can be made to produce an abundance of fruit of the finest quality, which will command the highest prices on any of the important markets of the state. The codling moth, or any of the other pests which are so ruinous to the apple business in some of the other apple growing sections of the state, have not yet made their appearance in the county to any appreciable extent.

"The production of strawberries, loganberries and blackberries is destined to be one of the foremost pursuits of the people in the county. The soil of the cutover redwood land is particularly adapted to the production of small fruits and imparts to them a flavor of a very superior quality.

"Stock raising is carried on to quite a considerable extent, especially in the mountainous districts of the county. The breeding of sheep both for wool and mutton, is a very profitable industry and one gaining favor among the farmers throughout the county. Beef cattle can be found in large numbers in some sections.

"Gold mining is one of the minor industries which is carried on along the Klamath and Trinity rivers. Commercial fishing is another important industry in the county and during the last few years has been a very profitable one."\*

The railway from San Francisco has been extended through the county to Eureka and on to Trinidad, which will greatly help its development.

Eureka, the county seat and principal city, has many shipping and lumber manufactures, and during 1917 and 1918 the ship building industry has been largely extended.

Arcata, the town next in size, had an estimated population of 3,500 on January 1, 1915. It depends chiefly upon the farming and dairying region surrounding it, and also has a barrel stave factory, a tannery, and minor manufactures. The Humboldt State Normal School is located here.

Ferndale, estimated population 1,600, is in the heart of the Eel River dairying section. Farming and dairying are the leading industries.

Fortuna, estimated population 1,600, also in the Eel River Valley, depends upon farming, dairying and lumber manufacturing.

Blue Lake, population 700, in the Mad River farming district, depends upon farming and dairying.

Loleta, population 600, depends upon dairying and farming, and has a condensed milk plant.

Fields Landing, population 400, depends upon shipping and has the workshops of the Northern Pacific Railroad Company.

Scotia, 1,300; Samoa, 1,000, and Korbel, 700, are each sawmill towns, devoted almost wholly to lumber manufacturing.

#### HUMBOLDT COUNTY SUMMARY.

(Census 1910.)

Number of Farms Classified by Size.		Value of All Farm Property.	
Under 3 acres .....	10	Total value in 1910.....	\$21,230,881

Average cost per acre irrigation enterprises were capable of irrigating in 1910 .....	87.17

## IMPERIAL COUNTY.

Date of creation, August 15, 1907.

(Organized from part of San Diego County.)

	1890	1900	1910	1917 (estimated)
Land area, 4,089 square miles.	Population--	-----	13,591	22,286
County seat, El Centro (city).	Population--	-----	1,610	6,000
Population per square mile, 3.3.				
Station,	Highest	Lowest	Inches	Inches
Brawley, —105 feet.	1917: Temperature...118	30	Rainfall... 1.84	Snow... 0
	1918: Temperature...115	25	Rainfall... 1.94	Snow... 0

Imperial is the youngest county in the state, having been formed in 1907, from the eastern part of San Diego County, formerly known as the "Colorado Desert, or Imperial Valley." The progress of the county is practically confined to the central part of the valley. Imperial County is well known as the largest producer of cotton in California. In 1918 there were three cottonseed oil mills, two compressors and 26 cotton gins in the valley.

The cultivation of cotton holds a most important part in the industrial development of Imperial County.\*

Imperial Valley is 110 miles long by 40 miles wide, half in California, half in Mexico. The present irrigated area is 40 by 25 miles in California. Irrigated from the Colorado River, from which 50,000 miner's inches are available. The surface appears to be perfectly level, but slopes gradually northward, affording a sufficient fall for the waters of the irrigation system.

About 125,000 acres in the valley is in alfalfa and is the basis of its live-stock farming.

Imperial Valley is one of the best stock, hog, and poultry-producing counties.

Dairying is very profitable, owing to the fact that alfalfa grows throughout the winter, furnishing an abundant supply of green pasturage. Modern creameries, with latest appliances, are located in different sections. In the production of butter the county ranks third, the output being only exceeded by Stanislaus and Humboldt counties.

The irrigation system which supplies the valley with water from the Colorado River is the largest unit project in the United States and is operated by the people of the valley themselves. Approximately 500,000 acres are in cultivation in the valley. The chief engineer of the system says the present supply of water is safe for 1,200,000 acres and that with the construction of one or two reservoirs, which will store 2,000,000 acre-feet of water, the supply will be adequate for every acre of land susceptible of irrigation from the Colorado River.

At El Centro, a plant has been established for the manufacture of cottonseed oil and cottonseed cake on which a large number of cattle are fattened.

The crops consist mostly of alfalfa, barley, corn and cotton, and cattle.

"Since the year 1912, and including the year 1918, the following fruit and other trees have been brought into the county: 19,325 apricot, 256,223 berry, 5,347 fig, 14,125 grape, 2,994 lemon, 24,552 olive, 45,191

\*For details regarding the cotton crop, see pages 118-122.

orange, 18,482 peach, 9,387 pear, and 659,378 ornamental. A few imported date palms and many thousand date seeds have been planted. This gives an idea as to the principal kinds of fruit now growing in the county.

On account of the extremely long hot season, fruit ripens very early, going on the market the first of the season with no competition, the producers thereby receive very attractive returns. Grapes are one of the best and leading fruits of the valley, the early varieties, Persians, begin ripening the first of June, followed closely by the Thompson seedless, then the Malagas, which continue through the shipping season to about the last of July. Many other varieties do well here that have not been successfully grown in other sections of the state. Experiments are being made with many other varieties and there are some now very promising that may take the place of the present commercial varieties. There are 1,010 acres of old bearing vines and several hundred acres of new plantings. About 180 cars of the fruit crop are shipped East each year.

Grapefruit has proven to be the best of the citrus fruits, young trees three years old have the size of trees in other localities twice their age and yield considerable fruit. There has been more grapefruit trees planted in this county than any other variety. The largest single orchard amounts to 60 acres.

Lemons do very well, growing a very juicy fruit, with thin skin and full of acid.

Many varieties of oranges have been tried out, the seedlings produce the best quality of fruit. However, the Washington navels ripen the first of November and should be picked as soon as ripe for best results.

There are many olive trees planted in different sections of the valley, the largest orchard consists of 40 acres. Of the deciduous fruit, the apricot is in the lead. The early varieties ripen by April the twentieth, and shipments continue until the last of May. Newcastle and Royal are the principal varieties. It is almost unbelievable how fast apricot trees grow in this valley, with good care a year old tree is the size of a tree in other districts three years old.

Nearly all varieties of peaches have been tried, and the Chinese and southern varieties have proven to be the most profitable. However, peaches are not considered commercially.

Pears are being tried out on quite a large scale, one orchard consists of 60 acres and is reported as successful.

This is a natural country for the fig which produces large firm quality fruit.

This county produces more cantaloupes than any one state in the Union.

Asparagus is one of the products of this valley that brings the greatest returns to the owners of any of the present crops. The season opens about the fifth of February and continues for a couple of months. Early in the season it is not uncommon to receive one dollar and twenty-five cents a pound in the East.

The commercial berry is the strawberry and they do well, producing a fine fruit and netting the grower a handsome profit. In 1917 six cars were shipped and it is estimated for 1918 that there will be fourteen carloads.

Imperial County is in the southeast corner of the state. In 16 years it has been reclaimed from a desert waste and developed until the population today is 45,000, where before there was none, and has an actual property valuation of \$90,000,000, where before was worthless. It is sometimes referred to as 'Barbara Worth's country,' being the locale of a novel of similar name.'\*\*

**INYO COUNTY.**

Date of creation, March 22, 1866.

Land area, 10,019 square miles.	Population.....	1900	1910	1917
County seat, Independence (township).	Population.....	4,377	6,974	8,871
Population per square mile, 0.7.		820	701	-----

	Highest	Lowest	Inches	Inches
Elevation, 3,907 feet.	1917: Temperature...102	—1	Rainfall... 2.11	Snow... 6.0
	1918: Temperature...101	14	Rainfall... 4.02	Snow... 5.9

“Inyo County lies on the eastern side of the Sierras adjoining Nevada. The western boundary of the county is the saw-toothed range of the Sierras, rising to altitudes of nearly 15,000 feet and covered with eternal snows. Flowing out of these mountains down into Owens Valley are numerous streams. Many of them have been utilized by the power companies and the energy derived from these power plants is used in many of the mining operations of western Nevada and even in Mexico, power from Inyo County is used. These streams are abundantly stocked with trout and here is the real paradise of the angler. The golden trout is one of the species that does exceptionally well in this section. The Whitney state hatchery, near Independence, one of the finest propagation plants in the world, annually supplies the necessary plantings of trout fry.

“In the central section of the county lies the fertile Owens Valley. It varies in width from 2 to 15 miles, and is over 100 miles in length. Cattle and sheep are raised in large numbers. Alfalfa is a staple crop, but fruit and berry raising is coming to the front, particularly in the Bishop, Fish Springs and Manzanar districts. Cattle raising and sheep raising are big enterprises in Owens Valley, as the forest reserves furnish splendid ranges in summer. The winter feeding season is short.

“In borax, the Death Valley (290 feet below sea level) plant furnishes the major portion of that produced in California. Soda is produced in large quantities at various plants on Owens Lake. Salt is extensively produced in Saline Valley. Tungsten is mined at several large properties near Bishop. Large undeveloped holdings of potash are being prospected in the vicinity of Deep Springs and it is said they will supply the needs of the United States for that important mineral when developed. More lead and zinc are produced in Inyo County than in any other county in the state.

“Inyo has a diversified topography, claiming Mt. Whitney, the highest mountain in the United States, and the lowest depression, Death Valley.

“The city of Los Angeles has an aqueduct connecting that city with the Owens River, and all the surplus waters of that stream are taken by this means to Los Angeles. Immense storage plants are in contemplation for the storage of all the flood waters of the valley for agricultural and power purposes.

“The tourists have found the high altitudes, the mountain lakes and streams, the delightful climate and the fertile valley to their liking, and with the advent of better highways, their business promises to be increased. Thousands, as it is, motor to this country every summer for their recreation.

"Sugar beets are a proved success and attempts are being made this season to raise rice, with every prospect of making good.

"Bishop is the largest town in the valley. Big Pine, Lone Pine, Keeler and Manzanar are thriving towns."\*

\*Dan E. Williams, County Clerk.

			Snow...	0

Kern County, situated at the extreme southern end of the San Joaquin Valley, its eastern boundary extending on to the Mojave Desert over the extreme southerly end of the Sierra Nevada Mountains, is the third largest county in the state.

At Randsburg, on the eastern border, is one of the largest gold mines on this coast, and the county around Randsburg has many smaller mines.

Along the southern border where the line crosses the San Emidio Mountains are large deposits of iron ore and antimony, which are yet undeveloped. Along the western side of the county are the Sunset, Midway, McKittrick and Lost Hills oil fields, lying along the eastern base of the Coast Range Mountains.

In the northeastern part is the mining town of Kernville, surrounded by mines, and near it on the south fork of the Kern River is the South Fork Valley, where numerous stockmen have their alfalfa fields that furnish feed to the stock that pasture in the high Sierra in the summer time.

In the center, and surrounding the town of Bakersfield, the county seat, lie thousands of acres of fertile land that are irrigated by Kern River, and which are mostly used to raise stock and alfalfa, but large quantities of fruit, including oranges, are also raised in the county. The acreage in apricots, peaches, prunes, pears, olives, and oranges has increased very considerably in the last five years.

Kern County is a long way ahead of all others in the value of minerals produced, amounting in 1917 to \$19,743,422. The greater part of this sum is derived from the extensive oil fields which produced 53,065,066 barrels, valued at \$47,387,104.

In the northern part of the county surrounding the towns of Delano and McFarland, is a large body of good land now being developed into a rich farming and fruit growing section. Rice has been successfully grown at Wasco and that vicinity for several years. In 1917, 1,280 acres were planted, and a new modern mill was installed at Wasco.†

Cotton was planted in 1918 as an experiment in a number of sections. Arvin had the largest acreage, and Egyptian long staple was the only variety grown, as in Fresno and adjoining counties, and a cotton gin has been established at Bakersfield.†

In the oil fields the development work is continuous. Lost Hills is being developed, and the discoveries there indicate that the petroleum-bearing territory is continuous from Sunset to the north line of the county.

\*Kern City annexed to Bakersfield in 1909.

†For full details regarding the rice and cotton crops, see pages 114-122.

## KERN COUNTY SUMMARY.

(Census 1910.)

Number of Farms Classified by Size.

**KINGS COUNTY.**

Date of creation, March 22, 1893; organized from part of Tulare County; extended in 1909 by annexation of part of Fresno County.\*

	1890	1900	1910	1915 (estimated)
Land area, 1,159 square miles.	Population--	9,871	16,230	-----
County seat, Hanford (city).	Population--	942	2,929	4,829
Population per square mile, 14.0.				6,250

	Highest	Lowest	Inches	Inches
Elevation, 249 feet.	1917: Temperature---110	20	Rainfall---4.43	Snow-- 0
	1918: Temperature---108	22	Rainfall---12.51	Snow-- 0

In the very heart of the great fertile valley of the San Joaquin lies Kings County, one of the smallest, one of the youngest, but one of the most fertile counties in the state.

"In the northern part of the county raisin grapes, peaches, apricots and prunes thrive best. The bulk of these crops is dried or canned, the product being handled by conveniently located canneries and packing houses. These fruits alone net the growers well into the millions of dollars annually.

Alfalfa growing, hogs and dairying in Kings County make a combination which is hard to beat, as the county is recognized by the agricultural world as the home of pure bred live stock. Creameries and cheese factories are so located as to be convenient to all dairying sections.

On the shores of Tulare Lake a vast empire has been reclaimed by the building of levees, and here, protected from the flood waters, thousands of acres are farmed to wheat and barley by the use of modern machinery.

No slight contribution to the ease and low cost of marketing farm products is the fine new highway system which connects all the agricultural communities of the county.

Grain sorghums, sugar beets, honey, and many other products of the soil contribute largely to the wealth of this rich little San Joaquin Valley county. In the coming season about 1,200 acres of Egyptian long staple cotton is being planted.

Kings River supplies most of the water for irrigation. However, in 1872 a plan for using the waters of the Kaweah River or Cross Creek was put into practical operation and since that time this stream though smaller than the Kings River, has been doing its full share. The principal irrigation companies supplying water at the present time are the Peoples Ditch Company, the Last Chance Ditch Company, the Lemoore Canal and Irrigation Company and the Lakeside Ditch Company. There are also several smaller ditches in operation."†

\*202 miles of Fresno and 96 miles of Tulare counties were annexed in 1909.

†Fred K. Howard, County Horticultural Commissioner.

**LAKE COUNTY.**

Date of creation, May 20, 1861.

	1890	1900	1910	1917 (estimated)
Land area, 1,278 square miles.	Population-- 7,101	6,017	5,526	-----
County seat, Lakeport (town).	Population-- 991	726	870	1,100
Population per square mile, 4.3.				

(Station):	Highest	Lowest	Inches	Inches
Elevation, 1,350 feet.	1916: Temperature---105	12	Rainfall---23.72	Snow--25.3
	1917: Temperature---108	23	Rainfall---11.83	Snow-- 'T
	1918: Station discontinued.			

The county is located in the heart of the Coast Range, about 100 miles north of San Francisco, and is about 75 miles long and 25 miles wide. Mount St. Helena guards the southern extremity. Clear Lake is a splendid sheet of fresh water 25 miles long and from 2 to 10 miles broad, with the lake surface at an elevation of 1,350 feet above sea level. It is stocked with a large quantity of fish. Clear Lake is the pride of Lake County, as well as the source of its name.

Although classed as mountainous, Lake County has a number of very fertile valleys, some of them being of large area. The acreage in farm crops is small compared with most other counties, but a considerable quantity of peas and beans are raised for canning purposes. Artesian water is obtainable in profuse quantities.

"In 1918 there were about 6,500 acres of orchard and vineyard in Lake County, 3100 acres being in Bartlett pears, viz: 700 in bearing, 2,400 non-bearing; 1,430 acres being in prunes, viz: 550 bearing, 880 non-bearing; 545 acres being in almonds.

Lake County stands in a class by itself for dried Bartlett pears, and commands a preferential rate of 3 cents a pound over any other county, inasmuch as she dries entire crops of pears, whereas other counties dry only the culls.

In 1918 780 tons of dried pears were shipped out and 511 tons of green pears.

In 1918 1,240 tons of prunes were shipped out (crop of 1918 being lighter.)

There is a yearly increase in the planting out of Bartlett pears and prunes, almonds and walnuts. Within the last five years 133,384 Bartlett pears have been planted out. Within the last five years 66,211 prune trees have been planted out.

Upper Lake is noted for its canned string beans."\*

The rocky hillsides furnish pasturage for flocks of Angora goats. Large bodies of sugar and yellow pine, fir, cedar, and oak give employment to several sawmills and furnish the home market a good quality of lumber.

The minerals have heretofore been represented principally by quicksilver. Besides quicksilver, immense quantities of mineral water have been bottled at the many mineral springs and shipped to all parts of the country. Lake County has fifty-six mineral springs, or more than any other county in the state.

\*Fred G. Stokes, County Horticultural Commissioner.

Lassen County lies in the northeastern part of California along the Nevada line. It is traversed from south to north by the Nevada-California-Oregon Railway (narrow gauge), which connects at Reno, Nevada, with the Southern Pacific system. Susanville, the county seat, is in Honey Lake Valley, a little south of the center of the county. Lassen embraces large areas, comprising rich valley lands, suited to agriculture; rolling hills and uplands, affording splendid range for stock, and mountain tablelands covered with timber.

The principal present industries are farming and stock raising.

The altitude of the largest, most fertile, and most productive valleys, such as Honey Lake Valley, Big Valley, and Long Valley, is a little over 4,000 feet. Other large valleys, like Madeline Plains, Willow Creek Valley, and Secret Valley, are in the neighborhood of 5,000 feet above sea level. While the high valleys are not as well adapted to general farming as the lower ones, they are quite productive, and well suited to the stock-raising business. The climate generally is similar to that of the northeastern states, so far as range of temperature is concerned, but the summer season is quite dry, making irrigation necessary as a rule. Of farm products, alfalfa is probably the most important, though native grasses, timothy, and redtop are extensively raised.

Good hay and grass and pure cold water make the county an ideal one for dairying. There are a number of creameries in the county.

	1918: Temperature...100	37	Rainfall...17.49	Snow... 0

In wealth, population, and resources Los Angeles is the most important county in southern California. There are two rivers in the county, the Los Angeles and the San Gabriel. During a large part of the year these are dry beds of sand, what little water they contain finding its way through the porous sand to the bedrock. In the winter they are liable to flood. The Los Angeles River rises in the western part of the San Fernando Valley, about 12 miles northwest of the city.

Los Angeles County embraces within its limits a great variety of scenery and climate. Within its territory may be found the climate and scenery of almost every part of the state, from the cool and breezy seashore to the warm inland plains and bracing mountain tops. Of the area of the county, about four-fifths is capable of cultivation, the remainder being mountainous. The shore line is 85 miles in length. Nine-tenths of the population is within thirty miles of the ocean.

The chief industry is horticulture, the list of products including everything that can be grown in the state. The area of land devoted to horticultural purposes is being rapidly extended as the large tracts are subdivided and improved.

Adjoining San Gabriel Valley on the east is Pomona Valley. Irrigation is cheaply supplied to this section from the San Antonio River. The soil and climate are particularly adapted to the culture of citrus fruits. It contains a number of flourishing towns, the chief of which is Pomona, one of the most thriving cities in southern California.

The development of the horticultural industry during the past few years has been remarkable. The most important horticultural product is the orange. Besides the orange and lemon, the principal fruits raised are the almond, fig, olive, prune, apricot, walnut, peach, pear and berries. Deciduous fruits are shipped fresh, canned, dried and crystallized.

One of the most important enterprises for Los Angeles is the big breakwater built by the federal government at San Pedro. Other shipping points of the county are Port Los Angeles, near Santa Monica, Redondo and Long Beach.

The San Gabriel Valley, a choice section of Los Angeles County, has the Sierra Madre Range on the north. The mountains are grand and precipitous, enclosing the valley like a wall. This valley is the best known of any portion of southern California.

The valley contains 100 square miles of territory. The San Gabriel contains some of the choicest fruit lands in southern California, and is largely devoted to the raising of oranges and lemons, as well as deciduous fruits.

Pasadena, a beautiful city of 40,880 population, is located at the foot of the Sierra Madre Range, about seven miles from Los Angeles. Within twenty years Pasadena has grown from a sheep pasture to a city of beautiful homes.

Ostriches are raised for their plumes. There is a large ostrich farm at South Pasadena.<sup>†</sup>

Los Angeles and Long Beach are the headquarters of the fish canneries and shipbuilding industries. In the tuna industry only 42,000 cases were packed in 1911, but it has grown until 560,000 cases were packed in 1917.

In 1918, gold of the value of \$3,614, and silver \$2,234, or a total of \$11,048, was imported into the Southern California Customs District, but there were no exports. Merchandise of the value of \$9,885,619 was imported and \$7,502,399 exported.

## LOS ANGELES COUNTY SUMMARY FOR 1918.\*

	Number	Value

**MADERA COUNTY.**

Date of creation, March 11, 1893.

	1890	1900	1910	1917 (estimated)
Land area, 2,112 square miles.	Population--	6,364	8,368	9,381
County seat, Madera (city).	Population--	-----	2,404	3,300
Population per square mile, 4.0.				

Storey (Station):	Highest	Lowest	Inches	Inches
Elevation, 296 feet.	1916: Temperature---105	26	Rainfall---18.02	Snow--- 0
	1917: Temperature---107	24	Rainfall--- 4.99	Snow--- 0
	1918: Station discontinued.			

Madera County is in the center of the San Joaquin Valley, bounded on the north by Merced and Mariposa counties, on the southeast and west by Fresno County, from which it was formed in 1893. The eastern portion of the county extends far up in the Sierra Nevada Mountains. From the foothills to the San Joaquin River, a distance of about forty miles, the land is level and adapted to all kinds of agricultural pursuits. The higher mountains are heavily timbered with valuable wood, principally sugar and white pine. Lumbering, stock raising, quarrying, mining, fruit growing, and farming are the principal industries. There are two large wineries in the county. The power plant of the San Joaquin Light and Power Company is near North Fork, in this county. The granite quarries at Knowles furnish employment to a large number of men.

Irrigation water is now secured chiefly from wells, which at a shallow depth give good supply. About 10,000 acres is the extent supplied from sources other than wells, but there is strong agitation for the formation of an immense irrigation district, to bring gravity water from the San Joaquin and Fresno rivers to an area of 100,000 acres or more. To further this the Madera County Irrigation Bureau was organized and has done active work.

This county, until recently, was one of large individual land holdings. A single firm owned over 200,000 acres; another 108,000 acres; thousand-acre ranches were not considered large. Now the big holders are beginning to subdivide and the modest rancher who seeks to make a living on forty, sixty, or eighty acres, is coming more and more into his own. The Chowchilla Ranch was opened for sale in October, 1912; it is situated fourteen miles north of Madera, the county seat, and great progress has been made in its development.

Alfalfa fed to hogs and cows is one of the chief sources of gain. A large co-operative creamery in Madera monthly disburses thousands of dollars to dairymen. Fruits do well, raisins, figs and olives being among the leading crops.

In 1918, about 50 acres of Egyptian long staple cotton was grown on one ranch, which yielded 9 bales, and 25 acres of Durango, which produced 4 bales.

The Mother Lode of the Sierra Nevadas extends into this county and along it are located many gold mines, some of which have earned records as producers. There are also deposits of iron ore and some copper. These are difficult of access and development has been greatly retarded on this account. Iron ore from the Minarets district runs 65 to 70 per cent. There are known deposits of lead, tin, zinc, tungsten, cobalt,

asbestos and platinum, and the problem of their development is one of transportation. Listed among the largest granite quarries in the state, those near Raymond have supplied stone for San Francisco's city hall, post office and other large structures.

The Mariposa Big Tree Grove skirts Madera County and the mountain highway offers great scenic beauties to the tourist bound for Yosemite Valley, just below its borders.

The state highway intersects Madera County north and south.

## MARIN COUNTY.

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 529 square miles.	Population-- 13,072	15,702	25,114	31,985
County seat, San Rafael (city).	Population-- 3,290	3,879	5,934	6,000
Population per square mile, 47.5.				

Point Reyes (Station):	Highest	Lowest	Inches	Inches
Elevation, 490 feet.	1917: Temperature--- 90	32	Rainfall--- 8.34	Snow-- 0
	1918: Temperature--- 81	38	Rainfall---15.38	Snow-- 0

Marin County is decidedly one of water frontage, being bounded on the west and south by the Pacific Ocean and by the Golden Gate, which separates it from San Francisco by only a mile and a half at its nearest point, and on the east by San Francisco Bay.

The topographical features are rolling hills and numerous small valleys. A part of the Coast Range crosses Marin in a northwesterly and southeasterly direction, and much of the surface of the county is broken and hilly, but a considerable portion immediately on the shore is composed of marsh and overflowed lands. A part of the Coast Range crosses the county, the highest point of which is Mount Tamalpais, which has an elevation of 2,520 feet.

The principal industry is dairying, but of late years attention has been paid to fruit growing in the Novato district.

At Bivalve on Tomales Bay are located the largest oyster beds in the state. There are also the shrimp fisheries at Point Pedro, the crab fishing with headquarters at Sausalito, the Booth Sardine Cannery at Hamlet. Potato and bean raising chiefly in the northern end of the county around Tomales and Fallon. Hog, poultry and Belgian rabbit raising throughout the county. There are also a number of sheep raised in the county.

Grapes -----	250	Total acreage fruits -----	947
Almonds -----	18½		

\*The Spreckels Sugar Co. have 1,250 acres in sugar beets near Ignacio as a result of the favorable test of 12 acres grown in 1918 at Marin Meadows near Ignacio on what was formerly overflowed marsh land.

†Thomas P. Redmayne, County Horticultural Commissioner.

The new plantings of fruit trees will bring the total acreage in fruits to over 1,000 acres. Pears, apricots and prunes are of late taking the lead. Milk and milk products production are still the chief industry—in fact, it is at its high point at present. As a consequence, hog raising is on the increase. A company is now raising a great many hogs at Gallinas.

	1918: Temperature---	98	8	Rainfall---34.45
				Snow. 91.5
				Snow. 0

The county reaches eastward from the edge of the San Joaquin plains across the foothills far into the Sierra Nevada Mountains, its altitude varying from 300 to 13,000 feet, Mount Dana, the highest point of land, reaching an elevation of 13,627 feet.

There are about 300,000 acres of plains and lower foothills together, the latter predominating, and the balance consists of high hills and mountains; bare of timber on the plains, then scattering oak and scrub pines, then rising to immense tracts of sugar and yellow pine, fir, spruce, and cedar, and the giant sequoias of Mariposa Big Tree Grove, which contains some 427 trees, many of 35 feet in diameter and 150 to 300 feet high. The county is well provided with water in the Merced, Mariposa and Chowehilla rivers. The famous Yosemite Valley is located in the eastern part of this county, at an elevation of 4,060 feet, with walls 5,000 feet higher. The Merced River flows through the valley.

There are three mining belts in the county—the Mother Lode with its offshoots, the east belt, and the copper belt.

Irrigation is practiced to some extent, water being taken from streams and mining ditches, and used with good results.

**MENDOCINO COUNTY.**

Date of creation, February 18, 1850.

		1890	1900	1910	1915 (estimated)
Land area, 3,453 square miles.	Population--	17,612	20,465	23,929	26,458
County seat, Ukiah (city).	Population--	1,627	1,850	2,136	2,600
Population per square mile, 6.9.					

		Highest	Lowest	Inches	Inches
Elevation, 620 feet.	1917: Temperature---	106	16	Rainfall---25.20	Snow-- 0
	1918: Temperature---	110	18	Rainfall---26.57	Snow-- 0

Mendocino County has 100 miles of coast line. In general topography it is mountainous, with valleys lying between the mountain chains and along the coast. It, together with the counties of Humboldt and Trinity, embodies the greater part of the northern Coast Range Mountains, and contains their highest peaks and deepest canyons, fertile valleys, wooded slopes, rushing rivers, and picturesque scenery. It shares with Sonoma, Humboldt and Del Norte the glory of the great redwood belt.

The county has a length of 85 miles from north to south, and the width is 45 miles from east to west. It is traversed the entire length by the Coast Range, which is composed of two parallel ridges. These mountains vary in height from 1,000 feet to 3,000 feet. Their lower slopes have a gentle declivity, while the higher portions are generally precipitous and furrowed with ravines and gulches. There are many small productive valleys throughout the county.

The Eel River, running north, and the Russian River, running south, have their sources in this county, and are the principal streams.

Stock raising, grazing and wool growing are the principal industries, there being an abundance of summer and winter pasture.

The Angora goat thrives well, the mountains being an ideal pasture.

No irrigation is required, and crops do not suffer from drought at any time.

In the county are large tracts of redwood, and it also has a large number of mineral springs.

Mendocino is one of the leading counties in the production of hops.

Orchard fruits do well and the acreage of cherry, peach, pear and prune trees has considerably increased the last few years, especially in pears and prunes.

Good highways bring San Francisco within a five-hour trip.\*

---

\*E. W. Dutton, Horticultural Commissioner.

**MERCED COUNTY.**

Date of creation, April 19, 1855.

	1890	1900	1910	1917 (estimated)
Land area, 1,995 square miles.	Population__ 8,085	9,215	15,148	19,479
County seat, Merced (city).	Population__ 2,009	1,969	3,102	4,000
Population per square mile, 7.6.				

	Highest	Lowest	Inches	Inches
Elevation, 173 feet.	1917: Temperature___108	21	Rainfall___5.33	Snow__ 0
	1918: Temperature___106	24	Rainfall___14.97	Snow__ 0

Merced County lies nearly in the center of the state and a little north of the center of the San Joaquin Valley. It extends entirely across the valley from the foothills of the Sierras to the crest of the Coast Range mountains. The San Joaquin River divides it into two nearly equal parts. The entire central part of the county is irrigated. Outside of the irrigated district is a strip of land devoted to dry grain farming, while the rougher lands above are devoted to pasturing beef cattle and sheep.

Irrigation water is supplied by canals from the San Joaquin, Merced, and Tuolumne rivers as well as pumping plants. Petitions are being circulated for the organization of an irrigation system under the Wright law to cover 175,000 acres.

Merced County grows half the sweet potatoes produced in California. It has the largest area planted to figs except Fresno—over 900 acres were set out to figs east and north of Merced city in 1919. Livingston is believed to have the largest raisin vineyard in the world—1,620 acres in one rabbit-proof fence. Canning, drying, and shipping figs, peaches, almonds, early table and raisin grapes, early tomatoes, egg plant and other truck crops, prosper. Dairying, poultry raising, beef cattle and hog raising are important. The irrigated district of the west side of the county is almost entirely devoted to dairying and beef cattle. The progress of the county has been retarded by large holdings farmed to grain, but they are being broken up and subdivided into colony lots.

Merced County is well supplied with transportation facilities—both by rail and public highways. The two main lines of the Southern Pacific and the main line of the Santa Fe cross the county. The Oakdale branch of the Southern Pacific connects Merced and Stockton and the Yosemite Valley Railroad connects Merced and the entrance to the Yosemite Valley. The Tidewater and Southern Electric runs from Stockton to Hilmar and will soon extend across the Merced River to Stevinson Colony.

The valley branch of the state highway crosses the county. The construction of the branch state highway from Merced to Mariposa was interrupted by the war, before completion, but construction will be resumed at once. The county has just sold bonds for the sum of \$1,250,000 to build a system of county highways. Including \$1,000,000 subscribed by automobile owners, acting through the California Auto Association, \$1,875,000 is available to complete the highway from Merced to the entrance of the Yosemite Valley, at Bagby. These sums, together with the bond issue by the state, will assure a state highway from the Yosemite Valley to the sea, including \$450,000 for the Pacheco Pass road in Merced County.

Trains on the Yosemite Valley Railroad and luxurious auto stages carry visitors to the Yosemite Valley from Merced City. Many parties also travel in their own autos. Except for a few days in winter, the road to the valley from Merced is open the year around. Yosemite Valley is both a summer and a winter resort.\*

Modoc County is in the extreme northeastern corner of California. The county is a succession of mountain ranges and valleys branching off from the Sierra Nevada Mountains, the principal spur of which is the Warner Range. It is principally drained by Pit River, which flows into the Sacramento, near Redding, Shasta County. The lava bed section occupies over one-half the total area. The county has two large lakes, but barring the lakes and the large cattle ranges, it is sparsely settled.

The valleys are the principal features, the leading ones being the Surprise, Goose Lake, Hot Springs, Jess, Big and the Little Hot Springs.

Wheat, barley, apples, vegetables, and hay are the leading staples. Thousands of acres are in alfalfa, and the stock and dairying industries are thriving. Snow falls in the valleys and much deeper in the mountains, forming the principal supply of moisture for the development of the country. Stock is usually fed for several months through the winter, although it is not always necessary to do so.

The county is well watered. Surprise Valley has nearly twenty streams, which run both winter and summer. Goose Lake Valley is equally fortunate, which Pit River supplies with water for many farms and ranches. Many springs exist, especially in the mountains, and in the Surprise Valley there are many artesian wells.

The timber of the county is pine and fir in the Warner Range, and sugar pine in the western part.

Horticulture has had but a small place in the industries, only sufficient fruit for home uses being raised. The wild plum is about the only native fruit.

**MONO COUNTY.**

Date of creation, April 24, 1861.

		1890	1900	1910			
Land area, 3,030 square miles.	Population-----	2,002	2,167	2,042			
County seat, Bridgeport, township.	Population-----	335	373	312			
Population per square mile, 0.7.							
	Highest	Lowest	Inches	Inches			
Elevation, 6,500 feet.	1917: Temperature---	85	-33	Rainfall---	4.99	Snow---	39.6
	1918: Station discontinued.						

Mono is a long narrow county lying on the eastern slope of the Sierras, its greatest length bordering on the state of Nevada, which forms its northeastern boundary, its general direction being northeast and northwest.

The general contour is mountainous and very rough, all but 400 square miles, or less, being mountainous. The western portion lies among the Sierra Nevada Mountains, along their summit, the heights being clad in snow, and the slopes of the range being covered with forest trees.

Among the highest peaks are Mount Dana, 13,627 feet; Mount Lyell, 13,217 feet, and Castle Peak, 13,000 feet. The greater portion of the population is in the eastern part, in the valleys and the mining camps in the surrounding mountains. This portion, which has always been considered a strange, mysterious country, is of a desert-like, volcanic character, abounding in salt pools, alkali, and volcanic table-lands.

Mono Lake, the "Dead Sea of America," is one of the attractions, and is situated in the center of the county; it is about 12 miles long and 8 miles wide; its waters are somewhat unusually compound, various chemical substances being found in solution in them. The lake has a number of small streams flowing into it, but is without perceptible outlet.

Owens River in the south, which takes its rise in a high peak in the Sierra, and Kitten and Walker rivers in the north, are the principal streams. One passes through the southern part into Inyo County. The other, after rising in Mono County, continues its course into the state of Nevada. These two streams with their branches, together with the small streams that flow into Mono Lake, furnish the principal water supply for irrigation. There are 20 mineral springs in the county.

Grazing is the leading industry, and the pasturage is good and plentiful. Herds of dairy cattle are moving from the valleys during the summer. Large bands of sheep are also driven to its mountains for summer pasturage.

The timber belt is very large and the product of good, marketable quality, but as there is no means of transportation, the development of the lumber interests is retarded, although considerable quantities are used for local mining purposes.

Elevation, 40 feet.	1917: Temperature... 97	23	Rainfall... 5.17	Snow... 0
	1918: Temperature... 98	21	Rainfall... 17.74	Snow... 0

Monterey County is situated about 100 miles south of San Francisco and 300 miles north of Los Angeles, on the Pacific Ocean. It is 124 miles long and 45 miles wide, its extreme length being from north to south.

The county is divided into three sections—the mountains and hills on the east, mountains and hills on the west, and the great Salinas Valley situated between these ranges of mountains.

The portion of Pajaro Valley lying south of the Pajaro River and running to Monterey Bay on the southwest is in Monterey County, and is about 15 miles long and from 6 to 8 miles wide. The land is exceedingly fertile and under a thorough system of cultivation, producing large crops of all kinds of vegetables, grain, fruit, and berries.

There is a considerable acreage in sugar beets, and the largest sugar factory in the state is the Spreckels, situated near Salinas City, having a daily slicing capacity of 4,000 tons.

In the southern part of the county barley excels, and prunes, apricots, cherries and almonds grow to perfection in the foothills, canyons, and small valleys.

The greatest apple district of the state is in the Pajaro Valley, which includes also parts of Santa Cruz County, centering at Watsonville.

Currants, gooseberries, blackberries, loganberries and raspberries grow well. Strawberries are in the market most of the year, and are shipped from Watsonville by carloads.

Dairying is very important, if not a leading industry. Some of the finest dairies in the state are in Monterey County, and some of the best cheese and butter in the state are made here.

In the harbor of Monterey Bay the largest battleships of our navy find anchorage within 100 feet of the shore. The fishing industry is an important one, especially for salmon and sardines. More than two-thirds of the abalone catch of the state also comes from this bay.

Elevation, 225 feet.	1917: Temperature... 107	23	Rainfall... 13.64	Snow... 0
Napa, 20 feet.	1918: Temperature... 98	23	Rainfall... 19.75	Snow... T

The principal resources of Napa County are the raising of grapes, the making of wine and of grape juice; raising of prunes, pears, plums, and other fruit, and growing of grain. The value of mineral products is also considerable. There is a large cement manufactory at Napa Junction. Among the minerals produced in 1916 are magnesite of the value of \$108,556, quicksilver \$107,525, and mineral water, \$93,370.

Napa County has the great advantage of river transportation to the bay of San Francisco, passenger and freight steamers making daily trips between Napa and San Francisco.

No irrigation is required to produce any crops.

Its southern boundary reaches down to within twenty-nine miles of San Francisco. The Napa River, a short tidal stream which drains the great Napa Valley, is navigable to the heart of the city of Napa.

There are many large creeks, brooks, and many springs in the hills, both mineral and otherwise.

Since 1910, hundreds of acres of fruit have come into bearing and hundreds of acres have been set out. The plantings are chiefly confined to prunes and pears, which are the chief commercial crops of the county in agriculture. Grapes are the premier crop, there being some 13,000 acres of dry wine grapes in bearing. About two-thirds of the country taxes of the county are said to come out of the vineyards.

Large areas are being cut up and planted to trees, or are being farmed on a more scientific plan—the grain farms *per se*, becoming a thing of the past. Farmers in certain sections are also reviving their interest in sheep and this is bound to improve the farms where they are kept.

Peach orchards are on the decline, but good prune land is being rapidly planted up and few first-class prune orchards in full bearing are for sale. There are some 4,000 acres of non-bearing prunes. A considerable acreage of pears is being planted continuously.

Dairying is on the increase in the county. The Napa State Hospital has recently completed a 200-cow plant, and many silos have been installed by different men the past two or three years. A cow testing association is organized for the purpose of improving the herds.\*

\*W. D. Butler, County Horticultural Commissioner.

## NEVADA COUNTY.

Date of creation, April 25, 1851.

	1890	1900	1910	1915 (estimated)
Land area, 974 square miles.	Population-- 17,369	17,789	14,955	-----
County seat, Nevada City.	Population-- 2,524	3,250	2,689	3,000
Population per square mile, 15.4.				

	Highest	Lowest	Inches	Inches
Elevation, 2,850 feet.	1917: Temperature--- 99	12	Rainfall---25.71	Snow---32.5
	1918: Temperature---101	13	Rainfall---40.70	Snow---17.5

Nevada County is situated in that portion of the state generally known as northern California, although its county seat, Nevada City, is but 76 miles from Sacramento. It is bounded on the north by Sierra County, on the east by the state line between California and Nevada, on the south by Placer County, and on the west by Yuba County. From the Yuba County line, Nevada County is hemmed in by the Yuba and Bear rivers until their sources are reached. The South Yuba River heads in the high Sierras and runs across the county almost its entire length from east to west.

On the rolling foothills of the western portion, where snow and frost are seldom seen, the elevation is slightly above the sea level, while along the eastern boundaries rise the snow-capped peaks of the Sierra Nevada to an elevation of nearly 8,000 feet.

"In its undeveloped state, a large part of the county is adapted to the grazing of cattle and sheep. The National Forests, which cover a considerable portion of the area provide splendid ranges at the higher altitudes during the summer, the cattle being returned to the lowlands for wintering.

A large part of the county is peculiarly adapted to the growing of Bartlett pears, to which the elevation and climate give a flavor and texture second to none. In the Chicago Park section, between Colfax and Grass Valley, both Bartlett pears and Hungarian prunes are grown very successfully without irrigation. This is also true of some other sections. As irrigation water is developed pear growing will see a tremendous expansion.'"

In the southwestern portion of the county, where there is an abundance of water, the farmers are turning their attention to dairying.

In the production of gold, Nevada County has been one of the largest producers, in 1917 being first with the production of \$3,682,947. Some of the mines are working at a depth of upwards of 4,000 feet, and have proven conclusively that in every instance where depth has been attained the ore bodies and the values are equally distributed.

"The Sierra Nevada Mountains pass through the eastern third of the county, making the general slopes eastward to the state of Nevada basin and on the west to the great Sacramento Valley.

The altitude varies from 400 feet on the west to 9,140 feet on the summit of the mountains. All ranges of temperature are to be found, from the heat of the valley to the coolness of the mountain heights.

The industries of the county are gold mining, power, lumbering, paper making, ice making, fruit growing, stock raising, dairying and general farming.

On the eastern slope there is a large area of the primeval forest. It is being extensively lumbered with Hobart Mills as the center. At Floriston is located the largest paper pulp mill in the state. The locality grows a fir in inexhaustible quantities, that is especially adapted for paper making.

Ice along the Truckee River is a large and profitable industry. Truckee is the seat of this ice making industry. Also the well known ice carnival during the winter is held here.

The area of the gold mining zone is large, with Grass Valley, Nevada City and Washington as centers.

The county is well supplied with water for power, municipal and irrigation purposes. Here are located some of the largest reservoirs in the state, notably Lake Spaulding, which is the source of the main hydro-electrical development of the Pacific Gas and Electric Company. But a small portion of the annual run-off has been utilized.

The western slope is especially adapted to the growing of all kinds of fruit, to which great attention is being paid. The acreage of commercial fruit trees is rapidly increasing.

Nevada County took the highest awards for pears at the Panama Exposition in 1915."<sup>†</sup>

**ORANGE COUNTY.**

Date of creation, March 11, 1889.

	1890	1900	1910	1917 (estimated)
Land area, 795 square miles.	Population.. 13,589	19,696	34,436	45,195
County seat, Santa Ana (city).	Population.. 1,456	3,628	8,429	10,981
Population per square mile, 43.3.				

	Highest	Lowest	Inches	Inches
Elevation, 405 feet.	1917: Temperature...112	32	Rainfall... 5.41	Snow... 0
Santa Ana, 133 feet.	1918: Temperature...100	22	Rainfall...12.05	Snow... 0

Orange County is bounded on the north by Los Angeles County, on the east by San Bernardino and Riverside counties, on the south by San Diego County, and on the west by the Pacific Ocean. The Santa Ana River enters the county on the northeast boundary and empties into Newport Bay, furnishing irrigating water to the Anaheim Union Water Company and Santa Ana Valley Irrigating Company. The Santiago Creek furnishes water to and along the foothills east of Orange.

East Newport, Balboa, Newport Beach, and Port Orange are situated on Newport Bay, which is the best shipping point of the county. The county is one of the largest producers of oranges, of which a large acreage has been planted in recent years. There is also a considerable acreage in olives. The first raisin grapevines in southern California were planted in this county by McPherson Bros. in 1872, and the first raisins produced in 1875, but the vines were killed in 1888 by the Anaheim disease.

The county is one of the largest producers of lima beans, and also of sugar beets, the county having no less than five factories, with a total daily slicing capacity of upwards of 3,000 tons. At one time celery was grown on a large scale, but the acreage in the latter is reduced to between 100 and 200 acres in small lots, as growers find that beans and sugar beets pay better. Nearly all green and red chili peppers and pimientos which are packed are grown in Orange County.

**PLACER COUNTY.**

Date of creation, April 25, 1851.

	1890	1900	1910	1917 (estimated)
Land area, 1,395 square miles.	Population.. 15,101	15,786	18,237	20,025
County seat, Auburn (city).	Population.. 1,595	2,050	2,376	2,366
Population per square mile, 13.1.				

	Highest	Lowest	Inches	Inches
Elevation, 1,360 feet. 1917: Temperature...	105	21	Rainfall.. 24.33	Snow.. 2.3
Blue Canyon, 4,695 ft. 1918: Temperature...	93	13	Rainfall.. 48.72	Snow.. 170.0

Placer County is about 100 miles long and of varying widths, from 10 to 30 miles, the course and distance being defined by the course of the rivers which mark its boundaries. It extends from about eight miles from the Sacramento River to the summit of the Sierra Nevada Mountains. Just above Auburn, between the Bear and American rivers, the county is very narrow, being about eight miles across. Above Auburn it widens out into the two divides lying between the Bear River and the Middle Fork of the American River. These are known as the Dutch Flat, or Railroad Divide, and the Forest Hill Divide. The southwestern portion is more regular in shape than the part just described. This section contains the foothill and level agricultural lands.

The entire extent faces toward the west, extending from an altitude of some 40 feet on the plains in the western portion to over 7,000 feet at its eastern boundary line. At the eastern boundary, separating it from the state of Nevada, is Lake Tahoe, one of the most picturesque lakes in America.

The soil of the western, or valley, portion is of the same general alluvial composition as all the soil in the Sacramento Valley, and is well adapted to the growth of grain. The low foothills near Lincoln are excellent for the grape.

Placer County holds a foremost position among the fruit producers. Peaches have been grown for years, and oranges and olives are also produced. In the production of plums, the county ranks above all others, and also produces large crops of pears, cherries, berries and table grapes.

The olive industry is a successful one in this county and both olive oil and pickled olives are produced here.

Dairying and stock and poultry raising are successful industries. Butter making is carried on in the summer, the mountain ranges providing plenty of natural feed for the cattle.

Much sugar and yellow pine, fir, spruce, and cedar are found in the mountains, and the lumber output from that section has been very large for many years. Oak and scrub pine abound all over the foothills and fuel is plentiful.

La Porte 5,000 ft. 1918: Temperature---	87	5	Rainfall---	53.0	Snow.	181.2

Plumas County is situated in the northeastern part of California. It is bounded on the north by Shasta and Lassen counties, on the south by Yuba, Butte and Sierra counties, on the east by Lassen, and on the west by Butte and Tehama counties. In the lowest portion the elevation is about 1,800 feet, but sloping gradually from its valleys, it rises gently to an elevation of its mountain ridges of over 7,000 feet. Although a great deal of valley lands have been cultivated, there is still a large acreage of uncleared land.

Plumas County has the largest area of timber land of any county in California. It is practically one entire sweep of forest land from one end to the other. While the greater part of it has been in reserve, the timber on it has been taken up, and the many sawmills throughout its mountains are turning out thousands of feet of white, sugar pine and spruce lumber.

Running in numerous channels through all of its mountain ridges, the ancient river beds afford large stores of gold. There have been large quantities of gold taken from the mines of Plumas. There has also been a great deal of surface mining done in times past. The mining section of Plumas is scattered throughout the entire county.

Hot Springs Valley, near the northwest corner of the county, contains scores of rumbling springs from which issue steam, or in which hot mud is bubbling, suggesting nearness to an active volcano. To the southwest of this valley are the geyser and a lake of boiling mud.

Riverside County was formed in 1893 from the southwestern part of San Bernardino and the northern part of San Diego counties. It is about 200 miles long by 40 miles wide, and embraces most varied geographical and topographical features, climate, scenery, soil, agricultural, horticultural, and mineral resources. It contains within its borders one of the highest mountains in southern California, Mt. San Jacinto, 10,805 feet high, and part of Salton Sea, 250 feet below sea level.

The central and greater part of the eastern portion of the county is desert, but known to be heavily mineralized. The high cost of freight, fuel, and scarcity of water, making prospecting dangerous, all combine to retard mining developments.

"The principal rivers of the county are the Colorado, which forms its eastern boundary; the Santa Ana, having its head in the San Bernardino Range of mountains, flowing through the northwestern part of the county, furnishing irrigation for a large area of land; the San Jacinto, having its source in the San Jacinto Range, flowing through the San Jacinto, Hemet, and Perris valleys, and forming Lake Elsinore.

The earlier and principal development of Riverside County has been in the northwestern portion. The central and eastern parts of the county are largely desert, though yielding readily to development with the coming of water through storage reservoirs or artesian wells. These sections of Riverside County have large mineral resources which are yet undeveloped on account of inaccessibility and the scarcity of fuel and water.

In the northwestern section of the county is one of the great citrus districts of southern California with Riverside City as its center. Here irrigation systems are highly developed and the land is intensively cultivated.

Adjacent to this district and lying east and south are the Elsinore, Hemet, San Jacinto, Beaumont and Banning districts, where rapid and extensive agricultural development has occurred during recent years. In general these sections are particularly devoted to the production of deciduous fruits and nuts. Here the olive, apricot, peach, apple and almond grow in great luxuriance. With the further development of the resources of water in the San Jacinto mountains it will be possible to bring Perris and Moreno valleys into prominence in the matter of similar productions. These valleys are now chiefly devoted to dry farming. Alfalfa production is an especially flourishing industry of Riverside County, almost all parts of the county where water is available being well adapted to its culture. Poultry farming is also much in evidence, especially in the Arlington neighborhood, where the latest

figures show some 50,000 laying hens producing about 6,000,000 eggs per year.

Further east lies the Coachella Valley, rapidly coming under cultivation as irrigating systems are developed and chiefly noted for the production of dates. This industry, though new, is exceedingly promising, the quality of the product being second to none.

In the extreme eastern part of Riverside County lies the Palo Verde valley, consisting of some 100,000 acres of land lying along the Colorado River. Here the cotton industry has come into prominence in recent years, the 1918 crop amounting to 14,000 bales and worth \$2,500,000.

Temecula, Wildomar, Nuevo and other neighboring localities are noted for their stock raising and the production of seeds in commercial quantities.

Among the industries of Riverside County should be noted the plant of the Riverside Portland Cement Company, one of the largest in the West; the citrus by-product industries of Corona, engaged particularly in the production of citric acid from cull lemons; the Temescal Rock Company's plant at Corona; Alberhill Coal and Clay Company's plant near Elsinore; the Western Products Company's fibre manufacturing plant at Riverside, for converting the yucca plant of the desert into fibre in commercial quantities, and the Riverside plants engaged in the manufacture of packing house machinery.

Riverside County has a large number of health and pleasure resorts. Among these are those in the vicinity of Lake Elsinore, Murrietta Hot Springs, Eden Hot Springs, and Palm Springs, all distinguished for their medicinal properties; the charming resort of Glen Ivy near Corona, Idylwild and Keen Camp in the San Jacinto mountains, and Palm and Andreas canyons.

The Citrus Experiment Station of the University of California, the Indian School at Arlington (Sherman Institute), one of the largest in the country, which is to have a farm school similar to that at Davis, the first appropriation for which was made by the legislature in the spring of 1919, and the March Aviation Field, are all situated in the county.\*

	Highest	Lowest	Inches	Inches
Elevation, 71 feet.	1917: Temperature... 107	26	Rainfall... 8.92	Snow... 0
	1918: Temperature... 107	29	Rainfall... 16.92	Snow... 0

Sacramento County is situated at the southern entrance of the great Sacramento Valley, and is well named the "Heart of California."

Its land area is 983 square miles, is largely comprised of rich sediment or bottom land surrounding the three main rivers, and owing to the enormous yield obtained each year, these sections have proven to be among the richest farming districts in the world.

This county leads the state in the production of pears and asparagus, besides being a large producer of other fruits, such as grapes, peaches, prunes, plums, almonds and olives. Over 35,000 acres are devoted to fruits, vines and nuts. The fruit production and net returns therefrom surpassed all the previous records of Sacramento County during the season of 1918, which netted the growers nearly \$6,000,000 profit. This large production is due, however, to a normal increase in plantings during the last eight years, which has placed Sacramento among the leading fruit producing counties of the state.

Apart from the ideal soil and climatic conditions, so necessary to profitable fruit culture, several other factors have contributed largely to this gradual increase of plantings of this county. Among these are the permanent building of three of the largest fruit and vegetable canneries in the state; three olive pickling plants, five asparagus canneries which handle the enormous 14,000 acre crop.

Again the splendid river transportation handling the bulk of the vast delta fruit output, and last but not least, the transcontinental shipping facilities which enable the grower to get his fruit started to Eastern markets under refrigeration without the slightest loss of time. From sixty to eighty cars of deciduous fruit leave this county each day during the shipping season.

In addition to the enormous fruit industry, there are over 100,000 acres devoted to alfalfa, beans, hops, corn, vegetable and vegetable seed growing, and about 150,000 acres are planted each year to wheat, barley and other cereal crops.

The livestock industry has been gradually increased so that now we have some of the largest and best dairy and swine herds in the state. The large yields of alfalfa and other forage crops, together with the building of several large modern creameries and a condensary have practically trebled this industry during the last three years.

Poultry is also on the increase, especially in the new districts that are being settled, where the farmers are growing large flocks to carry them along until the newly planted orchards come into bearing.

## THE WEALTH OF SACRAMENTO COUNTY.

The wealth of Sacramento County is increasing amazingly, as is indicated by the following statement taken from the records of the County Assessor. In 1910 the total assessed valuation of property in the county was \$58,620,075. In 1918 the total assessed valuation of property was \$104,288,218. This wonderful gain in values is due to the tremendous industrial development in all lines of endeavor and it is not unwise to estimate that the gain in material wealth will be in far greater proportion by the close of the European war, when much of the commerce of the world will be directed through the Panama Canal, thereby adding greatly to the population and development of all California and the Pacific Coast States.

While it must be apparent to the reader that there has been marked activity in the industrial life of Sacramento County and consequent rise in property values, it should be thoroughly understood that there has been no boom here and all values are based upon actual worth. Land in Sacramento County is valued on a basis of what it will produce.

Sacramento County is just a trifle smaller than the state of Rhode Island. There is very little waste land in the county, now that practically all of the overflowed areas have been reclaimed.

The county has an excellent system of good roads. Two main trunk lines of the state highway pass through the county and state roads lead from Sacramento City in five different directions. The Lincoln Highway, the transcontinental road from New York to San Francisco, passes through Sacramento. One hundred twenty miles of new concrete road are under construction at the present time.

The level condition of the county's surface renders motoring ideal. Most of the farmers of the county own motor cars, which they use for business and pleasure.

**SAN BENITO COUNTY.**

Date of creation, February 12, 1874.

		1890	1900	1910	1917 (estimated)
Land area, 1,392 square miles.	Population--	6,412	6,633	8,041	9,068
County seat, Hollister (town).	Population--	1,234	1,315	2,308	2,500
Population per square mile, 5.8.					
	Highest	Lowest	Inches	Inches	
Elevation, 284 feet.	1917: Temperature--103	22	Rainfall-- 9.17	Snow-- 0	
	1918: Temperature--101	23	Rainfall--17.29	Snow-- 0	

The county extends from northwest to southeast about 60 miles, with a general width of 20 miles. The Gabilan Mountains on the southwest constitute the dividing line from Monterey County, and at their base flows northerly, the entire length, the San Benito River. Farther east the Tres Pinos forms another valley.

Irrigation is by gravity from the San Benito River and the Tres Pinos. This is supplemented by an extensive system of pumping from an apparently inexhaustible supply of underground flow, and further by artesian wells in the northern end of the county.

The lime industry, though once large, has ceased, awaiting better transportation facilities. Nearly half the quicksilver produced in the state comes from San Benito County, the New Idria mine being the largest. In 1917 the production of quicksilver in the county amounted to 11,150 flasks valued at \$1,057,770.

Large deposits of potter's clay of superior quality lie in easy access.

San Bernardino is not only the largest county in California, but it is the largest in the United States. It is larger than New Hampshire, Vermont, and Rhode Island combined; larger than New Jersey, Delaware, Massachusetts and Rhode Island combined; very nearly as large as Massachusetts, Connecticut, and New Jersey. There are eight states whose area is less than that of this county.

San Bernardino County is in the southeastern part of the state. The greater portion is desert. In the north is the Mojave desert, and in the east the northern end of the Colorado desert, the arable portion being confined to the southwestern part—the San Bernardino Valley. This valley forms an almost perfect amphitheater, encircled by mountains and hills, open only on the west, allowing the sea breeze from the ocean to sweep its entire length.

Mount San Bernardino, from its distinctive cone, has been adopted by the United States surveyors as the initial point for land surveys in southern California, both base and meridian starting from its peak of 10,100 feet.

The northern and western portions of the county are almost sterile, yet, along the Mojave River, where it debouches from the mountains to the desert, and for many miles, the land on both sides is fertile, easily worked, and produces abundantly as long as the water supply is available.

Here was dug the first irrigation ditch in the state, and here were raised the first crops by irrigation. It is over a hundred years since the mission fathers of San Gabriel established a sub-mission, just west of Redlands, and employed Indian labor to dig what is known as the zanja. This ancient ditch is still in use and within the same banks that were first thrown up by Indian labor almost a century ago.

Almost every variety of fruit can be produced in some part of this county. On the lower levels, all the deciduous fruits are produced. The production of oranges, lemons, and pomeloes is large, these fruits being grown to perfection. The production of oranges has increased rapidly during the last few years, San Bernardino County being the largest producer in the state for many years. There has also been a large increase within the last five years, in alfalfa, and deciduous fruits, but wine grapes are grown to a considerable extent; one of the largest vineyards in the state at Guasti, belonging to the Italian Vineyard Company, contains 3,200 acres of all the best varieties of wine grapes.

In the western part of Rialto, Etiwanda and Cucamonga neighborhoods a considerable quantity of raisins are made.

At Chino is a factory of the American Beet Sugar Company, which is one of the largest beet-sugar factories in the state.

There are but few, if any, sheep in the county, the Census Bureau in 1910 reporting only seven, and the assessor's reports 1910-1915 states that there are none, but in 1916 reports 260; increased in 1918 to 1,200.

The northern and eastern portions are heavily mineralized. The greatest source of potash is in the saline deposits at Searles Lake, where a development plant has been erected, effecting a complete commercial utilization of the vast supply of raw material in sight. The deposits are not only rich in potash, but contain, also, borax, common salt, sodium sulphate, and sodium carbonate. The scarcity of water, which renders the life of the prospector precarious, as well as interfering with the working of the mines, and the scarcity and high cost of fuel, all combined, have limited prospecting and retarded mining development in the past.

	1918: Temperature--- 94	35	Rainfall---11.99	Snow-- 0

"San Diego County occupies the extreme southwestern portion of the state, and has an area slightly larger than Massachusetts. From the ocean to the Jacumba Mountains on the east, which form the natural barrier between this county and the great Imperial Valley, San Diego County is a natural amphitheatre sweeping from the sea through a succession of fertile valleys, rolling foothills and rugged mountains. Its sea coast is 75 miles in length from north to south, and the rocky backbone, better known as the 'back country,' enjoys a distinct increase in altitude from 1,200 to 5,000 feet above sea level.

*Irrigable Lands.*—With the completion, the latter part of 1918, of Lake Hodges and San Dieguito dams, water is being impounded which will eventually put some 15,000 additional acres under irrigation. Much of this land is practically frost free and particularly suitable for winter vegetables. Thousands of acres, as yet uncleared or indifferently cropped to hay and grain, but with water now available, only await the efforts of the intelligent settler to become one of the most productive sections of the state. Approximately 12,500 acres are supplied by other irrigation projects, while private pumping plants supply water for large acreage.

*Co-operative Organizations.*—Within the past five years, the shipment of the muscat, or raisin grape, for table use has been put on a substantial basis by the development of an almost unlimited market in the eastern states. The California Raisin Growers' Association is successfully looking after the raisin end. There are 6,330 acres within the county planted to vines, and the 1918 yield was 10,062 tons of grapes.

The Milk Producers' Association of San Diego County, a co-operative marketing concern, dealing with the distributor only, was formed in the winter of 1917, and has done much to put the dairy business of the county on a firm financial basis. As a result of this work, the wholesale milk supply of San Diego city for 1918 was 63.75 per cent grade 'A' raw. Formerly it was 36.76 per cent. The alfalfa crop for 1918 was 10,000 tons.

The San Diego County Poultry Producers' Association, by buying feed in wholesale lots, putting its members' eggs onto the highest market and by intelligent co-operation all along the line, has done much towards making the county known as one of the most successful poultry sections in the country. Through their egg pool, representing 54,200 hens, they marketed eggs to the value of \$200,690.37. The feed pool, representing 83,400 hens, handled \$198,724.45 worth of feed. San Diego has terminal freight rates, both as to rail and coastwise shipments, and feed can often be laid down on the ranch at wholesale quotations.

A strong Bean Growers' Association, formed primarily to solve marketing problems, is finding many avenues of usefulness to its members. The 1918 acreage planted to beans was 13,000 acres, producing 5,200 tons of beans.

The citrus industry is well organized, and most of the packing houses are members of the California Fruit Growers' Exchange. The plantings to oranges is 1,782 acres, producing 5,375 tons; to lemons, 5,075 acres, producing 15,420 tons of fruit during the 1918 season.

The San Diego Beekeepers' Association is making an intelligent effort to eliminate foul brood and to otherwise put this important industry on a better basis. In April, 1918, there were 34,284 stands of bees and 895 registered beekeepers in the county.

Tomatoes are picked from May 1 until October 15, and, in favored sections of the county as late as January 1, and, occasionally, throughout the year.

In both the coastal and interior belts, vegetable growing and truck farming is being carried on. In portions of this area where frost seldom comes, tomatoes can be ripened as late as January 1, cucumbers can be put on the market in February; and cabbage ready for shipment in January are not uncommon occurrences. String beans and peas prove to be profitable crops throughout the winter, while bell peppers and egg plant are profitably grown until very late in the winter.

This area has also a great opportunity in the growth of the early potato, it being quite possible to mature a spring crop by the first of March and a fall crop during December."\*  
 \*Information supplied by the San Diego Chamber of Commerce.

NOTE.—About half of the eastern part of the county, comprising 4,089 square miles, was organized into Imperial County in 1907.

**SAN FRANCISCO CITY AND COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 46½ square miles.	Population..298,997	342,782	416,912	471,023
County seat, San Francisco.				
Population per square mile, 11,828.				
Water area, 80½ square miles.				

	Highest	Lowest	Inches	Inches
Elevation, 207 feet.	1917: Temperature... 96	34	Rainfall... 9.00	Snow... 0
	1918: Temperature... 85	38	Rainfall... 20.85	Snow... 0

San Francisco is essentially a commercial and manufacturing city. It produces no agricultural products, except to a small extent the minor vegetables. Its location on the bay of San Francisco, one of the finest and safest harbors in the world, eminently fits it for a commercial city, and its importance in this respect insures it a place among the chief shipping centers of the world.

The value of all property has increased enormously in recent years in spite of a temporary setback owing to the terrible double disaster of earthquake and fire in 1906, as the following summary of assessed values will prove:

**GRAND TOTAL OF ALL PROPERTY, 1850-1918.**

1850 -----	\$21,621,184	1912 -----	\$605,141,664
1860 -----	35,967,499	1913 -----	624,182,130
1870 -----	116,375,988	1914 -----	647,456,025
1880 -----	253,520,326	1915 -----	656,877,332
1890 -----	301,438,040	1916 -----	756,235,432
1900 -----	410,425,849	1917 -----	791,957,717
1911 -----	545,398,908	1918 -----	792,251,382

The total county indebtedness in 1918 amounted to \$44,400,100. Space will not allow of even a brief summary of the vast resources and possibilities of this great, rising, and progressive city, but much up-to-date information of value will be found in numerous publications.

**SAN FRANCISCO COUNTY SUMMARY.**

1910	741,916	928,994	6,317	1,031,182	52,041,523	33,276,847
1911	875,184	1,022,481	6,779	1,058,615	57,422,542	42,792,414
1912	1,076,990	1,092,159	7,622	1,231,441	63,545,701	51,735,069
1913	1,022,904	1,137,116	8,330	1,028,046	66,280,516	68,440,109

On account of the reorganization of the customs districts since 1913, Humboldt being consolidated with San Francisco as the northern district, and Los Angeles and San Diego as the southern California district, the above detailed classification can not be continued.

\*To these totals must be added the total imports and exports of gold and silver.

San Francisco and Southern California, 1914-1918.  
(Merchandise.)

Year	San Francisco		Southern California		Total	
	Imports	Exports	Imports	Exports	Imports	Exports
1914	\$67,111,081	\$63,374,909	\$4,908,543	\$2,010,280	\$72,019,624	\$65,385,189
1915	76,068,028	81,500,979	4,716,390	2,512,355	80,784,418	84,013,334
1916	113,645,919	94,558,987	4,175,260	3,268,105	117,821,179	97,827,092

	1918: Temperature	103	26	Rainfall	15.21
				Snow	0
				Snow	0

San Joaquin County lies directly east of San Francisco and San Pablo bays and spans the great interior valley of California from the foothills of the Coast Range to the foothills of the Sierra Nevada Mountains. It thus commands the entrance to the chief port and metropolis of the coast from the continent, and for both water and land traffic; hence it is termed the "Gateway County." The soil varies in character, but the surface is mostly level and well adapted to intensive agriculture. The climate of this area is tempered by sea influences, by the air which rushes through the gap in the Coast Range.

The county is famous for its good roads, built by the county at a cost of \$2,500,000.

Four hundred miles of navigable waterways, three transcontinental railways, three interurban lines, and three hundred and fifty miles of improved highways give San Joaquin County unusually good transportation facilities and make it possible to capitalize fully its advantageous location, directly east of San Francisco. A developed arm of the San Joaquin River penetrates into the center of its county seat, Stockton. The western third of the county embraces the far-famed San Joaquin Delta, reclaimed by levee construction and drainage, land of exceptional productivity. The soils of the county are roughly divided into peats of the delta, the adobes along the river and surrounding Stockton, the deep, mellow loams of the west side, and the great body of sandy loam found in the northern and southern parts of the county. It is estimated that over 40 per cent of the farm area of the county is developed for irrigation by public and private enterprises.

Second in California and twelfth in the United States in the value of all crops, according to census figures, San Joaquin County produces annually about  $13\frac{1}{2}$  per cent on its assessed valuation, this ratio being higher than for any other county in the state. The per capita wealth of its rural districts, \$2,448.74, is greater than that of any other California county. San Joaquin County is first in the production of cereals, vegetables, potatoes, barley, and table grapes; second in hay and forage, oats and rye; third in grapes; fourth in wheat, beans, peas, and bearing almond trees. It is significant to note that all the crops noted are staples. Animal husbandry is fast coming to the front, opportunities in such lines being especially attractive. Sugar beets have become one of the important crops, and sugar factories are near Manteca and Tracy, and another is near Stockton. In the last few years field corn has become one of the biggest and most satisfactory crops.

The great South San Joaquin Irrigation District of 71,050 acres and the new West Side Irrigation District of nearly 12,000 acres are

both within the county. They are owned and operated by the land owners themselves as municipal corporations.

The commerce of the river amounts to about 1,890,000 tons annually, valued at \$50,000,000. Nearly 200,000 passengers are carried on the river each year.\*

	1918: Temperature...104	27	Rainfall...24.82	Snow... 0

This large and fertile county lies on the coast side of the state, about midway between San Francisco and Los Angeles. It is an old county, organized in the days of gold, and received its name nearly a hundred years before the Americans came into the country. It was a great region in the days of the Spanish occupation, and is a great region still in its advantages of soil and climate, of diversified surface and abundant natural resources.

Much grain is still grown. In the eastern portion of the county wheat is still a large product, with an increasing acreage sown to barley.

Fruit is grown successfully in almost all portions of the county, and there are wide areas where fruit of many kinds is a prolific crop. The coast section is especially adapted, nearly every variety doing well.

Paso Robles is the leading town east of the Santa Lucia Mountains, and the second in size in the county, and is pleasantly situated on the Salinas River in a land of oaks and rolling hills. Its chief features are the hot springs. The great hot springs flow approximately 2,000,000 gallons per day, and there are several other springs of varying chemical constituents and adapted to wide medicinal uses.

The producing oil wells of San Luis Obispo County demonstrate the fact that the Monterey shale, found over the greater portion of the coast side of the county, is an extension of those of the great Santa Maria oil fields immediately adjoining the county on the south. Port San Luis, which is the terminus of three pipe lines from the Santa Maria fields, is one of the largest oil ports. The well-known Coalinga, Kern River, Midway, Sunset, and McKittrick fields are also connected by pipe line with this port.

**SAN MATEO COUNTY.**

Date of creation, April 19, 1856.

	1890	1900	1910	1917 (estimated)
Land area, 447 square miles.				
County seat, Redwood (city).	Population-- 10,087	12,094	26,585	37,162
Population per square mile, 59.5.	Population-- 1,572	1,653	2,442	3,500
Elevation, 22 feet. (No observation station in county.)				

San Mateo County is that part of the San Francisco peninsula lying between San Francisco County on the north and Santa Clara and Santa Cruz counties on the south. This county is divided lengthwise by the Santa Morena ridge of mountains, forming the backbone of the peninsula. The mountain ridge is the fertile and picturesque watershed of a region peculiarly adapted for homes of beauty and comfort on its eastern slope. Along the bay shore are many miles of deep water, and spur tracks to this deep water are now under construction, thereby opening up vast possibilities to manufacturers who desire cheap sites with excellent shipping facilities.

On the west the descent to the Pacific is quick and abrupt into a region occupied by farmers, dairymen, stock raisers, and lumbermen. The whole ridge is anywhere accessible, and all more or less covered with oak and redwood.

Climatic and scenic surroundings, shipping facilities, proximity to the metropolis of the Pacific Coast, are all favorable conditions working toward the prosperity of this county.

"San Mateo County is the home of the artichoke and brussels sprouts, the rolling hill country of its western shore showing thousands of acres under cultivation for these vegetables, the market for which extends from the Pacific to the Atlantic. All sorts of vegetables thrive in San Mateo County, the northern end seemingly being particularly adapted for their cultivation. The cultivation of flowers, both in the open and under glass, is a large and profitable industry. Seventy-five per cent of the flowers sold in San Francisco's world-famed street marts are produced in San Mateo County. The violet beds of San Mateo, some of which are acres in extent, have long been a lure for tourists.

On the east shore or bay side of San Mateo County deep water has brought the county an extensive industrial development, particularly at South San Francisco and Redwood City, where harbors and manufacturing centers have been developed, some of the largest plants on the coast being located at these points.

The wondrous scenic attractions of the county have been capitalized by the people through the expenditure of nearly one and one-half million dollars in the construction of a magnificent highway system radiating from El Camino Real, the state highway, which passes through the county and joins the paved streets of San Francisco at the county line. The construction of these roads has brought an unprecedented growth to the county, evidenced by the beautiful homes built and now under course of construction in what were formerly inaccessible spots."\*

	1918: Temperature---	93	31	Rainfall---	28.85
				Snow--	0
				Snow--	0

Santa Barbara County is situated in the parallelogram formed by the break in the coast line made by Point Concepcion, the great continental headland. From this point, the coast line extends for about fifty miles in each direction. The Coast Range of mountains divides the county into five natural divisions.

The largest of these divisions is the Santa Maria Valley occupying the northern and western portion of the county. This valley contains about 160,000 acres, 80 per cent of which is under cultivation. The Santa Maria River is the chief stream, furnishing water for irrigation purposes in the upper valley and replenishing the underground flow nearer the ocean. The soil is mostly a light sandy loam, noted for its great depth and fertility. It is especially adapted to the growing of beans, beets, potatoes, and onions. The Union Sugar Company maintains a large factory at Betteravia, where upwards of 100,000 tons of beets are made into sugar.

South of the Santa Maria Valley, and parallel to it, is the Los Alamos Valley. Most of the cultivated land is planted to beans, the higher lands being devoted to the growing of grain.

The Lompoc Valley, extending along the Santa Ynez River from the ocean eastward, lies parallel to the Los Alamos Valley. While not as wide as the Santa Maria Valley, its length is greater. The lower portion of the valley resembles the Santa Maria, the products and soil being very similar. Beans, beets, potatoes, and mustard head the list. The valley is noted also for the fine quality of apples and cherries. In the upper part of the valley, beans, barley, and alfalfa are the leading crops. Irrigation water can be had in abundance from the Santa Ynez River.

The Santa Barbara Valley, varying in width from one-half to four miles and extending from Point Concepcion to the Ventura County line, is a coastal plain, traversed by many mountain streams. The soil laid down by these streams is characterized by great depth and fertility. The high mountains to the north afford protection from strong winds while the proximity to the ocean greatly moderates the temperature. Near the ocean, the broad flat bottom lands are devoted to the production of lima beans, while the lands farther back are planted to orchards. Lemons, walnuts, olives and other fruits flourish. Water is obtained for irrigation from the mountain streams and through artesian wells. Many of the canyons are free from frost and are especially adapted to the growth of semi-tropical fruits, the avocado and cherimoya heading the list.

The Cuyama Valley lies in the extreme northern and eastern part of the county. As yet this valley is largely undeveloped, but it affords many possibilities to the prospective settler.

Plans are now on foot by which a permanent highway will pass through this valley, connecting the cities of the San Joaquin Valley with those of the coast.

The Santa Barbara Islands lie off the coast, about thirty miles southward. They are devoted principally to the production of cattle and sheep.

A considerable portion of Santa Barbara County is made up of rolling hills, wooded with oak timber. The land is ideal for grazing purposes and furnishes feed for large numbers of cattle, horses and hogs. The latter feed extensively on acorns. Bur clover, alfalfa, and wild oats are the natural forage crops.

In 1918 there was produced approximately 1,000,000 sacks of beans, 125,000 sacks of potatoes, 12,000 tons of lemons, and 2,200 tons of walnuts.

The petroleum oil fields in this county are very rich, the Santa Maria Fields producing about 4,000,000 barrels in 1917. The potash industry is being developed along the coast line. Due to the influence of the islands off the coast, the water is very quiet and large beds of giant seaweed or kelp are found. This kelp is cut by large harvesters, dried, burned, and the residue is found to contain a high percentage of potash. The Santa Barbara Channel is also noted for its fisheries. Many species of fish are taken here and are found only in the waters of this channel.

"The city of Santa Barbara is famed the world over for its evenness of climate and wealth of scenery. Proximity from the mountains to the sea affords outdoor sports to many tourists and other people who have made this city their home. Direct transportation by highway, rail, and water connects this city with leading cities of the Pacific Coast."\*

	1918: Temperature--- 95	27	Rainfall---18.28	Snow-- 0

Santa Clara County is situated to the south of San Francisco Bay, and is separated from the Pacific Ocean by San Mateo and Santa Cruz counties. The county seat is San Jose, and is distant 50 miles from San Francisco. The county is 47 miles wide from north to south, and through the center runs the favored Santa Clara Valley, with an average width of 15 miles, which is one of the most fertile valleys in the state. The county from the valley slopes upward through rolling hills to the summit of the Santa Cruz Mountains on the west. The county is famous for its large fruit production, especially of prunes, and embracing cherries, apricots, plums, pears, peaches, apples, and all kinds of deciduous fruits; there are 30 large fruit and vegetable canneries in the county and nearly as many packing houses. San Jose is the headquarters of the California Prune and Apricot Growers, Inc. For a number of years Turkish tobacco of fine quality has been grown in the county, and the acreage is being increased. Tomatoes are grown extensively for the canneries.

The county has 1,200 miles of roads, of which 144 miles are paved, and 650 miles are excellent roads of various types, and more than 400 miles are sprinkled during the summer.

Educational interests are represented by the Leland Stanford Junior University, University of Santa Clara, the State Normal School, the College of the Pacific, the College of Notre Dame, and several high schools.

The valley is drained by a number of streams. In summer their watercourses greatly diminish and smaller ones wholly disappear; having their sources in the surrounding hills and sinking as they approach the valley, they augment the subterranean supply of the artesian wells.

	1890	1900	1910	1917 (estimated)
Land area, 435 square miles.	Population--	19,270	21,512	26,140
County seat, Santa Cruz (city).	Population--	5,596	5,659	11,146
Population per square mile, 60.1.				15,150

	Highest	Lowest	Inches	Inches
Elevation, 20 feet.	1917: Temperature---101	24	Rainfall---12.37	Snow-- 0
	1918: Temperature--- 95	28	Rainfall---22.84	Snow-- 0

Santa Cruz fronts its entire length on the Pacific Ocean. It is separated from San Mateo and Santa Clara counties by the Santa Cruz Mountains, and from Monterey County by the Pajaro River. It is one of the smallest counties, and comprises a narrow strip of mountainous land about 40 miles long and 18 miles broad, forming a vast amphitheater, and sloping from the summits of the Santa Cruz range, whose highest elevation, Loma Prieta, is 3,793 feet, southward and westward to the bay of Monterey.

The curving line of shore and the corresponding curve of the mountain line inclose an irregular, crescent-shaped tract of country, with an average width of 20 miles. The sides of the mountain are closely set with forests of pine, redwood, madrone, and other trees, the redwoods having in many cases, attained gigantic growth.

The extent of the apple industry which is the principal fruit raised, is shown by statistics, and is one of the most valuable industries. During the harvesting of the crop in the Pajaro Valley, this industry gives employment to several thousands. The leading varieties are the Newtown Pippin and Bellflower; also Red Pearmain, White Pearmain, Missouri Pippin, Baldwin, Rome Beauty, Spitzenberg, Winesap, Langford Seedling, and Ben Davis.

An average apple crop amounts to about 3,600 cars, represented as follows: Newtown Pippins, 2,100; Bellflowers, 900, and other varieties, 600 cars. An ordinary car is 640 boxes.\*

Of the small fruits, the strawberry is the most widely grown and furnishes a crop from about April 1 to December 1.

In the southern part of the county a large acreage is devoted to the profitable growth of sugar beets, potatoes, beans, and onions.

Asparagus and rhubarb are grown for outside markets.

Seeds, bulbs, plants, and cut flowers are cultivated on a large scale.

The Santa Cruz Portland cement plant has the largest capacity for the manufacture of cement of any in the state.

There is a cold storage plant at Watsonville with a capacity of 500 carloads.

The fish hatchery at Brookdale, on Clear Creek, which was established in 1905, produces large quantities of steelhead trout and also of quinnat salmon and silver salmon.

\*For further details regarding apples, see page 160.

1918: Temperature...111	27	Rainfall...30.76	Snow... T	

Shasta County lies at the head of the famous Sacramento Valley. One mile north of Redding, the county seat, the valley ends and the canyon, second only in fame to the valley, which bears the name of the great waterway in the state, begins.

Covering a portion of eastern Shasta are the Sierra Nevada Mountains and on the northeastern boundary is the Coast Range. These are lofty, some peaks exceeding 5,000 feet in height, and are very rugged. On the extreme eastern border of the county is Lassen Peak, raising its mighty head 10,437 feet above sea level. This peak has attracted much attention in recent years owing to numerous great eruptions. This mountain is timbered two-thirds of the way up. Hot and boiling springs and others noted for their medicinal qualities, abound in this region. The southwestern portion of this section is a succession of rounded hills, varying in height from 50 to 200 feet, while the central and southern portions consist of tablelands, varying in altitude from 500 to 700 feet. Fertile valleys predominate.

Shasta is noted for the number and beauty of its streams. First in importance is the Sacramento River, which enters the county on its northern boundary, traversing it throughout to its southern borders. The Sacramento is augmented by the combined McCloud, Pit, and Fall rivers, the former finding its source at Mount Shasta on the extreme north, enters the county and travels in a southerly direction, emptying into the Pit, which earlier has received the Fall River flow, and continuing still in a southerly course meets and enters the Sacramento at a point a few miles north of Kennett. Most beautiful of all northern streams is the Fall River.

Beautiful resorts and springs abound. The mountains are heavily timbered with sugar pine, cedar, fir, and other valuable timbers.

While dry farming is carried on successfully irrigation is being inaugurated in different sections of the county. An irrigation system to irrigate about 50,000 acres, under what is known as the Anderson-Cottonwood Irrigation District, has been made. A small quantity of cotton was planted on the Rancho Buena Ventura at Cottonwood in 1918, as an experiment, but the rains came before it was matured.

The prune, peach, pear, and plum thrive, while grapes have proved a success in the valley districts.

Anderson, twelve miles south of Redding, is the leading fruit district and also the lumber center of the county, and Kennett, seventeen miles to the north of the county seat, are the two next important centers.

Shasta's pre-eminence in mineral production is largely due to her immense copper output, which in 1916 amounted to 39,437,000 pounds, valued at \$9,701,000.

**SIERRA COUNTY.**

Date of creation, April 16, 1852.

Date of creation, April 16, 1882.					
Land area, 923 square miles.	Population-----	1890	1900	1910	
County seat, Downieville (township).	Population-----	5,051	4,017	4,098	
Population per square mile, 4.4.			751		
	Highest	Lowest	Inches	Inches	
Elevation, 3,150 feet.	1917: Temperature---	99	11	Rainfall---	46.40
	1918: Temperature---	104	16	Rainfall---	55.72
				Snow---	25.2

Sierra County has an area practically all mountainous. The altitude ranges from 2,000 to 8,600 feet, the highest elevation being that of the Sierra Buttes, but the greater portion has an elevation of from 4,000 to 5,000 feet.

The main ridge of the Sierra Nevada crosses the eastern part from south to north. Several spurs traverse the county from east to west, forming the watersheds of the four principal streams which make the drainage system of the western part. These streams consist of the Middle Yuba River on the south, the North Yuba near the center, and Canyon Creek and Slate Creek on the north, and in the eastern end the many streams that form the headwaters of the Feather and Truckee rivers. Of the peculiar topographical features are the expansive valleys and lakes, lying among the loftiest peaks of the Sierras. The lakes vary from one-eighth of a mile to three or four miles in length, most of them circular, and, considering their small size, are remarkable for their depth.

The important body of agricultural land is Sierra Valley. It extends over the boundary line into Plumas County, and is the largest and the most elevated of the valley of the Sierra, being 4,750 feet above sea level. It is 30 miles in length and 10 miles in width. This valley is particularly adapted to stock raising and dairy purposes. There are several creameries in the valley. The soil is deep, black loam, largely admixed with rich mold.

The greater portion is practically covered with a virgin belt of soft timber. The lumber cut runs into many millions of feet, and the cut over timber land is gradually passing into the hands of stock men for grazing purposes.

Since 1849, the principal industry has been gold mining.

Yreka, 2,625 feet.	1917: Temperature...	105	-3	Rainfall...33.06	Snow...25.5
	1918: Temperature...	102	6	Rainfall...14.13	Snow... 0.6

Siskiyou is one of the northern counties of the state, adjoining Oregon for 80 miles on the north. Of its area of 6,256 square miles, 1,500 square miles are valley; the remainder is mountains and forest. Much of the agricultural land is farmed without irrigation, producing good crops of wheat, barley, and in some localities alfalfa and timothy. The so-called desert lands were long considered of little value save for pasturage, but are now being successfully farmed, and require only the application of water to produce abundant crops.

The agricultural lands are chiefly comprised in Scott Valley in the western portion of the county, Shasta Valley and Little Shasta in the central portion, and McCloud and Butte valleys in the eastern portion.

Timber is everywhere; there are thousands of sections that will cut from ten to twenty million feet of yellow and sugar pine, besides large quantities of red fir and cedar.

The Sierra Nevada and Coast Range mountains meet here. The altitude ranges from 2,000 feet in the valleys to 14,000 feet on the mountain peaks, the highest of these being Mount Shasta. There are localities where snow seldom falls, and regions of perpetual snow. These conditions make it one of the most scenic of the counties.

The Marble Mountains, now but little known to tourists, will in time rival the Kings River Canyon and the Yosemite Valley. Chief among the noted resorts are the famous Shasta Springs and Upper Soda Springs, all situated in the Sacramento River Canyon, just over the border of Shasta County. At Sisson, at the base of Mount Shasta, the largest fish hatchery in the United States is located.

Lumbering is the chief industry, with mining and live stock a close second and third. The total assessed value of all property in 1918 was \$19,764,455. The coal deposits north of Yreka, in the vicinity of Hornbrook and Ager, have furnished a small amount of coal for domestic use for several years. It is a good grade of lignite, burns freely and leaves no clinkers.

Vacaville (Station):	Highest	Lowest	Inches	Inches
Elevation, 175 feet.	1917: Temperature.....	-----	Rainfall.....	Snow.....
	1918: Station discontinued.			

Solano County is about thirty miles north of San Francisco, the great bay system forming its southern boundary. The Sacramento River forms the eastern line, and these bodies of water have created a great acreage, originally swamp land, but with reclamation, capable of producing prodigious crops. There are several delta islands within the county lines. On the west, the county extends into the foothills of the Coast Range, where several warm, sheltered valleys, with rich soil, are the home of the choicest deciduous fruits. In addition, there are sections of plain and rolling land, where cereals are produced and live stock raised in large numbers. The county has 526,000 acres of land, and is small in area, as compared with other counties, but is a leader in material products. In the number and production of bearing pear trees, it stands first in the state, in plums and prunes and in apricots, second; in cherries, third; and in peaches, sixth. There is also a considerable acreage in grapes. The Federal census of 1910 places the annual fruit and nut production at \$1,495,000 and of all crops at \$3,569,000.

Manufacturing and industries are a source of great wealth. At Vallejo, the largest city, is the Mare Island Navy Yard. The Sperry flour mills, just completed, are the most modern in the state. Benicia has the United States Arsenal, a great iron working plant; two ship yards, several tanneries, and other industries. Dixon is the center of a splendid dairy section, and Vacaville and Suisun are the shipping points for green and dried fruits. Rio Vista is the main shipping point on the Sacramento River in the county, and is a prosperous community.

Transportation facilities are excellent. The Southern Pacific main line traverses the county, with two branch lines. There are three electric lines in the different sections of the county, while freight and passenger service by water is accessible to nearly every portion of the county effectively regulating charges for freight, and affording splendid accommodations for passengers.

The school facilities are in keeping with the wealth and prosperity of the county. There are six fully equipped high schools, and a complete elementary system, with several private schools of equal merit. Every inducement for home seekers is offered by the county. The warmth of summer is tempered by sea breezes coming from the bays, and severe frosts are very seldom known.

There are several mineral springs with commercial outputs, and one producing quicksilver mine.

**SONOMA COUNTY.**

(Census 1910.)

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 1,577 square miles.	Population-- 32,721	38,480	48,394	55,630
County seat, Santa Rosa (city).	Population-- 5,220	6,673	7,817	11,000
Population per square mile, 30.7.				

	Highest	Lowest	Inches	Inches
Elevation, 181 feet.	1917: Temperature---111	23	Rainfall---15.49	Snow-- 0
	1918: Temperature---100	20	Rainfall---24.21	Snow-- 0

Sonoma County is bounded on the west by the Pacific Ocean, for more than 65 miles that boundary conforming to the irregularities of the shore, while on San Pablo Bay it has a frontage of 20 miles.

The great central valley extends the entire length of the county from south to north. The area on which rough stone interferes with farming operations is small. Out of the area of land in the county at least 200,000 acres are valley land, the richest soil known, being a black loam; 200,000 acres are rolling, or higher tableland, of exceedingly rich, alluvial, brown soil, with considerable sand. This is the best fruit land. At least 100,000 acres of mountain land are adapted to grazing, and about 80,000 acres are covered with redwood timber of a magnificent growth.

Sonoma Valley is about 20 miles in length, with an average width of 8 miles. It lies parallel to Petaluma Valley, from which it is separated by a range of mountains.

The streams and watercourses of Sonoma County are numerous. Russian River, the largest stream, enters on the north, flows in a south-easterly direction for 20 miles, turns at Fitch Mountain and finds its way to the largest depression in the Santa Rosa Basin, from which it breaks through a gap in the Coast Range to the Pacific Ocean. This river gathers the waters from three-fifths of the area of the county. Owing to the abundant rainfall little or no irrigation is required, as is the case in some of the valley counties.

"Sonoma County leads the state in the production of poultry and eggs, berries, and dry wines. It stands second in apples, prunes, and hop production, and has extensive dairy, stock, sheep, and general farming interests.

Poultry and egg production make up the largest single interest in the county. In recent years the five million hens in the county have returned to their owners an average of about fifteen million dollars per year.

Although national prohibition will injure the wine grape interests, the vineyards are still being cared for in the hope that some outlet will be developed for the crops produced.

The berry business has developed as a companion interest to the apples, the berries being grown between the rows of young trees. Loganberries and blackberries are the chief varieties. The berries are shipped fresh to Eastern markets and to California canneries. A large loganberry juice industry is now being developed.

	1918: Temperature---106	21	Rainfall---16.02	Snow-- 0

Stanislaus County lies in the northern end of the great San Joaquin Valley, 114 miles from San Francisco and 30 miles from tidewater on the San Joaquin River. It is bounded by the Sierra Nevada Mountains on the east and the Coast Range Mountains on the west. The county is drained by three large rivers, the Stanislaus, the Tuolumne, and the San Joaquin. The soil ranges from a light sandy loam in the southerly part to a heavy sandy loam in the central part and adobe and redlands in the east. The county is crossed by four lines of railways, while the Sierra Road connects Oakdale and vicinity with the mountain counties to the north.

The county has a large acreage in barley, oats and wheat, and is the largest producer of butter in the state, the total quantity in 1918 being 8,023,788 pounds. Fruits also grow well, especially peaches, apricots, and figs.

**SUTTER COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 608 square miles.	Population.. 5,469	5,886	6,328	6,650
County seat, Yuba City (town).	Population.. -----	-----	1,160	1,700

Population per square mile, 10.4.

Elevation, 57 feet. (No observation station in county. Figures practically the same as for Marysville, Yuba County, which adjoins.)

Almost in the center of the far-famed valley of the Sacramento is located the county of Sutter, the larger portion of which lies between the Sacramento and Feather rivers directly at their confluence. The remaining portion of the county lies east of the Feather River, just south of Bear River. Surrounded by rivers on almost every side, it is evident that the soil of the county is largely river made, the wash of a thousand years from the Sierra Nevada and Coast Range mountains, and is deep and fertile, the equal of any in the whole state of California.

The western portion of Sutter County in particular is being rapidly developed. The large land holdings are being cut up and sold out in small tracts. Meridian is a prosperous little town, located in the western portion of the county, as well as Live Oak, in the northern part, and Nicolaus in the southern division.

The county has a large acreage in beans, much of the land in the Sutter basin being devoted to this crop.

The dairy industry is thriving, and there are a number of large creameries.

Sutter County is the home of the Thompson seedless grape, which is being grown so extensively in various valleys of the state. Most other fruits are grown with great success, especially cling peaches, the production having increased from about 9,700 tons in 1915, to 17,000 tons in 1917.

## TEHAMA COUNTY.

Date of creation, April 9, 1856.

	1890	1900	1910	1917 (estimated)
Land area, 2,893 square miles.	Population-- 9,916	10,996	11,401	11,697
County seat, Red Bluff (city).	Population-- 2,608	2,750	3,530	5,072
Population per square mile, 3.9.				

	Highest	Lowest	Inches	Inches
Elevation, 307 feet.	1917: Temperature---110	24	Rainfall---14.16	Snow-- 0
	1918: Temperature---112	26	Rainfall---23.57	Snow-- 0

*“General Description.* Tehama County occupies the upper or northern portion of the Sacramento Valley. It is 200 miles north of San Francisco and 120 miles north of Sacramento. Part of its eastern boundary follows the summit of the Sierra Nevada Mountains, and its western boundary lies along the summit of the Coast Range. Its greatest length from east to west is 78 miles; its width from north to south, 38 miles.

The Sacramento River is navigable to Red Bluff and steamboats from San Francisco and Sacramento make trips up and down most of the year. The Sacramento River runs through the county from north to south. From this river there is a rise to the east and west until the summit of the mountain range is reached. South of Red Bluff and west of the river lie broad plains, beyond this, rolling hills developing into the foothills of the mountains, and then the mountains themselves, which rise quite abruptly to a height of from 3,000 to 9,000 feet.

*Irrigation.* Irrigation of the lands in the county is a very important factor in the production of crops, water being pumped from the river, creeks and wells. In the Los Molinos Colony a good-sized gravity system of irrigation is now completed, the water being taken from Mill Creek, by the construction of a dam, and from the same stream there are several other diversions irrigating several thousand acres. From Deer Creek they are irrigating many thousand acres including the Leland Stanford Jr. University Ranch at Vina, Cal. From Antelope Creek water is diverted for use of the city of Red Bluff and for the irrigation of the Cone Ranch and a portion of Los Molinos Colony.

*Industries.* The principal industries are horticulture, agriculture, stock raising and lumbering. Mining of chrome ore in the western part of the county has become of considerable importance in the building up of the community, and more mines are being opened now on account of the great demand for chrome, caused by the war.

*Olives.* The growing of olives in the county has developed into an industry that will make the county famous as a producer of fine olives and olive oil. Two plants for pickling olives are now in operation at Corning, and we have over 500 acres of bearing trees.

*Alfalfa.* In Agriculture there has been a gradual change from the growing of wheat and other grains, to fruits, alfalfa, etc. Alfalfa, also grain hay, is grown in quantities to feed the stock and supply the demand of the Alfalfa Meal Company, where large quantities of alfalfa are ground into meal and shipped to all parts of the world.

*Apples.* Apples are grown only in the foothills. The chief apple-producing region of the county is at Manton, 35 miles to the northeast of Red Bluff, where very fine fruit is raised.

Berries and all small fruits do well. They come into the market early and sell readily.

*Sheep.* Tehama County is one of the principal counties in northern California, if not in the state, in the production of wool and mutton. The favored breeds of sheep are the various types of the Merino for wool, Shropshires and Hampshires for mutton. For both purposes crosses of Lincolns, Cotswolds and Corriedales are bred to a great extent.

*Goats.* Of late years Angora goats have come into greater favor as they thrive on the brushy hillside, and their wool is in great demand and brings good prices.

*Hogs.* Hog-raising in Tehama County offers wonderful opportunities. This part of our stock-raising industry has kept pace with our general development, and has shown an increase from 10 to 15 per cent since 1910.

*Bees.* Bee keeping is steadily increasing in the alfalfa section of the county, and shows a 43 per cent increase in the last five years.

*Cattle.* There is in Tehama County some of the finest cattle in the state, and the largest cattle company in northern California operates from the county seat. There are some 30,000 head of fine beef and dairy cattle, and one of the finest Holstein dairy herds in the world is being developed and for years has been considered the home of fine Holsteins. This herd is located at the Leland Stanford Jr. University Ranch at Vina.

Faith in Tehama County peaches and prunes grows every year, there being 700 acres of nonbearing peaches and 1,000 acres of young prunes.\*

#### TEHAMA COUNTY SUMMARY.

(Census 1910.)

Number of Farms Classified by Size.			
Under 3 acres.....	7	Implements and machinery in 1910....	\$494,932

## TRINITY COUNTY.

Date of creation, February 18, 1850.

		1890	1900	1910	
Land area, 3,166 square miles.	Population-----	3,719	4,383	3,301	
County seat, Weaverville (township).	Population-----	768	968	674	
Population per square mile, 1.0.					
	Highest	Lowest	Inches	Inches	
Elevation, 2,162 feet.	1917: Temperature-----	107	5	Rainfall-----24.82	Snow-----24.0
	1918: Temperature-----	107	9	Rainfall-----25.63	Snow----- 0

Trinity County is situated in the Coast Range of mountains and is well drained by the Trinity, Mad, Eel, and Van Duzen rivers, and is well watered by the numerous creeks that carry streams of water from the mountain snows to the rivers and their tributaries. The higher mountain ranges, being covered with snow during the winter season, give ample supply for irrigation, and also provide an abundance of pasturage on the mountains. Trinity is bounded on the north by Siskiyou, on the east by Shasta and Tehama, on the south by Mendocino, and on the west by Humboldt County, thus being on the great mineral belt of the northwestern part of the state. Mining for gold has been the principal industry for fifty years. Hydraulic, placer, drift placer, dredge, and quartz mining have produced profitable results. In 1917 the production of gold was valued at \$602,048. Many other valuable minerals have been found, but owing to the lack of cheap transportation facilities, none of them has been developed to any extent. With an abundance of sugar pine, yellow pine, and fir timber ready for the market, the lumbering interests will be extensive as soon as railroad transportation is provided.

Lemon Cove, 600 feet. 1918: Temperature... 108	27	Rainfall... 13.60	Snow... 0	

Tulare County is one of the largest counties of the great San Joaquin Valley. The valley sweeps southward 250 miles to where the Tehachapi Mountains intersect with the Sierra and Coast ranges, forming the line between the so-called northern and southern California.

About one-half of the county is mountainous. Its eastern boundary, commencing at the crest of the Sierras, embraces Mount Whitney, whose hoary head reaches an altitude of 14,522 feet and is the highest summit in the United States. Out of these mountains flow many streams that furnish water to irrigate the level and fertile acres.

Wheat and small grains are grown without irrigation. Tulare County was at one time the banner wheat county, some individuals sowing five, ten, and twenty thousand acres, but farming on that scale is rapidly passing away. Still there are many thousand acres sown to wheat annually.

The principal agricultural products of Tulare County are wheat, barley, alfalfa, Egyptian corn and beans.

Tulare County produces large quantities of peaches and prunes, also pears, apricots, apples, olives, figs, plums, almonds, walnuts, raisins, table and wine grapes, oranges, lemons, and berries of all kinds. The citrus orchards in the districts around Exeter, Porterville, and Lindsay are the largest and most successful in northern California. The price received for navels in 1917 was higher than any previous year. About 2,200,000 boxes of citrus fruits were shipped, but the crop being fifty per cent of normal. The prices for navels was abnormally high. The planting of citrus fruits in 1918 was very light.

Some of the largest raisin vineyards are to be found in Tulare County. The Muscat, Sultana, and Thompson's Seedless are the principal varieties grown. In the vicinity of Dinuba, Orosi, and Sultana this industry is especially flourishing.

About 50 miles northeast of Visalia lies the Sequoia National Park, a reservation by the government of the largest forest of *Sequoia gigantea* trees in existence. The reservation contains about 250 square miles. There are more than 3,000 sequoias in this forest that measure over 45 feet in circumference and 300 feet in height. The General Sherman in this forest is said to be the largest living tree in the United States. Over 100 feet from its base it is 80 feet in circumference.

"The sugar beet factory has been dismantled, not because the beets would not grow successfully, but because they seldom yielded any profit to the grower.

Avocados are gradually being introduced, between 400 and 500 trees are now growing in the county, nearly one-half of which were planted last season.

About 800 acres of cotton were planted in 1918, 600 of which was on the Tagus ranch. Two or three acres of tobacco were grown quite successfully near Yettem."\*

NOTE.—In 1899, 96 square miles were transferred to Kings County.

	1918: Station discontinued.			

Tuolumne County is in central California. The eastern portion extends into the western slope of the Sierra Nevada range. The entire surface is of a rugged character, with many small and fertile valleys and meadows, and sloping hills heavily covered with timber.

The main rivers are the Stanislaus and Tuolumne, tributaries of the San Joaquin. The Tuolumne has its source entirely within the limits of the county, and may be termed the river of a thousand lakelets, although a number of these strictly come under the head of lakes. The main or principal branch of the river flows through the Hetch Hetchy Valley. The Stanislaus River, to the north, with one of its branches, forms the boundary line of this county and Calaveras.

In many places the soil is well adapted to fruit growing.

Stock raising is controlled mostly by feed—by those who have ranges in the mountains for summer and pasturage in the foothills for winter. In the mountains in certain sections there are meadows upon which grows the finest kind of bunch grass, while upon the hillsides wild oats and timothy afford a splendid feed.

"Tuolumne County is located near the center of the state, due east from San Francisco, a distance of 90 miles in an air line, at an altitude, above sea level, ranging from 500 feet in the west to 12,000 feet in the east, the average altitude in the populated portion of the county being about 2,000 feet.

The famous 'Mother Lode' series of gold-bearing veins traverses the western portion of the county for a distance of 23 miles, giving employment to hundreds of men who wrest from its depth more than \$1,000,000 annually.

The county is also traversed by a system of ancient river channels, containing gold-bearing gravels, which have been covered and filled up with a deposit of volcanic origin. Notably among these is the Table Mountain Channel, which is, at present, being mined at many different points.

West of the Mother Lode there is quite a copper deposit, which awaits development to demonstrate its commercial value and possibilities.

In the vicinity of Columbia are immense deposits of marble. Three miles northwest of Columbia, the marble is being quarried extensively by the Columbia Marble Company. It is one of the largest marble quarries in the state. On the eastern outskirts of Columbia, another quarry is being opened up and operated by the Bell Marble Company.

Limestone is also being quarried at Shaws Flat, Browns Flat, and at a point one mile south of Sonora. South of Sonora the limestone is calcined in kilns, and a superior quality of lime is produced. The supply of limestone is practically inexhaustible.

Tuolumne County has also an extensive lumber industry. One company holds 55,000 acres of white pine, sugar pine, fir and cedar, and another holds 40,000 acres of white pine, sugar pine, fir and cedar. Together they cut annually about 80 million feet. This industry gives employment to about 2,000 men and is one of the principal sources of revenue to the county.

Although the fruit industry is young, its commercial possibilities have been established.

Besides apples other fruits are grown equally as successfully, among them being pears, peaches, grapes, plums, etc.

Vegetable gardens, with almost every known vegetable, are in evidence in every community and commercially have proven a great success.

In Tuolumne County another important industry is that of stock or cattle raising, the cattlemen being among the wealthiest citizens. Here every opportunity and advantage presents itself, there being abundance of range, feed and water. During the winter months the cattle graze in the foothill ranges and in the summer they are driven to the mountains, where they pasture and grow fat in the rich meadows and hillsides of the mountains within the forest reservation. They are shipped direct, by rail, from Sonora to market in earloads.

For irrigation and development of power there is an abundant supply of water, for Tuolumne County embraces the larger portions of the watersheds of the Stanislaus and Tuolumne rivers—the principal tributaries of the San Joaquin River. In fact, it is from this county that the city of San Francisco expects, in the future, to obtain its water supply, and active operations are in progress for that purpose.

The hydroelectric plant of the Sierra and San Francisco Power Company, located here, furnishes electricity to the city of San Francisco and many of the mines in this county.

The splendid system of state highways extends into this county, the construction work being already completed as far as Sonora, the county seat.

The county has also acquired and turned over to the state the Big Oak Flat scenic route to the Yosemite Valley, and a more interesting trip than one by this route to the Yosemite, can not be had.'''\*

**VENTURA COUNTY.**

Date of creation, March 22, 1872.

	1890	1900	1910	1917 (estimated)
Land area, 1,878 square miles.	Population-- 10,071	14,367	18,347	21,252
County seat, Ventura (city).	Population-- 2,320	2,470	2,945	3,500
Population per square mile, 9.8.				

Ojai Valley (Station):	Highest	Lowest	Inches	Inches
Elevation, 900 feet.	1916: Temperature...105	25	Rainfall...36.25	Snow-- 0
	1917: Temperature...119	23	Rainfall...11.04	Snow-- 0
	1918: Station discontinued.			

Of Ventura County's 1,878 square miles, less than one-fourth is under cultivation. Back from the coast in all directions rise rugged mountain ranges, whose hearts are pierced in every direction with canyons and valleys of varying lengths. The entire northern section of the county is mountainous, but between the ranges here and there are to be found little valleys, whose soil is most productive. These two rivers, the Santa Clara and the San Buenaventura, rise in these northern mountains, their sources being separated but a few miles. The Piru River, the Sespe, and the Santa Paula River, each of considerable length from its winding through the mountain gorges and canyons, flow into and form the Santa Clara River, which enters the county on the south-eastern border, and flows in a generally western direction straight across to the sea.

"Ventura County, one of the group of eight of the southernmost counties of the state, lies between Santa Barbara County on the west and Los Angeles County on the east and extends from a 50-mile front on the shores of the Pacific Ocean (Santa Barbara Channel), north to the summit of the Coast Range mountains (Kern County line).

Its southern half is mainly under cultivation. In its northern portion, situated in the foothills of the Coast Range, are many valleys occupied and organized into (four) school districts.

Its principal streams are the Santa Clara River, having its source in the Coast Range and flowing across the county in a western direction and entering the sea about five miles south of the county seat; this is fed by large lateral streams of considerable length, known as the San Francisquito, Casitas, Piru, Sespe and the Santa Paula rivers. The San Buenaventura River, flowing southerly from the foothills, with San Antonio Creek of the Ojai Valley as a feeder, enters the sea at Ventura; also the Cuyama River, with its source and many lateral streams, situated in the northwest quarter of the county, flowing westerly.

Every variety of plant life does well in this county. It produces more lima beans than any other county in the state. There is a large acreage in sugar beets, which supplies the Oxnard sugar factory. Apricots, walnuts, lemons and oranges are some of the principal products of the county.<sup>77\*</sup>

**YOLO COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 1,014 square miles.	Population.. 12,684	13,618	13,926	14,150
County seat, Woodland (city).	Population.. 3,069	2,886	3,187	5,000
Population per square mile, 13.7.				

Davis (Station):	Highest	Lowest	Inches	Inches
Elevation, 51 feet.	1917: Temperature... 111	25	Rainfall... 9.50	Snow... 0
	1918: Temperature... 112	24	Rainfall... 16.69	Snow... 0

Yolo County is situated in a delta of the Sacramento River, where it changes from a southerly to a westerly course on its way to the Pacific. About 75 per cent of the county consists of level land, the balance being rolling hills and mountains. The principal industries are farming, stock raising and fruit growing.

Hops are produced along the river bottoms. There is considerable acreage in barley, wheat and rice, and in fruits, apricots, peaches and prunes are the leading crops.

The acreage in rice has increased from 1,500 acres in 1915, to 15,000 in 1918.

In 1916 the county packed 800 tons of Sultanias, 200 tons of Thompson's Seedless, and 200 tons of Muscat raisins in 1917, 800 tons of Thompson's, and in 1918 only 300 tons of Thompson's Seedless, the rains having damaged most of the crop.

Eucalyptus trees have been planted upon 1,790 acres. These trees, of which 320 acres are only a few years old, show a marvelous growth and bid fair to add great value to our forest products. The former value of land where these trees are now planted has increased fivefold. This industry is in its infancy, but is receiving much attention, as an increased acreage will be planted.

The county has a navigable river front of 90 miles along the Sacramento River, which affords at all seasons a cheap and ready means of transportation for the numerous products grown along its banks.

The reclamation of overflowed lands, which are very fertile, grows apace with other developments. Many large tracts have either been reclaimed, or are in course of reclamation.

At Davis, upon 685 acres of very fertile land, is located the State Agricultural Farm, which is affiliated with the State University, and which is presided over by competent professors, who instruct in various branches of agriculture, dairying, etc. This college is very popular, and its courses are being taken advantage of by a large number of students.

Yolo is one of the two counties in California that produces no minerals in commercial quantities, the other being Sutter County.

NOTE.—For details regarding the acreage and production of rice, see pages 115-117, and for raisins pages 181-185.

**YUBA COUNTY.**

Date of creation, February 18, 1850.

	1890	1900	1910	1917 (estimated)
Land area, 639 square miles.	Population-- 9,636	8,620	10,042	11,080
County seat, Marysville (city).	Population-- 3,991	3,497	5,430	6,000
Population per square mile, 15.7.				

	Highest	Lowest	Inches	Inches
Elevation, 67 feet.	1917: Temperature...108	24	Rainfall...10.89	Snow... 0
	1918: Temperature...110	25	Rainfall...19.30	Snow... 0

"Yuba County is about half valley and half mountainous. In the mountainous portion the industries at present are mining, lumbering, and stock raising. The proposed paved road through the mountainous section will permit the marketing of deciduous fruits, as apples and pears and olives in the foothills, many thousands of acres not now in use being especially adapted for the culture of the fruits mentioned. At Hammonton and Marigold on the Yuba River, dredge mining is carried on extensively, the immense dredge boats operating day and night. Many important quartz mines are in operation. Yuba's production of gold is three and one-half million dollars per annum. The Feather River forms the western boundary of the county and is navigable as far up as Marysville. Bear River is the southern boundary. The Yuba River flows west through the center of the county. These streams are never failing in water supply. Subterranean water is available in most parts of the county. Several irrigation districts take water from the three rivers. Farm crops are abundant, barley formerly having the largest acreage, now being replaced to a large extent by wheat and rice. In fruits, pears take the lead, with peaches, prunes, olives, figs and citrus fruits following. Much of the desirable area of the county is undeveloped awaiting the advent of paved roads. The Yuba River bottom lands once silted by hydraulic mining are now being cleaned and planted to pear orchards and truck crops. Enormous returns from crops on such lands have been received in the past seasons."

WILLIAM D. STEPHENS, Governor of California

REPORT  
OF THE  
STATE BOARD OF AGRICULTURE

---

LETTER OF TRANSMITTAL.

December 9, 1920.

*To the Honorable WM. D. STEPHENS,  
Governor of the State of California.*

DEAR SIR: We have the honor to submit herewith the sixty-sixth annual report of the State Board of Agriculture.

Within the pages of this report has been gathered, from various sources, information and statistics regarding the farms and farm lands of California, its population, its domestic animals, its poultry and dairy products, its farm crops and nursery products, and its horticultural productions.

Acknowledgment must be made of the splendid assistance given this Board by the various cooperative organizations throughout the state. They have done all in their power to secure for us reliable data regarding the products handled by them.

It is to be regretted that such a state as the State of California should be unable to include within the pages of the only collective statistical report of the state, information and statistics regarding its irrigation and manufacturing industries. It has been impossible, however, to include such data within the report due to the fact that but \$5,000 per annum has been appropriated for this most important work. This amount has been unchanged for eight years and is far inadequate to cover such a vast field as is presented by our wonderful state.

That the eyes of the world are turned upon the State of California is exemplified by the fact that requests for this report come not alone from over the whole United States but from Canada, Australia, South and East Africa, England, Japan, Mexico, New Zealand and the Philippine Islands.

An adequate appropriation should be provided to make possible the gathering of authentic figures and information regarding every phase of California's industries and resources. Not only is such information of vast importance to the building up and advancement of the state, but it will prove invaluable in the years to come.

The result of the activities of the State Agricultural Society during the past years was very clearly shown by the 1919 California State Fair. Without doubt, the annual gathering of the best of the live stock, agricultural and horticultural production of the state, where their merits are passed upon by some of the most competent judges in the country, has been the means of stimulating cattle men and farmers to produce only the highest type of live stock and the finest grades of agricultural and horticultural products. Each year competition becomes keener. Those who have been in attendance at the California State Fairs during the last decade can readily see the development of these various industries, brought about in a large measure by their exhibition at the State Fair where the best of California's products are displayed.

The completion and issuing of the 1919 report was considerably delayed by the death of Col. George Robertson, Statistician, who passed away on June 9, 1920. Mr. Robertson faithfully served this Board in the capacity of Statistician from April, 1911 to the date above mentioned, and to him much credit is due for bringing the report to its present usefulness. Although handicapped by lack of sufficient finances he used every effort to secure and incorporate within the report reliable information. It is with regret that we lose his valuable and faithful services.

*Chas. W. Raine*  
Secretary

*Geo. C. Downing*  
President

## FINANCIAL STATEMENT

July 1, 1919, to June 30, 1920.

## SUMMARY.

<b>APPENDIX D.</b> Acts Relating to the State Agricultural Society and the Collection of Statistics -----		193

## NOTES REGARDING CHANGES IN BOUNDARIES OF COUNTIES AND INCORPORATED PLACES

*Colusa*—Part taken to form Glenn in 1891.

*Del Norte*—Part annexed to Siskiyou between 1880 and 1890.

*Fresno*—Part taken to form Madera in 1893, and part annexed to Kings in 1909.

*Glenn*—Organized from part of Colusa in 1891.

*Humboldt*—Part of Klamath annexed in 1874.

*Imperial*—Organized from part of San Diego in 1907.

*Kings*—Organized from part of Tulare in 1893, and part of Fresno annexed in 1909.

*Lake*—Part annexed to Napa in 1872.

*Los Angeles*—Part taken to form Orange in 1889.

*Madera*—Organized from part of Fresno in 1893.

*Modoc*—Organized from part of Siskiyou in 1874.

*Monterey*—Part taken to form San Benito in 1874.

*Napa*—Part of Lake annexed in 1872.

*Orange*—Organized from part of Los Angeles in 1889.

*Riverside*—Organized from parts of San Bernardino and San Diego in 1893.

*San Benito*—Organized from part of Monterey in 1874.

*San Bernardino*—Part taken to form part of Riverside in 1893.

*San Diego*—Part taken to form part of Riverside in 1893, part taken to form Imperial in 1907.

*Santa Barbara*—Part taken to form Ventura in 1871.

*Siskiyou*—Part taken to form Modoc in 1874; part of Klamath annexed in 1874, and part of Del Norte annexed between 1880 and 1890.

*Tulare*—Part taken to form Kings in 1893.

*Ventura*—Organized from part of Santa Barbara in 1871.

---

## INCORPORATED PLACES

*Bakersfield*—Part of township 3 (Kern City) annexed in 1909.

*Berkeley*—Part of Oakland township annexed in 1906 and 1908.

*Fresno*—Part of township 3 annexed in 1910.

*Los Angeles*—Parts of Ballona, Burbank, Cahuenga, and San Antonio townships annexed between 1890 and 1900; part of Ballona township annexed in 1906; part of Wilmington township (including San Pedro City) annexed in 1909, and parts of Burbank and Cahuenga townships annexed in 1910.

*Oakland*—Parts of Brooklyn and Oakland townships annexed in 1909.

*Ontario*—Parts of Ontario township annexed in 1901.

*Pasadena*—Parts of Pasadena township annexed in 1904 and 1906.

*San Leandro*—Part of Brooklyn township annexed in 1909.

## COUNTIES AND COUNTY SEATS, ACREAGE AND PROPERTY VALUE, 1919.

Counties	County seat	Elevation, county seats	Approximate county land area, acreage	Number of acres of land assessed	Grand total of all property
Alameda	Oakland	6	468,480	457,960	\$284,635,472

# THE STATE OF CALIFORNIA.

(Date of organization as a Territory, March 1, 1847; as a State, September 9, 1850.)

## PART I.

### FARMS AND FARM LANDS.

**California and Other States; National Parks and Monuments; Vacant Public Lands; School and Railroad Lands For Sale; Indian Reservations; Homesteads; Land Registration; Dry Farming; Reclamation Projects; Soldier Land Settlements; Farms and Farm Lands; Value of Farm Lands; Use of Fertilizers; American Potash Industry.**

The State of California is about 780 miles in length; its breadth varies from 150 to 350 miles and its total area is 158,297 square miles, of which 2,645 are water surface. The coast line is more than 1,000 miles long. In size it ranks second among the states of the Union, Texas being the only one to exceed it. It is almost as large in total area of land and water as the following seven Eastern states combined:

State	Square miles
New York -----	49,204
Ohio -----	41,040
Maine -----	33,040
Vermont -----	9,564
New Hampshire -----	9,341
Massachusetts -----	8,266
New Jersey -----	8,224
Total -----	158,679
California -----	158,297

California has the highest and lowest land of the United States, the greatest variety of temperature and rainfall, and of products of the soil. The spread of irrigation and of intensive cultivation, and the increase of small farms during the last twenty years, have made California what it is today.

Agriculture had its beginning in wheat raising on great ranches, from fifty to several hundred thousand acres in extent; then deciduous orchard fruits and semitropical citrus fruits, successively.

Both the Spanish and Mexican governments made large grants of land to encourage settlement. These were used as cattle ranches exclusively, up to the time of the American occupation; and the exports consisted entirely of hides and tallow. These grants covered the valleys of the state to a large extent, and later were recognized and patented by the United States Government. No less than 553 of these claims, covering nearly nine million acres, were found to be valid.

Of the fifty-eight counties into which the state is now divided, the first twenty-seven were organized on February 18, 1850; ten years later

the number had increased to forty-two. In 1872, Ventura became the fiftieth county, and Imperial, the latest addition, was formed in 1907.

The land area of the state is about 100,000,000 acres, a great part of which is rough, mountainous country and desert, roughly classified as follows:

Land surface		Water surface		Total	
Square miles	Acres	Square miles	Acres	Square miles	Acres
155,652	99,617,280	2,645	1,692,800	158,297	101,310,080

Approximately one-half of the land surface of the state is under the control of the federal government, including 18,938,909 acres in the national forests, on June 30, 1918. The areas designated as "National Forests" were formerly called "Forest Reserves," but the title was changed by act of congress of March 4, 1907. Up to June 30, 1917, the amount of swamp land patented to the state was 2,115,416 acres. Of the public lands 80,759,237 acres are surveyed, including 179,777 acres in 1919, and 18,858,043 remain unsurveyed.

In 1919, 141 acres were bird reserves. In 1917, 7 patents were issued for 2,019 acres.

#### National Parks and National Monuments.

There are four national parks and six national monuments in California. The former were created by acts of congress and the latter by proclamations of the President. The name of each, with the date of creation and present area, is shown by the following table:

Name	Date created	Area, acres
Yosemite National Park*.....	Oct. 1, 1890	719,622.40
Sequoia National Park†.....	Sept. 25, 1890	161,597.00
General Grant National Park.....	Oct. 1, 1890	2,536.00
Lassen Volcanic National Park.....	Aug. 9, 1916	79,220.00
Devil Postpile National Monument.....	July 6, 1911	800.00
Lassen Peak National Monument‡.....	May 6, 1907	1,280.00
Cinder Cone National Monument.....	May 6, 1907	5,120.00
Muir Woods National Monument.....	Jan. 9, 1908	295.00
Pinnacles National Monument.....	Jan. 16, 1908	2,080.00
Cabrillo National Monument.....	Oct. 14, 1913	21,910 sq. ft.

\*Boundary changed by Congress in 1905 and again in 1906.

†Boundary changed by Congress October 1, 1890.

‡Within Lassen Volcanic National Park.

**Timber and Stone Entries—1915-1919 (Passage of Act June 3, 1878).**

Year	Entries	Area, acres	Amount
1915 -----	20,193	2,813,308	\$7,149,377
1916 -----	20,316	2,826,653	7,186,766
1917 -----	20,401	2,835,701	7,212,693
1918 -----	20,481	2,843,460	7,235,377
1919 -----	20,154	2,846,286	7,244,093

## Land and Scrip Granted to States for Educational and Other Purposes 1915 - 1919.

Year	Amount granted
1915 -----	\$6,236,773
1916 -----	6,236,773
1917 -----	6,236,773
1918 -----	6,236,773
1919 -----	8,377,538

## Purposes of Grant and Amount Granted in 1919.

	Amount granted
Internal improvements -----	\$500,000
University -----	46,080
Public buildings -----	6,400
Agricultural and mechanical colleges -----	150,000
Common schools (sections 16 and 36) -----	5,534,293
Swamp -----	2,140,765
Total -----	\$8,377,538

## VACANT PUBLIC LANDS.

Practically all the vacant public land which is easily accessible has been already taken up, the areas now remaining being situated at a considerable distance from towns or villages, or in remote mountain valleys.

Before entry, personal inspection of the lands should be made to ascertain if they are suitable, and when the applicant is satisfied on this point, entry can be made at the local land office. Information regarding vacant land in any district can be obtained on application to the register and receiver of the proper local land office, who will give full information regarding vacant land and the steps necessary to be taken in making entry. All vacant unappropriated public lands, non-mineral and nonsaline in character, are subject to entry under the homestead laws.

A regulation has recently been issued increasing the area of a homestead from 160 to 320 acres on land having no water supply, in Los Angeles, Imperial, San Diego and Riverside counties.

The total acreage of land unappropriated and unreserved on July 1, 1919, was 20,239,977 acres, of which 15,654,405 acres had been surveyed and 4,585,572 unsurveyed.

While the following figures may not be absolutely correct, owing to liability to error in a work of such magnitude and to the necessity of making estimates of unsurveyed lands, it is believed that they afford a close approximation to the actual areas. The statement is intended to inform correspondents and the general public as to whether there is much or little public land in the several land districts therein and in particular counties and localities.

## Vacant Public Lands, by Counties, Unappropriated and Unreserved July 1, 1919.

Counties	Land district	Acreage		Total acres	Brief description of land
		Surveyed	Un-surveyed		
Alameda -----	San Francisco --	814	1,280	2,094	Mountainous.

Totals -----	15,654,405	4,585,572	20,239,977

## SALE OF SCHOOL LANDS.

Certain school lands if suitable for cultivation are subject to sale to actual settlers thereon, pursuant to the provisions of chapter 395, Statutes of California, 1915. Large areas of land are also available to lease.

Forms for application to lease state lands from the state of California can be obtained from the State Surveyor General, Sacramento, California. A filing fee of \$5 must accompany the application to lease state lands, together with a letter from the applicant stating the maximum amount per acre that the applicant is willing to pay as the annual rental for the land desired to be leased, which letter from the applicant will be submitted to the State Board of Control when the Surveyor General determines the annual rental per acre of the land and submits same to the State Board of Control for approval, in accordance with the provisions of section 2 of chapter 493, statutes of California, 1917.

Anyone desiring to lease any of these lands can obtain free, a copy of the law governing the leasing of said lands and a list of the different tracts of state land subject to lease in the county in which he is interested together with a form for application to lease, on application to Surveyor General.

All money derived from the leasing of these lands goes directly to the support of the public schools.

The state has sold all of its swamp and overflowed land except a few isolated tracts which can be found only by an extensive search of the records of the State Land Office.

For the year ending August 1, 1918, 4,088.64 acres of school land suitable for cultivation were sold to twenty-five actual settlers at prices fixed by the State Board of Control and the Surveyor General, ranging from \$2.50 to \$30.00 per acre, as compared with the price of \$1.25 per acre received for the great majority of the school lands sold to speculators under the early methods of selling school lands.

On June 30, 1918, there were 813,573 acres of vacant school land unsold in California, 121,751 acres thereof being situated within national forests created by the federal government and being withheld from sale by the provisions of section 3408b of the Political Code. The remaining 691,822 acres are subject to sale.

Lands suitable for cultivation which are very limited in area can be sold to actual settlers at a price to be fixed by the State Board of

Control and the Surveyor General. Lands suitable for cultivation are sold at public auction to the highest bidder, but owing to conditions brought about by the war it was deemed advisable this year to postpone any sales until normal conditions were restored and prices commensurate therewith prevail.

There are no vacant school lands in the following counties: Alameda, Amador, Kings, Marin, Orange, Sacramento, San Benito, San Francisco, San Joaquin, San Mateo, Sutter.

#### RAILROAD LAND, 1919.

The following acreage in various counties belonging to the Southern Pacific and Central Pacific railways is also for sale:

County	Acres	County	Acres
Butte -----	9,341.83	Tulare -----	800.00
Tehama -----	6,165.88	Fresno -----	1,564.69
Yuba -----	4,779.30	Kern -----	126,881.45
Shasta -----	15,620.13	Los Angeles -----	45,379.67
Siskiyou -----	52,405.51	San Bernardino -----	176,756.80
Nevada -----	3,223.29	Orange -----	1,120.98
El Dorado -----	860.00	Riverside -----	91,104.60
Sierra -----	401.27	Imperial -----	2,161.58
San Benito and Monterey--	670.20		
Stanislaus -----	4,851.47	Total -----	544,018.65

#### Homesteads, 160 to 320 Acres.

A homestead entry is limited to 160 acres. An enlarged homestead may contain 320 acres, provided the land is nonmineral, nontimbered, and nonirrigable. These terms mean land which, as a rule, lacks sufficient rainfall to produce agricultural crops without the necessity of resorting to unusual methods of cultivation, such as the system commonly known as "dry farming," and for which there is no known source of water supply from which land may be successfully irrigated at a reasonable cost.

#### Stock Raising Lands (640 Acres).

These lands are those the surface of which is chiefly valuable for grazing and raising forage crops, which do not contain merchantable timber, are not susceptible of irrigation from any known source of water supply, and are of such character that 640 acres are reasonably required to support a family. The classification will be made, so far as practicable, to exclude lands that are not chiefly valuable for grazing and raising forage crops, either because too valuable for such use or too poor for such use. Lands which are capable of producing valuable crops of grain or other food cereal or fruit are not subject to designation, being, if otherwise subject to entry, disposable under the 160-acre or 320-acre homestead law, according to their character. Lands of such arid or poor character that they are worthless or fit only for occasional grazing in connection with large areas of other land are not subject to designation and entry. No tract may be designated which contains a water hole or other body of water, needed or used by the public for watering purposes, nor lands included in national forests.

Any person who desires to obtain a homestead must be a citizen of the United States or have declared his intention to become such, over the age of 21 years, and not the proprietor of more than 160 acres of land in the United States.

Six months from the date of filing is allowed to establish a bona fide residence on the homestead, which from that time to the date of the final proof must be the home of the applicant to the exclusion of a home elsewhere.

Under the new homestead law the entryman must, within six months after filing, establish actual residence on the land, build a habitable house and actually live on the land to make it a home for seven months out of each year for three years, and cultivate at least one-eighth of the land.

Residence can not be maintained by occasional visits to the land while the actual home is elsewhere. The homesteader must manifest entire good faith in occupying the land as a permanent home to the exclusion of one elsewhere.

The settler must show that he has cultivated one-sixteenth of the area of the land, beginning with the second year from date of entry, and one-eighth of the area the following year and until proof is submitted. A mere breaking of the soil will not meet the terms of the law, but such breaking and stirring of the soil must be accompanied by planting or the sowing of seed and tillage for crops other than native grasses. If his proof is satisfactory, and the government, after investigation, finds that he has complied with the law in good faith, his entry will be clear-listed, and in due time he will receive a patent for the land.

The homesteader may, before three years, by paying the purchase price of the land, at the rate of \$1.25 per acre if it is situate outside the limits of a railroad grant, and at the rate of \$2.50 per acre if it is within the granted limits of a railroad, offer what is known as commutation proof, which must show at least fourteen months of actual and substantially continuous residence, with bona fide cultivation and improvement of the land, immediately prior to his application to make such proof.

The United States Land Office fees and commissions for filing on 160 acres are \$16.00, if the land is outside of the limits of a railroad grant; if inside the granted limits of a railroad they would amount to \$22.00. The fees and commissions are computed upon the acreage of the tract entered.

The final proof commissions on 160 acres would be \$6.00, if the land is outside a railroad grant, and \$12.00 if inside the limits of a grant. Added to this are fees ranging from \$2.00 to \$4.00 based upon the number of words of testimony in the proof. There are no other fees or commissions required of a homesteader by the government.

Those who commute their homesteads must pay the purchase price of the land in addition to the above fees, except the final proof commissions, which are not required on commuted homesteads.

A township diagram, showing only entered lands in any township, can be procured by sending \$1.00 to the register and receiver of the land office of that district. The diagram required should be specified by township and range number.

In some counties only a few acres are reported as vacant, and in seven all the land has already been taken up. Neither the General Land Office nor the local land officers can furnish information as to the location of such tracts, but such information may be obtained from the records of the local land offices which, when not in official use, are open to inspection by prospective home seekers or their agents. There are a number of detailed regulations issued regarding enlarged homesteads, stock-raising homesteads, soldiers' additional rights, military service by homesteaders, and leave of absence for the purpose of performing farm labor, copies of which can be obtained from the General Land Office, Washington.

The following three counties have no unappropriated or unreserved public lands: Marin, Sacramento, and San Francisco.

#### **Dry Farming.**

The United States Government is not only interested in settling its irrigated lands, but also in developing all parts of its territory, and for this reason the various bureaus of the Department of Agriculture have been studying the soils of the West and also scouring the world to find crops suited for these regions. Dry farming is meeting with a certain amount of success in various parts of the country, and the combined efforts of all of these endeavors to make fertile and productive these lands will result in an era of unprecedented prosperity for the entire West.

#### **Reclamation Projects.**

If the entry is of a farm unit under the Reclamation Act it may be as small as 10 acres, if the lands are suitable for fruit raising or similar purposes, but in most cases units are fixed at from 40 to 80 acres each.

#### **California Land Settlement Acts.**

A tract now known as the Land Settlement of 6,415 acres was purchased in Durham, Butte County, and transferred to the state on May 7, 1918. Of this, 5,000 acres in round numbers have been subdivided and sold to settlers. Three hundred and sixty acres when purchased were under lease that expires in 1922 and about 40 acres was reserved for headquarters. About 700 acres is stony hillside land which is used for pasture. The subdivided land was cut up into 99 farms and 26 farm laborers' allotments. It was immediately applied for by settlers. All of the land is therefore revenue producing.

The available land was offered for settlement under the following conditions: Settlers were to pay 5 per cent of the cost of the land and 40 per cent of the cost of the improvements at the time of purchase, the remainder of the purchase price to extend over a period of 20 years, with interest at the rate of 5 per cent per annum. Payments are principal and interest to be made semiannually in accord with the amortization table of the Federal Farm Loan Board, the settler to receive a contract of purchase which sets forth the conditions of payment and the obligation he assumed, deed to the land to be given when payments are completed.

The ditching and leveling of land were treated as permanent improvements and the settler paid 40 per cent of the cost. Plowing and seeding

of land to grain was regarded as temporary improvements and the settler paid the cost in cash.

Settlers who intended to have live stock were required to form a cooperative stock breeders' association and agree to have nothing but pure bred sires in the settlement, the board agreeing to extend aid in the purchase of these if this proved necessary.

No settler was regarded as eligible to purchase a farm who had less than \$1,500 capital, or a working equipment of implements or live stock the equivalent of such capital, and settlers were advised that \$2,500 to \$3,000 was a better sum for those contemplating the purchase of a farm allotment, having 40 acres or more.

There were no requirements as to capital on the part of farm laborers. The savings from wages ought to meet the payments, as these would be less than the rental of a house in town.

The legislature in 1919 provided \$1,000,000 to be used in establishing a colony similar to the one at Durham, where the farms are all sold, and provided for a bond issue of \$10,000,000 for soldier settlements.

#### The Delhi Settlement in Merced County.

In 1919 the Land Settlement Board bought a second tract of 8,751 acres in Merced County. The first unit of this land has been cut up into 49 farms and 26 farm laborers' allotments and has been sold to actual settlers. Like Durham land, it was overapplied for.

The land at Delhi was sold under the following conditions: five per cent of the cost of the land is paid as a cash payment, the remainder is paid in 73 semiannual amortized payments of 3 per cent each. That is, the settler by paying 3 per cent of the debt every 6 months, pays it off (principal and interest) in  $36\frac{1}{2}$  years. Payment can be made in less time if the settler desires. Any improvements made requires a cash payment of 40 per cent of the cost, the board loaning 60 per cent, and payment of the remainder can be amortized and extended over 20 years with interest at 5 per cent.

Settlers applying for farms must have a capital of \$1,500 to be regarded as eligible. Settlers who apply for farm laborers' allotments are not required to have any definite capital.

Before the Delhi lands were thrown open to settlement, 100,000 Thompson seedless grape vines were planted on 160 acres. About 200 acres had been seeded to alfalfa and 600 to rye. A considerable area had been graded and prepared for irrigation but not planted. One million vines are being rooted for next years' planting and 10 acres of land has been given over to a nursery for the propagation of fruit and shade trees for the settlers. One of the first acts in preparing the land for settlement was the planting of 10,000 eucalyptus trees for wind breaks. The second unit at Delhi will be improved and offered to settlers in the spring of 1921.

The Durham settlers have met their payments and a recent audit of the Board of Control shows that there is an ample surplus of assets over liabilities to insure the return to the state of all the money advanced with interest.

The Cooperative Stock Breeders' Association of the Durham Settlement adopted one breed of dairy cattle, one breed of beef cattle, one breed of hogs and two breeds of sheep. Nothing but pure bred sires

can be used in the settlement and these if not owned by the Association must be approved by its executive committee. All cattle are tested every six months for tuberculosis and no tubercular animals are retained in the settlement. The Durham Stock Breeders' Association now owns 7 valuable registered Holstein bulls and has a cooperative chilling and separating plant for the sale of the milk of the community.

#### Foreign Land Grants.

"The Soldiers' Land Settlement Board of Canada has developed a sound business proposition in which success or failure depends entirely upon the man himself. That the scheme is proving successful is proved by the figures for last year. Up to the end of January 17, 1920, \$55,948,495 has been loaned to intending settlers. The number of individual loans was 18,548, and the average loan \$3,016. Up to December 27, 1919, 44,954 returned men had applied for qualification certificates and 33,920 applications had been approved.

"Up to the present time over 1,000,000 acres of free land have been taken up by returned soldiers in the West, the number of soldier grant entries up to the end of last year exceeding 9,000. About two-thirds of these soldiers have taken up an additional 160 acres of homestead lands so that the total land being worked will run well over a million acres.

"The Soldiers' Settlement Board has endeavored to secure the opening of further desirable areas in the West, and in July last Arthur Meighen, Minister of the Interior, obtained authority from Parliament to open up the Porcupine Indian Reserve in the Province of Saskatchewan. That this land is desirable for soldier settlers was demonstrated by the fact that in the three days following the opening of the reserve over 150 veterans had located there."

Australia has adopted a similar plan for the benefit of men who served during the war. It is estimated that 20,000 returned men will settle on the land, and that \$92,463,500 will be necessary to carry out the scheme proposed to settle these soldiers. Of this amount \$63,264,500 will be set apart for land purchase, and \$29,199,000 for assistance. The area specially purchased for soldier settlement up to November 30, 1919, was 397,060 acres, at an average cost of \$32.13 per acre.

New Zealand also has a large land settlement scheme for discharged soldiers, including provisions for both land and the erection of soldiers' dwellings on easy payment. In the year ending March 31, 1919, 348 allotments were made containing an area of 117,018 acres. The total amount of loans to soldiers to August 20, 1919, amounted to \$1,390,000.

In the Union of South Africa which includes the Cape of Good Hope, Natal, Transvaal, and the Orange Free State, Training Farms for returned soldiers have been established where courses are given by qualified instructors for a period of one year. Board, lodging, laundry and medical allowance are supplied free, and an allowance of \$12.50 per month is made in the case of single men and \$25 per month to married men.

#### FARMS AND FARM LANDS.

California ranks second in land area and eighth in population among the states of continental United States. The soils vary from heavy clay like "adobe" soils to sandy and gravelly loams.

Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. *Improved land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make and the statistics therefore must be considered at best only a close approximation.

Summary of Population and Farms, 1850-1910.

Year	Population	Number of farms	Land in farms		Per cent of land area in farms
			All land	Improved	
1850	92,597	872	3,893,985	32,454	3.9
1860	379,994	18,716	8,730,034	2,468,034	8.8
1870	560,247	23,724	11,427,105	6,218,133	11.5
1880	864,694	35,934	16,593,742	10,669,698	16.7
1890	1,213,398	52,894	21,427,293	12,222,839	21.5
1900	1,485,053	72,542	28,828,951	11,958,837	28.9
1910	2,377,549	88,197	27,931,444	11,389,894	28.0

Summary of Values, 1850-1910.

Year	Total value	Land and buildings	Implements and machinery	Domestic animals, poultry, and bees
1850	\$7,328,582	\$3,874,041	\$103,483	\$3,351,058
1860	86,870,327	48,726,804	2,558,506	35,585,017
1870	184,521,470	141,240,028	5,316,690	37,964,752
1880	*311,997,443	262,051,282	8,447,744	*41,498,417
1890	*777,381,767	697,116,630	14,689,710	*65,575,427
1900	796,527,955	707,912,960	21,311,670	67,303,325
1910	1,614,694,584	1,450,601,488	36,493,158	127,599,938

\*Includes estimated value of range animals.

Value of Farm Lands, 1912-1916.

The United States Department of Agriculture estimates the value per acre of farm lands in California and the United States as follows:

Average Value of All Farm Lands, Per Acre, 1912-1916.

	Without improvements			With improvements		
	1912	1915	1916	1912	1915	1916
California	\$70 00	\$100 00	\$110 00	\$107 00	\$175 00	\$180 00
United States	36 23	40 85	45 55	57 89	64 82	69 45

Increase in Farm-Land Values.

The average value of plow lands per acre in the United States increased about 21 per cent during the past year; this increase may be compared with an increase of about 17 per cent in wages paid farm labor, and an increase in the value per acre of crops produced of about 9 per cent. Making comparisons with 1914-15, five years ago, that is,

before the sharp upturn in values, it appears that land values have increased about 70 per cent, farm wages have increased about 100 per cent and value per acre of crops about 124 per cent.

Average Value of Plow Lands, Per Acre, 1916-1919.

	California	United States
Average of poor plow lands—		
1916 -----	\$55 00	\$42 67
1917 -----	66 00	47 86
1918 -----	69 00	51 26
1919 -----	70 00	60 76
Average of good plow lands—		
1916 -----	150 00	78 34
1917 -----	168 00	85 48
1918 -----	165 00	91 83
1919 -----	175 00	113 34
Average of all plow lands—		
1916 -----	110 00	62 17
1917 -----	120 00	68 38
1918 -----	121 00	74 31
1919 -----	130 00	90 01

The value of farm lands is increasing steadily in the United States. Iowa stands first in value of plow lands, her average being \$219 per acre, followed by Illinois with \$170 and California and Arizona each with \$130. In 1915 the average value per acre in California was only \$95. In the United States the average in 1915 was \$58.39, and in 1919 \$90.01.

Summary of Farms by Acreage in California, 1850-1910.

Acreage	1850	1860	1870	1880	1890	1900	1910
Under 3 acres-----				143	401	1,492	1,269
3 to 9 acres-----		829	2,187	1,064	2,827	5,354	9,324
10 to 19 acres-----		1,102	1,086	1,430	4,010	8,236	11,932
20 to 49 acres-----		2,344	3,064	3,475	7,691	13,110	20,614
50 to 99 acres-----		2,428	3,224	3,969	5,796	8,067	10,801
100 to 499 acres-----		6,541	12,248	20,214	24,531	26,201	24,566
500 to 999 acres-----		538	1,202	3,108	4,367	5,329	5,119
1,000 acres and over-----		262	713	2,531	3,672	4,753	4,693
Total number of farms--	872	18,716	23,724	35,934	53,295	72,542	88,197
Average acres per farm---	4,465.6	466.4	481.7	461.8	405.0	397.4	316.7

Size of Farms, Improved and Unimproved, 1850-1910.

Acreage	1850	1860	1870	1880
Total number of acres in farms----	3,893,985	8,730,034	11,427,105	16,593,742
Acres of improved land-----	32,454	2,468,034	6,218,133	10,669,698
Acres of unimproved land-----	3,861,531	6,262,000	5,208,972	5,924,044
Per cent of farm land improved----	0.8	28.3	54.4	64.3

Acreage	1890	1900	1910
Total number of acres in farms-----	21,427,293	28,828,951	27,931,444
Acres of improved land-----	12,222,839	11,958,837	11,889,894
Acres of unimproved land-----	9,204,454	16,870,114	16,541,550
Per cent of farm land improved-----	57.6	41.5	40.8

## Farm Tenure.

The number of all farmers in 1910 was 88,197. Of these, 66,632 are classed as owners, 3,417 as managers, and 18,148 as tenants.

Of the 66,632 owners, 56,500 operate land owned exclusively by them, while 10,132 operate land which they rent in addition to that which they own. The owners hold 75.5 per cent of all farms, tenants 20.6 per cent, and 3.9 per cent is operated by managers.

## The Use of Fertilizers.

From figures compiled by the United States Department of Agriculture it appears that the use of fertilizers is increasing in many states:

	Fertilizer per acre, where used, pounds			Value of fertilizer per acre, 1917
	1917	1916	Usual year	
Virginia -----	400	290	330	\$7 30
North Carolina -----	400	303	397	6 25
South Carolina -----	350	270	410	5 00
Georgia -----	225	198	288	3 60
Florida -----	200	160	230	3 00
Alabama -----	175	180	280	2 50
Mississippi -----	180	170	219	2 40
Louisiana -----	200	185	210	2 60
Texas -----	160			2 25
Arkansas -----	160	163	185	2 50
Tennessee -----	190	175	186	2 40

The American potash industry is largely the outgrowth of war conditions. Prior to the European war the amount of potash used in the United States amounted to about 1,000,000 gross tons of the salts, containing about 250,000 tons of pure potassium oxid, or potash. Practically all of this potash came from Germany, and about 95 per cent of the amount imported was used in agriculture. In 1914 potash was selling in the United States at approximately 75 cents per unit (20 pounds of potash), the average wholesale price at Atlantic ports.

Potash is essential to the best development of many crop plants, and therefore must be supplied as a fertilizer ingredient where the soil does not contain a sufficient quantity of it. During the war imports were very much curtailed, and many crops previously supplied with potash had to be grown without this fertilizer ingredient. The following table shows the imports and domestic production of potash:

Imports and Domestic Production of Potash, 1913 to 1919 Inclusive.

Year	Imports, tons	Domestic production, tons	Year	Imports, tons	Domestic production, tons
1913 -----	270,720	Nominal	1917 -----	8,100	32,573
1914 -----	207,089	Nominal	1918 -----	7,957	54,562
1915 -----	48,867	1,090	1919 -----	20,716	-----
1916 -----	7,885	9,720			

Searles Lake, California, is the third largest source of soluble potassium salts known in the world. It has 20,000,000 tons of potash in natural saturated brines. Production began in 1916, and the annual

capacity of the two producing plants now in operation is about 25,000 tons of actual potash, which is marketed in the form of salts containing 40 per cent. Soda ash, borax, common salt, and sodium sulphate are associated with the potash, and if recovered might lessen the cost of the potash. Reports have been received regarding serious injury to crops resulting from the use of potash fertilizers containing considerable percentages of borax, and at the present time it is not possible to say to what degree the borax must be removed in order to make this potash satisfactory for agricultural purposes.

#### TORRENS LAND ACT.

The Torrens law was first adopted in this state in 1897, California being the first state in the Union to pass a land registration act.

The law was designed to simplify the transfer of real estate and to give the property owners a quick and inexpensive means of transfer after the land has once been bought under the system. The act adopted in 1897 was unsatisfactory, only a few titles being taken out thereunder; the act of 1914 being intended to remedy the defects in the old law.

The initial proceedings to registration are similar to an ordinary suit to quiet title. After a decree of court is obtained a certificate is issued by the registrar of deeds, which certificate is conclusive evidence that the party named thereupon is the owner of the property subject only to such liens or objections as may appear on the certificate. Subsequent transfers are made by deed or by assignment of the certificate after which the registrar of titles issues a new certificate to the new owner.

Torrens titles are protected by state insurance. When the land is first brought under the act the owner pays into the assurance fund one-tenth of one per cent of the assessed value of the land, including permanent improvements thereon as the same were valued for county taxation the last time said land and permanent improvements or either thereof were assessed. All subsequent purchasers are insured without further cost.

Title to property under the Torrens Act can not be questioned after it has once passed into the hands of an innocent third party for value, but a party sustaining injury through the workings of the act can recover the value of the property from the assurance fund in the hands of the State Treasurer. On December 31, 1919, the assurance fund contained \$13,713.72. On the same date eleven counties had adopted this system of registration: Humboldt, Imperial, Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Francisco, Santa Cruz and Tulare counties.

## PART II.

### POPULATION OF CALIFORNIA.

**Population 1850-1920; Density of Population; Blind, and Deaf and Dumb Population; Indians of California; Japanese Statistics; Marriage, Births, and Deaths, 1919; Number of Schools, Teachers, and Pupils, by Counties; One Hundred Years of Immigration 1820-1919.**

The first settlement in California was made by the Spaniards in 1769, when the Franciscan Fathers founded a mission at San Diego. In 1776 the Mission Dolores was established where San Francisco now stands. California was under Spanish rule until 1822, when, at the termination of the Mexican revolution, it declared its allegiance to Mexico. For several years prior to 1846 large numbers of immigrants from the United States had been arriving in California, and in June of that year a revolt against Mexico was begun by the American settlers. In July and August the American flag was raised at Monterey, San Francisco, Sonoma, Sacramento, San Jose, San Diego, Santa Barbara, Los Angeles, and other places.

In February, 1848, at the close of the Mexican war, California was ceded to the United States. From 1846 to 1849 California was under military and provisional rule by the United States. In October, 1849, a state constitution was adopted at Monterey, and on September 9, 1850, California became a state of the Union.

Population of California, 1850-1920.

Year	Population	Increase over preceding census	
		Number	Per cent
1850	92,597		
1860	379,994	287,397	310.4
1870	560,247	180,253	47.4
1880	864,694	304,447	54.3
1890	*1,213,398	348,704	40.3
1900	1,485,053	271,655	22.4
1910	2,377,549	892,496	60.1
1920	3,425,675	1,048,987	44.1

\*Includes population of Indian reservations (5,268).

During each decade since 1850, the population of California has increased more rapidly than that of continental United States. The population of the state in 1920 was more than thirty-seven times as large as in 1850, while the population of the continental United States was a little less than four times that in 1850.

## Rank in Population of the Fifty States and Territories.

California ranked twenty-ninth in 1850, twenty-sixth in 1860, twenty-fourth in 1870 and 1880, twenty-second in 1890, twenty-first in 1900, twelfth in 1910 and eighth in 1920.

## The Density of Population Per Square Mile, 1850-1917.

1850 -----	0.6	1890 -----	7.8
1860 -----	2.4	1900 -----	9.5
1870 -----	3.6	1910 -----	15.3
1880 -----	5.5	1920 -----	21.6

The density of population in California is low, the average number of persons to the square mile in 1920 being 21.6. The average number per square mile for continental United States in 1910 was 30.9. This compares with 508.8 in Rhode Island, 418.8 in Massachusetts, 337.7 in New Jersey, 191.2 in New York, 342.4 in the United Kingdom, and 213.3 in India. The Australian commonwealth has only 1.39 to the square mile, New Zealand 7.8, and Canada 1.4, 589 in Belgium, 436 in Holland, 188 in France, and 270 in Germany.

Two territorial changes have taken place since 1900: The eastern portion of San Diego County was taken into Imperial County in 1907, and part of Fresno County was annexed to Kings County in 1909.

## Population, by Counties, in 1910 and 1920.

Rank	County	Census 1910	Population 1920
3	Alameda	246,131	344,127
38	Alpine	309	243
45	Amador	9,086	7,793
22	Butte	27,301	30,030

Totals		2,377,549	3,425,675

## THE INDIANS OF CALIFORNIA.

The Indians were prominent in early California history, but their progress towards their present insignificance began far back in the Spanish period. It proceeded much more rapidly after the restraining influence of the Missions was removed, leaving them free to revert to savagery; and the downward progress of the race was fearfully accelerated during the mining period, when they were ambushed, depraved, and in large numbers killed. There have been no Indian wars in California's annals, but many butcheries.

They are of at least fourteen different linguistic stocks. The government, in dealing with the California tribes, did not follow the policy pursued with the wild Indians of the plains, and no treaties were made with them and no remuneration paid for lands acquired by white settlers.

The prejudice against the Indians is being dispelled, for the reason that those who have been obliged to depend upon them to do farm work in many localities have discovered that the Indians as laborers are dependable, reliant, efficient.

The problem of labor in California being one of increasing importance, owing to the development of various activities and industries, it is true that the Indians will be called upon more and more for industrial service, until this demand becomes permanent.

With this point in view, it must be gratifying to everyone to know that the government maintains a large number of fine schools in the state for educating and training young Indians, and in several schools for giving them instruction along specific vocational lines. The younger Indians who are attending school realize that the old order of things is passing, and that the Indians will in a few years become an important part of a great state.

Large numbers are located on twenty-six reservations, namely: Hoopa Valley, Round Valley, Tule River, Yuma, and twenty-two Mission reservations.

Most of the Mission Indians are located on small reservations scattered over 10 of the 58 counties of the state, viz.: Amador, Humboldt, Inyo, Mendocino, Modoc, Plumas, Riverside, San Diego, Santa Barbara, and Tulare. Among them are found representatives of a number of different tribes.

Round Valley reservation, embracing an area of 59 square miles, is situated in Mendocino County, and the remnants of nine small tribes are located here, who might well be classed as civilized. Tule River reservation in Tulare County contains 76 square miles, and contains the remainder of the once powerful Tule tribe. The Yuma reservation contains an area of 71 $\frac{3}{4}$  square miles, the Indians living on this section being the most primitive of the California tribes in manners and customs.

The largest allotments are 42,106 acres in the Round Valley reservation; 29,091, in the Hoopa Valley reservation, and 8,010 acres in the Fort Yuma reservation. The allotments on June 30, 1918, number 2,593, the acreage amounting to 82,172 acres allotted, 434,946 unallotted, or a total of 517,118 acres.

The principal industries other than farming and stock raising engaged in by Indians are basket making, blanket weaving, bead work,

pottery and wood cutting. The value of crops raised in 1919 was \$558,838, stock sold \$72,182, native industries—weaving, basketry, \$147,318, and wages earned \$511,664. The total value of individual and tribal property including lands and timber in 1919 amounted to \$11,982,306, all items showing a large increase over the year 1918.

Indian Population, Years Ending June 30, 1890 - 1919.

1890	12,108
1900	11,431
1915	15,034
1917	15,362
1918	15,725
1919	16,215

JAPANESE STATISTICS.

In March, 1912, the Japanese owned 331 farms in California containing 12,726 acres, the assessed value of the land being \$478,990, the improvements \$130,615, or a total of \$609,605.

The most recent investigations show that the Japanese own 526 farms in California, consisting of 30,305 acres.

In 1909, the Japanese occupied a total of 83,253 acres, producing crops valued at \$6,235,856. In 1919 the Japanese occupied 427,029 acres, producing crops valued at \$67,145,730; an increase of 412.9 per cent in acreage occupied, and 976.8 per cent increase in value of crops produced.

Chinese and Japanese Population of California December 31, 1919.\*

Explanation	Chinese	Japanese	Total
(1) Population April 15, 1910	36,248	41,356	77,604
(2) Immigrants admitted from April 15, 1910, to December 31, 1919	11,914	32,196	44,110
	48,162	73,552	121,714
(3) Emigrants departed from April 15, 1910, to December 31, 1919	11,125	7,110	18,235
	37,037	66,442	103,479
(4) Immigration from Hawaii from July 1, 1910, to June 30, 1919	108	506	614
	37,145	66,948	104,093
(5) Registered births from April 15, 1910, to December 31, 1919	3,741	27,828	31,569
	40,886	94,776	135,662
(6) Reported deaths from April 15, 1910, to December 31, 1919	7,615	7,497	15,112
Population as of December 31, 1919	33,271	87,279	120,550

\*Figures do not take into consideration possible increase in population by smuggling or illegal entry, nor do they include the large number of arrivals from Hawaii of Japanese who acquired American citizenship by birth on the Islands or as residents when Hawaii was annexed by United States. These latter come into California as American citizens, moving from one part of United States to another, without being listed on immigration records.

(1) Determined by United States Census enumeration as of April 15, 1910. See Bulletin No. 127 of the Permanent Census Bureau, pages 7 and 25.

(2) Determined for the period from July 1, 1910, to June 30, 1919, from the annual reports of the Commissioner-General of Immigration and strictly confined to "immigrant" (as distinguished from "non-immigrant") aliens admitted, who indicated California as their intended future residence.

For the period from April 15 to June 30, 1910, an approximation was made based upon that season's proportionate share of total arrivals for the year reported, and applied to "immigrants" intending to reside in California as reported for the fiscal year ended June 30, 1910.

For the period from July 1 to December 31, 1919, "immigrant" arrivals admitted at the port of San Francisco are used in the absence of other available data.

(3) Determined for the period from July 1, 1910 to June 30, 1919, from the Annual Reports of the Commissioner-General of Immigration and strictly confined to "emigrant" (as distinguished from "non-emigrant") aliens departed, who gave California as their last permanent residence.

For the period from April 15 to June 30, 1910, and from July 1 to December 31, 1919, respectively, the methods described under Note 2 were employed in the determination of the number of emigrants for those periods.

(4) Determined, for the period indicated from the Annual Reports of the Commissioner-General of Immigration for 1914 to 1919. For the period from July 1, 1910 to June 30, 1914, the proportion of arrivals destined to California from July 1, 1907 to June 30, 1914, was applied.

(5) Determined from the official records of the State Board of Health. To exclude period from January 1 to April 15, 1910, 7/24 of the total reported for the calendar year 1910 was subtracted. Figures for 1919 are subject to negligible changes.

(6) Same as Note 5.

## Marriages, Births, and Deaths in California, 1917-1919.

## One Hundred Years of American Immigration, 1820 - 1919.

The following table, showing the number of immigrant aliens admitted to the United States in the last 100 years and giving, for purposes of comparison, the population in these years:

Year	Population	Immigration	Per cent of population
1820	9,638,453	8,385	0.09
1830	12,866,020	23,322	.18
1840	17,069,453	84,066	.49
1850	23,191,876	310,004	1.34
1860	31,443,321	133,143	.42
1870	38,558,371	387,203	1.00
1880	50,155,783	457,257	.91
1890	62,947,714	455,302	.72
1900	75,994,575	448,572	.59
1910	93,551,257	1,041,570	1.11
1914	100,102,081	1,218,480	1.22
1915	101,739,788	326,700	.32
1916	103,377,495	298,826	.29
1917	105,015,203	295,403	.28
1918	106,652,911	110,618	.10
1919	108,405,738	141,132	.13

The effects of the war are clearly shown by the above figures, the percentage of immigrants compared with the population having fallen off from 1.22 per cent in 1914 to .13 per cent in 1919.

## Countries From Which the Immigrants Came.

Of the total of 33,200,103 immigrant aliens admitted to the United States during the last 100 years, 29,552,198 were from Europe, 788,290 from Asia, and 1,883,267 from British North America.

The United Kingdom ranks first as a source of American immigration since 1820, followed by Germany, Italy, Austria-Hungary, the Russian Empire, and British North America. Sweden has sent 1,110,377 immigrants to the United States. France has contributed only 523,820 in the past hundred years.

In 1820 the United Kingdom was credited with 5664 of the total of 8385 immigrants admitted, and for nearly half a century continued to send to the United States annually greater numbers than any other nation, of which the Irish constituted the predominant element. In view of its size, it is remarkable that Ireland has supplied 4,348,759 immigrants in the last 100 years—a number practically equal to its present population (4,390,219 according to the census of 1911). The arrivals from England for the same period totaled 2,434,144.

Statistics show that in certain years the Irish element not only outnumbered all other immigrants from Europe (including the remainder of the United Kingdom), but exceeded the total immigration of all other countries. For instance, in 1820, of the total immigration of 8385, 43 per cent was from Ireland; in 1826, of the total of 10,837, over 50 per cent was from Ireland; in 1829, of the total of 22,520 immigrant aliens admitted to the United States, 7415, or 33 per cent, were from Ireland. The great famine in Ireland and other causes led 105,536 persons to migrate to the United States in 1847, constituting nearly one-half of the total immigration of 234,968 from all countries; in

1848, 112,934, or 50 per cent of the total of 226,527; in 1849, 159,398 out of a total immigration that year of 297,024; 164,004 out of a total of 369,980 for the 15 months ending December 31, 1850; and 221,253 out of a total of 379,466 from all countries in 1851, which record holds until the present time, although Irish immigration continued to be expressed in six figures annually until 1855 and in five figures thereafter until 1916. It fell to the low record of 331 in 1918.

From 1854 until the Civil War period, German immigration constituted annually from one-fourth to one-third of the total number from all countries. While it decreased in 1862-1864, the increased numbers admitted in the three following years restored the average. It dropped again during the later seventies, but largely increased again in the eighties, the high record during the last 100 years being reached with 250,630 in 1882. Following that peak year a sharp decline occurred, and in 1900 immigrants from Germany numbered only 18,907 out of a total of 448,572, and in 1910, 31,283 out of a total of 1,041,570. The total number of immigrant aliens admitted into the United States from Germany during the century under review was 5,494,638.

Italian immigration is of comparatively recent growth. The total of arrivals prior to 1855 was insignificant, but by 1880 there was an ever-increasing number admitted annually, rising to 100,135 in 1900 and reaching the high record of 285,731 in 1907, or 22 per cent of the total immigration in that year. The total number of arrivals from Italy during the 100 years just ended is 4,100,735.

An aggregate of 3,279,254 immigrants from European Russia arrived in the United States during the last 100 years. The number admitted annually prior to 1872 was small, but in that year a slow but fairly steady growth in Russian immigration began, reaching six figures in 1902, and the high record of 291,040 in 1913—nearly 25 per cent of the total number of arrivals from all countries in that year.

Of a total of 788,290 Asiatics admitted to the United States since 1820, 345,008 were Chinese, and 232,749 Japanese, and 180,834 came from Turkey in Asia.

## Population by Counties, 1850 to 1920.

(Census Reports.)

Counties	1850	1860	1870	1880	1890	1900	1910	1920

### PART III.

## DOMESTIC ANIMALS.

---

**Horses, Mules, Asses, Cattle, Sheep and Goats; Swine; Recognized Breeds of Domestic Animals; Wool and Mohair; Number and Value of Farm Animals 1880-1919; Imports and Exports of Farm Animals; Leading States in Number of Farm Animals; Summary of Farm Animals in 1919.**

#### HORSES, SHEEP, AND SWINE IN THE UNITED STATES, 1919.

##### Horses.

The horse supply of the country reached its maximum in 1918; since then the numbers have been diminishing gradually, during the past two years the increased demand for feed for high-priced meat animals, has made it relatively more costly to keep a horse on the farm. Also the use on farms of automobiles, trucks and tractors has been increasing. The average value per head of all ages is \$94.39, compared with \$98.45 a year ago, and \$108.03 ten years ago. The horse market has been unsettled and much uncertainty prevails as to the future. The best demand during the past year has been in the South. Heavy decreases have occurred in numbers of western range horses.

##### Sheep.

The slight reduction in numbers of sheep is due to the decreases in the mountain states of Montana, Wyoming, Colorado, New Mexico, and Arizona. In most other states there have been increases. Prices have declined from the high level of the past two years, being \$10.52 per head, compared with \$11.63 a year ago, but \$4.12 ten years ago.

##### Swine.

Swine increased in numbers generally in the eastern and southeastern states, but decreased most heavily in the group of states comprising Illinois, Iowa, Missouri, Nebraska and Kansas.

Although there are fewer hogs in the country than a year ago, their average weight is heavier, being approximately 150 pounds, compared with about 140 pounds a year ago.

A feeling of disappointment is widely expressed by the recent slump of prices. The average price per head on January 1 was \$19.01, as compared with \$22.02 a year ago, and \$9.17 ten years ago.

Shorthorn cattle, Duroc-Jersey hogs and Merino sheep are the leading breeds of live stock according to figures obtained by the U. S. Department of Agriculture.

The results of the United States are as follows: For cattle Shorthorn (Durham) represent 22.6 per cent of the whole number of cattle; Herefords, 21 per cent; Holstein, 16.2; Jersey, 14; Aberdeen Angus, 3.6; Guernsey, 2.9; Red Polled, 2.6; Polled Durham, 1.5; Galloway, 0.8;

Ayrshire, 0.6; Brown Swiss, 0.3; Devons, 0.3; Dutch belted, 0.2; others, 3.1; nondescript (unclassified), 10.3; total, 100. It will be observed that the beef breeds preponderated over the milk breeds. Holsteins are most numerous of the milk breeds; in the Northern States they are two to three times as numerous as the Jerseys; in the Southern States, however, the Jersey is three to five times as numerous as the Holstein; in other words, the Holstein decreases in relative numbers from north to south, and the Jersey increases relatively in going from north to south.

The relative rank of swine breeds is as follows: Duroc-Jersey, 34.2 per cent of all swine; Poland China, 27.9; Chester White, 10.7; Berkshire, 9.2; Razorback, 4.2; Hampshire, 3.9; Tamworth, 0.7; Yorkshire, 0.6; Cheshire, 0.3; others, 2.7; nondescripts, 5.6; total, 100.

Among the sheep rank is as follows: Merino, 25.4 per cent of all sheep; Shropshire, 23.2 per cent; Rambouillet, 13.3; Cotswold, 7.2; Hampshire, 6.1; Southdown, 6.1; Lincoln, 3.8; Oxforddown, 1.9; Dorset, 0.7; Cheviot, 0.3; Leicester, 0.3; Tunis, 0.1; others, 3.5; nondescript, 8.1; total, 100. The merino predominate in the western range states, but the Shropshire largely predominate on the farms in the Eastern states.

#### HORSES.\*

The term "light" when applied to horses refers to that class which is intermediate in size between ponies and draft horses and which usually has more range, a greater degree of quality, better action, or greater speed than either. A majority of our light horses are from 15 to 16 hands high and weigh from 900 to 1,250 pounds.

There is no best breed of light horses. Some breeds are superior to others in certain respects and one breed may be better adapted than another to certain local conditions. The general requirements for a particular section and the popularity of a certain breed in a certain locality should receive the utmost consideration in choosing a breed.

*The Arabian*.—The oldest breed of horses generally recognized at the present time and the fountainhead of all our other light breeds was developed in the desert country of Arabia, from which it derives its name.

*Thoroughbred*.—The name "Thoroughbred" is applied properly only to the breed of running race horses produced originally in England. Three Arabian stallions are credited with having laid the foundation for this breed, their names being Byerly Turk, The Darley Arabian, and Godolphin Arabian, and they produced the three famous racing families, Herod, Eclipse, and Matchem, respectively.

*Standardbred*.—The Standardbred is an American breed developed primarily for extreme speed at the trot and pace. The imported Thoroughbred stallions Messenger and Bellfounder founded this breed by leaving descendants that showed speed at the trot. The ancestry of the pacer is not different from that of the trotter, but today some families produce a much larger proportion of pacers than others, while many individuals show speed at both gaits. Both trotters and pacers are registered in the same studbook.

The early residents of Kentucky, Tennessee, Virginia, and West Virginia found horses with easy gaits to be the most desirable to ride

\*For list of Breeders' Associations, see Appendix C.

over plantations, semimountainous grazing farms, and on long journeys. In the preference for such gaits they laid the foundation for and promoted the pioneer development of the American Saddle Horse. Sections of Missouri also soon took up the breeding of easy-gaited saddle horses, and today this state ranks next to the mother state (Kentucky) in the production of high-class individuals.

Thoroughbred, Morgan and Canadian blood form the basis for this breed.

*Morgan.*—The Morgans have sometimes been considered a family of the Standardbred, but as these horses have been bred more for their utility qualities than for speed, and as their characteristics are well established and perpetuated with marked regularity, it is proper to consider them as a distinct breed. The early development of the Morgans took place in the New England states, thus giving this country the credit of founding three light breeds.

*Hackney.*—The first driving horses used in England of which much is known were the Norfolk trotters, they being the result largely of breeding Norfolk mares to Thoroughbred stallions, thus giving the foundation for the Hackney breed.

*French Coach.*—The term French Coach is used in this country to designate horses produced in France largely by Government aid and with the special object of obtaining animals especially well suited for military purposes. Such horses are not known as French Coach in their native country, but are termed Demi-Sang (half-breed). In this country the term half-bred is applied to horses of half or more Thoroughbred blood.

*German Coach.*—Germany, with the object of producing a large, strong, and active horse that would be especially well adapted to carrying the German soldier and his heavy equipment and to hauling artillery, established the breed of horses known in this country as the German Coach. In Germany there are several distinct breeds of such horses, each of which is registered in a separate studbook.

*Cleveland Bay.*—Although little is definitely known concerning the foundation of the Cleveland Bay breed, it is generally conceded that Thoroughbred blood played an important part in giving the Cleveland Bay many of its desirable characteristics. The early development of horses of this type, which were selected for bay color with practically no white, took place largely on the pastured Cleveland hills of Yorkshire County, England, the color sought and the locality being responsible for the breed name. In England the Yorkshire Coach is considered a separate breed from the Cleveland Bay, but in this country they are registered in the same studbook.

**RECOGNIZED BREEDS AND PURE BRED ANIMALS IMPORTED.**

(Under an act of Congress, approved August 5, 1909, effective on and after November 11, 1913.)

Horses.	
Name of breed	Book of record
Belgian Draft	Studbook des Chevaux de Trait Belges
Clydesdale	Clydesdale Studbook
French Draft	Studbook des Chevaux de Trait Francais
Hackney	Hackney Studbook
Percheron	Studbook Percheron de France
Shetland Pony	Shetland Pony Studbook
Shire	Shire Horse Society Studbook
Suffolk	Suffolk Studbook
Thoroughbred	*Australian Studbook
Thoroughbred	*Studbook Francais Registre des Chevaux de Pur Sang
Thoroughbred	General Studbook
Welsh Pony and Cob	Welsh Pony and Cob Studbook

\*Provided that no animal or animals registered in the Australian or in the French thoroughbred studbooks shall be certified as pure bred unless such animal or animals trace in all crosses to animals which are proved to the satisfaction of the department to be of the thoroughbred breed.

**Recognized Breeds and Books of Record in Canada.**

The Canadian National Records are recognized for the following breeds, provided that no animal or animals registered in the Canadian National Records shall be certified by the Secretary of Agriculture as pure bred unless such animal or animals trace, in all crosses, to animals which are proved to the satisfaction of the department to be of the same breed and to have been imported from the country in which the breed originated:

Belgian Draft.	Standardbred.
Clydesdale.	Suffolk.
Hackney.	Thoroughbred.
Shire.	Welsh Pony and Cob.

**Certificated Horses Imported, 1914 - 1919.**

The following table shows the number of certificated horses imported for breeding purposes during the calendar years ending December 31, 1914-1919 for which certificates of pure breeding have been issued by the Bureau of Animal Industry of the United States Department of Agriculture. Owing to the war the numbers show a considerable decrease compared with 1914:

Breeds	1914			1915			1916		
	Stallions	Mares	Total	Stallions	Mares	Total	Stallions	Mares	Total

Totals -----	270	341	611	89	98	187	26	61	87

No horses of the Arabian, Belgian, Percheron, Shetland Pony, Suffolk, or Welsh Pony breeds were imported during 1919 for which certificates of pure breeding were issued.

#### Stallion Registration Board.

On July 31, 1919, there were 435 registered stallions in California compared with 590 in 1918; of these 140 were Percheron, 21 Standard, and Belgian. Jacks numbered 148 compared with 173 the previous year, a decline of 25. The total number registered was 583 compared with 763 in 1918, or a falling off of 180. The leading counties in registered stallions were San Joaquin 22, Tulare 20, Los Angeles 15, and Fresno with 12.

#### Asses and Burros.

In 1832, Henry Clay, who was a great advocate of the use of mules, brought the first pure-blooded Catalonian jack to Kentucky, and from then until the civil war quite a number of jacks were imported. With the revival of business after the war, there was a great demand for jacks, and they were imported from all the Mediterranean countries.

Until this time there had been but two breeds of asses generally recognized in this country, Maltese and Spanish. The importations into Tennessee and Kentucky have resulted in the production of the native type that is regarded by some breeders as better than any now imported.

There are also a large number of small donkeys, or burros, descendants of the small asses brought into Mexico and New Mexico at the early settlement of that section by the Spaniards, and are used principally by the Spanish and Mexican element. They are most useful in the mountainous sections.

#### CATTLE.\*

Cattle not being native to America, there are no strictly American breeds, but owing to difference in climate, care and ideals of American breeders, the European breeds which have been brought to America have changed to some extent.

#### Neat Cattle.

The Shorthorns, Herefords, and Aberdeen-Angus comprise practically all of the pure-blooded cattle in the United States used for breeding and for grading up native cattle for beef purposes.

\*For list of Breeders' Associations, see Appendix C.

### Working Oxen.

In the early days oxen were largely employed in farming operations. In 1860 they numbered upward of 26,000, but the number declined rapidly during the next ten years, and after 1890 they dwindled away.

### Beef Breeds.

The breeds of beef cattle in the United States are the Shorthorn (sometimes called Durham), Polled Durham, Hereford, Aberdeen-Angus, and Galloway. Each of these breeds has been carefully developed for a long period of years, with the result that individuals transmit their characters very readily when bred to native or scrub cattle. With somewhat frequent exceptions in the case of Shorthorns, the cows of these breeds are not heavy milkers, and in this point lies their success as beef cattle, for the milking tendency is associated with a conformation of body which prevents the animal from yielding the greatest quantity and the best quality of beef. The beef breeds have been bred for the maximum production of beef, and only enough milk is desired to nourish and produce a good, thrifty calf. They are most popular with farmers or ranchers who raise a considerable number of cattle.

*Shorthorn.*†—The Shorthorn is the most popular of the beef breeds in the United States, as shown by their numbers and by their general distribution over all parts of the country. They have a great range of adaptability and do well everywhere. The milking qualities, combined with the high standard as a beef animal and the gentle disposition, have caused the Shorthorn cow to be termed "the farmer's cow." The three important strains of Shorthorn cattle have been the Booth, the Bates, and the Scotch tribes. The Booth and Scotch strains represent the true beef type of Shorthorns, while the Bates approaches the dual-purpose type. The Shorthorn is the largest breed of beef cattle.

The color of this breed may be red, red and white, pure white, or roan. No other breed of cattle has the roan color, therefore this color in any other cattle usually signifies the presence of some Shorthorn blood.

The dual-purpose breeds are a class of cattle which have been developed to produce a fair to good quality of beef, and at the same time the females should give a good flow of milk.

*Polled Durham.*—The Polled Durham is a polled Shorthorn. There are two general divisions of this breed, the "single standard" and the "double standard." The single-standard Polled Durhams were produced by breeding "muley" cows to Shorthorn bulls, selecting the polled offspring and breeding these to other Shorthorn bulls.

The double-standard Polled Durhams were secured by using purebred Shorthorn cows that were either natural muleys or had undeveloped horns, for breeding to Shorthorn bulls. The double-standard Polled Durhams are purebred Shorthorns and can be registered in either the Shorthorn or the Polled Durham herdbooks.

This breed is similar to the Shorthorn in every way except that it is hornless. It is a comparatively new breed of cattle, and has not become so popular as the older breeds, but it is increasing in popularity.

†These are the leading breeds in California.

*Hereford.*†—The Hereford ranks next to the Shorthorn in numbers in the United States. Their popularity is constantly increasing, especially where cattle are raised under range or adverse conditions. The Hereford cows have been criticised because of their scanty milk flow, but they usually produce enough to raise a good calf. As a breed they have a better heart girth, stronger constitution, and can withstand adverse conditions better than the Shorthorns. They are early maturing and fatten readily in the feed lot.

In color the Hereford is red with white markings. The white markings usually consist of a white face and head, the white extending along the top of the neck and shoulders, a white throat and dewlap, and white on the underline. Frequently, however, no white is found on the neck or top of shoulders.

*Polled Hereford.*†—The Polled Hereford is a new breed developed by selecting and breeding Herefords which showed polled characteristics. The double-standard Polled Herefords are purebred Herefords which are hornless and are eligible to registry in either the American Hereford herdbook or the American Polled Hereford record. They differ in no way from the Hereford except that they have no horns. The polled feature has been well fixed and the bulls when mated with native cattle sire few calves having either long scurs or horns.

*Aberdeen-Angus.*†—Aberdeen-Angus cattle are solid black in color and have no horns. These characteristics are so strongly developed that a bull, when bred to horned cows of various colors, will usually produce calves of which 85 per cent or more are black in color and hornless. Occasionally a red animal is found in this breed, but the color is not popular among breeders. While the Aberdeen-Angus is an old breed, it is only within recent years that it has been so popular in the United States. While they are good rustlers, they have never been as popular on the ranges of the west as either the Hereford or the Shorthorn. They stand next to the Hereford and above the Shorthorn as grazers on scanty pastures. This breed is extremely valuable for grading up native cattle, but they have been criticized to a certain extent by rangemen because they do not get a greater percentage of calves. This has usually been true where they have been in a herd with horned bulls. If all the bulls were either polled or dehorned there would doubtless be less ground for this claim. The milking qualities of the cows are only fair; they give more milk than the Hereford, but not as much as the Shorthorn. A sufficient quantity of milk is produced to raise a good calf.

This breed is very early maturing, and has a tendency to fatten well at any age, hence their popularity for producing baby beef.

*Galloway.*—The Galloway is one of the oldest breeds of cattle. They are polled, solid black in color, though occasionally some brown is shown, and have a long, curly, silky coat. This breed is very prepotent and transmits the black color and polled characteristics readily to offspring from cows of any color. As high as 90 per cent of the calves from various-colored cows are black, and from 95 to 99 per cent of the offspring from horned cows are polled. This breed is slow maturing, when compared to the Aberdeen-Angus or the Hereford. In size they are smaller than any of the other beef breeds.

†These are the leading breeds in California.

*Red Polls.*—The Red Polled cattle originated in England and were introduced into this country in 1873, but few importations were made until about 1885. Since that time many have been imported. This is strictly a dual-purpose breed, and approaches the ideal of the dual-purpose type. In size they are smaller than the beef breeds, and have not the thick covering of flesh.

The Red Polls are more nervous than the Shorthorn, but less so than the Aberdeen-Angus. As this is a comparatively young breed, they are not so popular as the older breeds.

*Devon.*—This is one of the oldest breeds of cattle. They were introduced into this country at an early date and became popular in New England and in parts of Virginia nearly a century ago. The cows were good milkers, and the steers were used as work oxen or for beef, and filled either place admirably. They are exceedingly good rustlers, are vigorous, hardy, withstand both heat and cold well, and are very prepotent. For these reasons they were popular with the people of New England. They are slower of growth than any of the beef breeds except the Galloway. Their endurance, intelligence, and their gameness have made them popular as work oxen wherever they have been tried—no breed excels them in this respect.

*Brahman* or "*Indian*" *Cattle.*—Under the names of Brahman, "*Indian*," or Zebu cattle are classified a number of different strains of cattle of the species *Bos indicus*. Some of these strains vary so in type, color, size, and habitat that they are classified as separate breeds. The most important breeds of these cattle are the Krishna Valley and Hissar breeds. These cattle are classed as dual-purpose animals, as many of the females give a good quantity of milk. They are used quite generally in India as milch cows, and are more satisfactory than any other breed of cattle under the severe conditions of drought, heat, insect enemies, etc.

Although they are of a different species from our common breeds of cattle, they cross readily with them.

#### Dairy Cattle.

In the United States five breeds of dairy cattle have attained considerable prominence, namely, the Ayrshire, Brown Swiss, Guernsey, Holstein-Friesian, and Jersey. These breeds have been developed carefully for a considerable time for the purpose of dairy production, and in consequence each transmits its characteristics with regularity to its offspring. Certain distinct features distinguish each breed from the others, but all possess ability as milk producers.

*Ayrshire.*†—The Ayrshire breed originated in the County of Ayr, in southwestern Scotland. In that region, which borders on the Irish Sea, the surface is rolling and has much rough woodland. Pastures, therefore, are somewhat sparse and it is necessary for animals to graze large areas in order to obtain sufficient feed.

It is only within the last hundred years that Ayrshires have had a type well enough established to be entitled to the designation of breed. No exact account of the different infusions of blood of other breeds into the native Scotch cattle to form the Ayrshire breed is at hand.

†These are the leading breeds in California.

It is probable, however, that the Channel Islands, Dutch, and English cattle were all represented. The first importation of Ayrshires to this country was made in 1822, since which time there have been frequent importations into both the United States and Canada. New England, New York, and Pennsylvania probably contain the largest number of representatives of the breed.

*Brown Swiss.*†—The Brown Swiss breed originated in the Canton of Schwyz, in eastern central Switzerland. The cattle are called variously Brown Switzer, Brown Schwyzer, and Brown Swiss, the last name being the one commonly used in the United States. Conditions in Switzerland are such that a strong animal capable not only of milk production but of service as a draft animal is desired, and the large frame is evidence of fitness for these requirements.

The first importation into the United States was made in 1869, and although other importations have been made since, comparatively few animals have been brought to this country.

*Guernsey.*†—The Guernsey breed had its early development on the Channel Islands of Guernsey and Alderney, and at present cattle from either island are eligible to registry in the herd book of the American Guernsey Cattle Club. The origin of the breed is obscure, but it is probable that the parent stock came from Normandy, France, which is adjacent to the islands. Early live-stock laws of the islands prevented the importation of live stock for any purpose except slaughter, and under these conditions, in the course of the last century, the cattle developed into a distinct breed.

The climate of the Channel Islands being mild throughout the year, allows a long grazing season. Because of the high price of land for market-gardening purposes, the cows are tethered on pasture to avoid waste of feed. Although they come from the same parent stock, Guernseys differ from Jerseys in having been developed by men who had somewhat different ideals. The Guernsey of today is larger than the Jersey, and differs in other respects. The first representatives of the breed were imported in the early part of the nineteenth century. There is some resemblance between the Guernsey and the Jersey, but the former is larger and slightly coarser-boned, with a deeper and more "rangy" body. The head also is somewhat longer and more narrow than that of the Jersey.

*Jersey.*†—The island of Jersey, the largest of the Channel Islands, is the native home of the Jersey breed of cattle. Except for immediate slaughter, no cattle have been landed on the island since 1779, so that ever since that time the purity of the breed has been preserved. It seems probable that the foundation stock is the same as the Guernsey, namely, from Brittany and Normandy, in nearby northwestern France. Conditions on Jersey are similar to those on Guernsey. The breeders on the island have developed cattle that, in addition to productive ability, have uniformity of type and natural beauty, while in America the breeders have developed greater size, with less refinement of features.

Jerseys were first imported into the United States about the middle of the last century, and since that time importations have been made

†These are the leading breeds in California.

practically every year. The breed probably has the largest numbers and widest distribution of all the dairy breeds in this country. Large numbers of Jerseys may be found throughout New England, the Middle West, the South, and the Southwest.

Jerseys are the smallest of the dairy breeds.

*Holstein-Friesian*.†—In the low countries bordering on the North Sea, especially in the northern part of Holland, Holstein-Friesian cattle have been bred for centuries. The land is rich and fertile and pastures are exceptionally good. Different names have been used to designate the breed, both in Europe and America, among which the following are the more common: North Hollander, Holland, Netherland, Holstein-Friesian, Dutch, Dutch-Friesian, and Holstein. The last is the name usually used in this country, although Holstein-Friesian is the official name.

The Dutch settlers in the State of New York probably were the first to import individuals of the Holstein-Friesian breed, but the first importations of which records exist were made between 1857 and 1862 by Mr. W. W. Chenery, of Massachusetts, and many of our present-day animals are descended from these importations.

The Holstein is the largest of the dairy breeds.

From the point of view of milk production Holsteins average higher than any other breed. The percentage of butterfat, however, which averages lower than that of any other dairy breed, tends to counterbalance the advantage of greater production.

#### SHEEP.

In 1565, Spanish sheep were introduced into Florida, and those in that state today preserve traces of their Spanish origin. In 1773 they were introduced into California, and under the care of the Missions rapidly increased until, in 1825, it was estimated that seventeen of these Missions, extending from San Diego to San Francisco, held an aggregate of 1,003,970 sheep, exclusive of flocks owned by ranchers.

Sheep of which at one time there were very large flocks, have fallen off since the year 1880, when they numbered 4,152,349; in 1910 there were 2,417,477, or a decrease of 1,734,872 since the former year.

All the domestic sheep in America have originated from importations, most of which have been made from European countries since the beginning of the nineteenth century.

The better known breeds can be grouped into three classes:

The middle wool class includes Southdown, Shropshires, Hampshires, Oxords, Dorsets, Cheviots, Suffolks, and Tunis.

The long wool class included the Cotswold, Leicester, and Lincoln breeds and the Romney Marsh.

The fine wool class includes the American Merino and the Rambouillet. The various strains of Merinos formerly known by numerous names are now grouped into three types, A, B, and C.

The Southdown\* is of the middle wool breeds, and is probably the oldest breed of sheep in existence, and is also the mutton sheep above all.

The Shropshire\* is the most widely known and bred of the "down" breeds in America, and is the most popular of medium wool sheep.

†These are the leading breeds in California.

\*These are the leading breeds in California. For list of Sheep Breeders' Associations, see Appendix C.

**Other Long Wool Breeds.**

Other long wool breeds are the Romney Marsh,\* or Kent, the Wensleydale, Devon Long Wool, and Corriedale,\* a breed developed in New Zealand.

**Fine Wool Sheep.**

All fine wool sheep are descendants of earlier Spanish stock. The American Merinos have been bred nearly altogether for wool. Some breeders of the Delaine, or C type Merino, have bred to some extent for a mutton carcass, in addition to fineness and length of wool. In the case of Rambouillet there has been a great effort to improve the mutton qualities. A common characteristic of all Merinos and Rambouillets is the fineness of the wool.

The American Merino\* A, B, and C type.

The Rambouillet\* is the largest and strongest of fine wool sheep, or Merino breed, and was developed by the French government between 1783 and 1799 in order to secure a domestic supply of wool. They were first introduced into the United States in 1840.

The Hampshire,\* with possibly one exception (the Oxford), is the largest of the down breeds, and it is excelled in size only by the Lincoln and Cotswold among the long wools.

The Oxford Down\*—the blood of the Hampshire and Cotswold was used in forming this breed. It is the largest of the medium wool breeds.

The Dorset Horn\* is an extremely old breed like the Southdown, and is of the middle wool type, and medium sized, and probably the most fertile of all the mutton breeds.

The Cheviot\* is a mountain breed sheep, and an extremely old one, rather small and hardy. The mutton is of good quality.

Other middle wool breeds:

The Suffolk Down is comparatively a new breed of sheep and was first imported into the United States in 1888.

The Tunis comes from Northern Africa, and the wool is white, brown, reddish or mixed in color. The American Tunis has been improved by an infusion of Southdown blood, and the fat tail of the original has been greatly reduced.

**Long Wool Breeds.**

The long wools, bred chiefly for mutton, are the largest breed of sheep and with very broad backs.

The Cotswold\* is a big-bodied rather tall sheep, and with the exception of the Lincoln, is the largest breed of domesticated sheep. It has become famous in Australia, South America, South Africa, and the United States and Canada.

The Leicester\* is very easily distinguished from the other long wools by its lean and strong face. Practically all the Leicesters in America today are of a modified border type.

The Lincoln\* is shorter and more compactly built than the Cotswold.

There are many other varieties of sheep but little known in the United States, such as the Welsh Mountain, Exmoor Horn, the Ryeland, the Kerry Hill (a Welsh breed), the Shetland, which are deer-like in

\*These are the leading breeds in California. For list of Sheep Breeders' Associations, see Appendix C.

appearance, and are only suitable for a park, the Dartmoor, Black-faced Highland and others.

In furtherance of the work of its textile department, Leeds University some time ago purchased a small flock of wild Soay sheep, the most primitive breed of the British Isles, and has set itself to preserve it, as, in the opinion of Prof. Ewart, of Edinburgh University, the time will come when the fancy sheep breeder will have to return to the primitive breeds of sheep for stamina, and it would be a great misfortune for Great Britain if such primitive breeds were not available.

Unfortunately sheep which can take a 10-foot fence, as well as creep through one, and climb, are more than difficult to retain within bounds, and the university is still in need of safe pasturage for its small flock.

#### Wool, Mutton and Dogs.

Wool and mutton are commanding higher prices than ever before, and supplies of wool are being depleted so rapidly that it will take some time after peace is declared to restock the wool trade.

The sheep-killing dog constitutes one of the greatest menaces to the success of the sheep industry.

The dog not only kills sheep but keeps out of the sheep business men who are otherwise inclined to engage in it.

The most effective method of dealing with the sheep-killing dog is through efficient legislation.

Notable progress has been made by several states in enacting good dog laws, and others are expected to take similar action.

No law, however well worded it may be, can be effective unless it is enforced and has the moral support of the people who are affected by it. Uniform state dog laws are desirable.

The following statement shows at a glance the changes that have taken place in the number of domestic animals during the last sixty years:

Summary of the Number of Domestic Animals, 1850-1910.

Year	Horses and colts	Mules and colts	Cows and calves	Other cattle	Sheep and lambs	Swine
1850 -----	21,719	1,666	4,280	258,379	17,574	2,776
1860 -----	160,610	3,681	205,407	974,735	1,088,002	456,396
1870 -----	192,273	17,533	164,093	467,305	2,768,187	444,617
1880 -----	237,710	28,343	210,078	604,966	5,727,349	*868,419
1890 -----	*455,073	*53,627	317,201	*1,291,217	3,373,036	*594,000
1900 -----	421,293	96,190	307,245	*1,137,379	2,803,509	598,336
1910 -----	463,886	69,761	467,332	1,609,693	2,417,477	766,551

Prior to 1890, asses and burros were included with mules.

\*Including estimated number of range animals separately reported.

#### GOATS.

The Angora goat, a native of Asia Minor, was introduced into this country in 1849, and has been bred extensively in the United States. It crosses readily with the common goat, and the cross-breed frequently becomes the foundation of a good flock of fleece-bearing animals. The common goat has often been described as the poor man's cow. The Angora goat has been found to be of great service in clearing land of brush and low growths that sheep and cattle will not touch. The meat

\*These are the leading breeds in California. For list of Sheep Breeders' Associations, see Appendix C.

of the kids is said to be fully equal to the best young lamb, from which it is difficult to distinguish it. Angoras are among the most useful of domestic animals. Their fleeces, called the mohair, furnish material for the manufacture of some of the finest fabrics, their flesh is exceedingly delicate and nutritious, and their milk is richer than that of a cow.

The number of goats of all kinds in 1910 was 138,000, the lead being taken by Tehama County, with 28,000, and Shasta, with 18,000. Lake and Mendocino counties lead in Angora goats, having upward of 5,000 each.

#### Selection of Goats for the Range.

The goats on the ranges today are generally of two breeds—the Angora and the common, which is sometimes called the Mexican or Spanish-Maltese. In certain places near ranches a few head of the true milch breeds graze on the range. The Angora is by far the most important on the ranges both in numbers and the value of its products, and without doubt the principal increase in goats on the ranges will be in Angoras.

The production of milk goats has for a great many years been an important feature of the live-stock industry in many European countries, but it has never secured a very strong foothold in the United States. In this country the goat has always been an animal of more or less ridicule, as the majority of the people do not realize the possibilities of certain breeds or types that have been bred for many years along definite lines.

In continental Europe milk goats are largely used by families unable to keep a cow, and great benefit is derived from having fresh milk at hand and at a low cost.

During the past several years considerable interest has been manifested in the milk-goat industry in this country. The fact that the milk-goat will supply sufficient milk for the average family and can be kept where it would be impossible to keep a cow is beginning to appeal to many people, especially those living in the small towns and the suburbs of the large cities.

#### Breeds of Goats.

*Saanen*.—The Saanen is one of the leading breeds and takes its name from the Saanen Valley of Switzerland. It is said to be the largest of all the Swiss breeds. Although considered a hornless breed, occasionally an animal is found with horns. The color ranges from a pure to a creamy white. The dairy conformation is especially well developed in the Saanen breed. The hair is usually short, with the exception of a strip along the spinal column extending to the flanks and the hind quarters.

The first record of the importation of Saanen was in 1904, when 10 head came in through the Canadian quarantine.

The Saanen is without question one of the most beautiful and valuable breeds, and as the supply of pure-breeds is very limited in this country it will be necessary to grade up herds from common stock by using Saanen bucks of the best breeding obtainable.

*Toggenburg*.—The Toggenburg is one of the leading breeds of Switzerland and takes its name from the Toggenburg Valley, where they have been bred for a great many years. Although generally considered a hornless breed, occasionally one is found with horns. The color of the

Toggenburg is brown with a light stripe or bar down each side of the face. The legs below the knees and hocks are light gray or almost white. The wattles or appendages, two in number, attached to the under side of the neck, are very characteristic of this breed.

The first record of importations of the Toggenburg into the United States was in 1893, when W. A. Shafor, of Hamilton, Ohio, imported 4 head from England. In 1904 F. S. Peer imported from Switzerland for other persons 16 head, which later became widely distributed. The largest importation of milk goats ever made to this country was in 1905, when R. N. Riddle, of New Jersey, imported 119 Toggenburgs.

Owing to the fact that Toggenburg goats are more plentiful in this country than other breeds, a good many grade goats of the Toggenburg type are found in various parts of the country. In fact, many herds have been established by crossing Toggenburg bucks upon does of the common American type.

*Nubian.*—The Nubian, although considered a valuable breed, is found in but small numbers in this country. It is a native of Nubia, Upper Egypt, and Abyssinia. Its important peculiarities consist in the length of the large drooping ears and the shape of the head. The Nubian is considered a hornless breed, but bucks occasionally develop horns. It is one of the largest breeds of goats. The hair is short and fine, and owing to this condition this breed is less hardy than the leading European breeds and can not stand extreme cold. The color is black, dark brown, or tan, with or without white markings. Pure-bred Nubian bucks are said to be free, or nearly so, of the odor so prevalent in the males of other breeds.

The Nubian breed is very prolific and one of the best for milk production.

*Maltese.*—Although considered a valuable breed of milk goat, the Maltese is of no special importance at the present time in this country, except that it has had some influence on the type of goats in the Southwest. As the name signifies, it is a native of the Island of Malta.

This breed is kept in large numbers on that island. It is usually hornless, but occasionally one is found with horns. The ears are rather long and are carried horizontally. The udders are quite large and in many instances almost touch the ground. The hair is rather long, the color being white and reddish brown or black. For milk production this breed is considered one of the best.

*Common, or American.*—Either of the names "Common" or "American" may be applied to a large number of short-haired goats found in many sections of the United States, especially in the South. In many sections these goats have been bred for a great many years without the introduction of outside blood, so that in general conformation they are very uniform.

They are of medium size and somewhat short legged, rather meaty in appearance, and do not show the conformation of the Swiss breeds. This type of goats is of various colors; brown of various shades, brown and white, black and white, bluish gray, and white predominate.

Owing to the scarcity of good milk goats, the common or American type properly selected offers a good foundation for grading up with either the Toggenburg, Saanen, or Nubian breeds.

## Milk Goat Industry.

The milk-goat industry is only in its infancy in America. This type of goat is adapted to our country, and the industry should become of greater importance every year. There are many different breeds of milch goats, but comparatively few of these are represented in California, the largest number being the Toggenburg, Saanen and Anglo-Nubian. A great variety of crosses and numerous goats of no particular breeding are also found. The Toggenburg is at the present time the most numerous in this state. The first two are Swiss breeds; the latter from England, originally made up of the English goat, the Nubian and the lop-eared goats of India. This breed has been bred in England for many years. Homes Pegler, the best known authority on the milch goat, in his late book, "The Book of the Goat," has this to say: "The Toggenburg may be said to be the most popular breed of goat in England at this moment, as indeed it has been for some years. This is due to two important qualities—its great milking capacity and its docile, kindly nature. Any one visiting a herd of goats of various sorts amongst which there are Toggenburgs, will generally find that whilst the others move off at the approach of strangers, the Swiss will come up to be patted, and will feed readily from the hand. In regard to its milking qualities a great deal could be written."

## SWINE.

The swine introduced into the United States by the early colonists were of inferior stock. Between 1818 and 1830, the Chester White was evolved. The Berkshire was introduced from England about 1830, but did not come into general favor until 1870 to 1880. The Poland-China originated in Ohio between 1838 and 1840. Other breeds are Yorkshires and Hampshires. The interest in swine breeding in recent years is illustrated by the dates of first registration of the different swine breeders' associations, which were as follows: American Berkshire, 1875; Standard Poland-China, 1877; Central Poland-China, 1879; American Chester White, 1884; American Essex, 1887; American Duroc-Jersey and Standard White, 1890.

As a result of this interest, swine in this country have attained a high standard, with regard to form, bone, and line of maturity.

There are two distinct types of swine, the lard and the bacon types. Swine of the lard type far outnumber those of the bacon type in the United States. The lard type is preferred by the people in this country, consequently the majority of feeders produce the rapid fattening, heavily fleshed lard type.

The bacon type is not raised extensively in the United States. The production of choice bacon is more general in those countries where the feed of the hog is more varied and where corn is not relied upon as the principal grain for hogs.

The principal breeds of the lard type are the Poland-China, Berkshire, Chester White, Duroc-Jersey, and Hampshire.

The principal breeds of the bacon type are the Tamworth and the Large Yorkshire.

Pork constitutes more than one-half of all the meat produced in the United States, and it is the mainstay of the ration of the laboring man and the soldier.

## RECOGNIZED BREEDS OF DOMESTIC ANIMALS.

## Cattle.

Aberdeen-Angus.	Guernsey.	Kerry and Dexter.
Alderney.	Hereford.	Red Polled.
Ayrshire.	Highland.	Shorthorn.
Devon.	Holstein-Friesian.	Sussex.
Galloway.	Jersey.	Welsh.

## Sheep.

Cheviot.	Kerry Hill.	Shropshire.
Cotswold.	Leicester.	Southdown.
Dorset Horn.	Leicester [Border].	Suffolk.
Hampshire Down.	Lincoln.	Wensleydale.
Kent or Romney Marsh.	Rambouillet.	Oxford Down.

## Hogs.

Berkshire	Hampshire	Mulefoot
Chester White	Poland-China.	Yorkshire
Duroc-Jersey.	Tamworth	Essex

## Dogs.

Name of breed	Book of record
Belgian (Griffon Bruxellois, Schipperke, Chien de Berger Belges).....	Livre des Origines Saint-Hubert
Fifty-seven recognized breeds.....	Kennel Club Studbook
Foxhound.....	Foxhound Kennel Studbook
Greyhound.....	Greyhound Studbook
Harrier and Beagle.....	Harrier and Beagle Studbook
Swiss.....	Schweizerisches Hunde-Stammbuch
German Shepherd.....	Zuchtbuch für Deutsche Schäferhunde

Provided that no dog or dogs registered in the above-mentioned books shall be certified as pure bred unless a three-generation certificate of pedigree issued by one of the above-mentioned societies is submitted for each dog.

## Cats.

Name of breed	Book of record
Long-haired and short haired.....	Register of the
Governing Council of the Cat Fancy, 65-66 Chancery Lane, London, England	

The Canadian National Records for dogs are recognized for all the breeds registered in said records; provided, that no dog or dogs registered in said records shall be certified as pure bred unless a three-generation certificate of pedigree, issued by the said Canadian National Records, is submitted for each dog.

## \*WOOL, 1915 - 1919.

The following estimates are taken from the annual report of the National Association of Wool Manufacturers, Boston:

	1915	1916	1917	1918	1919
Number of fleeces.....	1,900,000	1,850,000	1,740,000	1,792,000	1,780,000
Average weight of fleeces, pounds.....	6.1	6.3	7.0	7.0	7.4
Per cent of shrinkage.....	64	64	64	64	64
Wool product, raw, pounds.....	11,590,000	11,600,000	12,180,000	12,145,000	13,172,000
Equivalent quantity of scoured wool, pounds.....	4,172,000	4,176,000	4,384,000	4,526,200	4,741,920
Average value per scoured pound, October 1.....	\$0.65	\$0.83	\$1.50	\$1.50	\$1.15
Total value October 1.....	\$2,711,800	\$3,466,080	\$6,576,000	\$6,789,300	-----

\*Number of fleeces.

The comparative prices of California wool at Boston has been as follows on the scoured basis, per pound:

**\*PRICES OF WOOL (Oct.), 1905 - 1919.**

(Scoured Basis.)

Year	Cents*		Year	Cents*	
	Spring Northern, free, 12 months	Fall, free		Spring Northern, free, 12 months	Fall, free
1905	74	62	1913	48	40
1906	70	60	1914	53	45
1907	68	58	1915	65	55
1908	50	40	1916	80	57
1909	70	53	1917	\$1.75	\$1.40
1910	55	45	1918	1.75	1.50
1911	48	40	1919	1.65	1.15
1912	54	45			

\*67 per cent spring, 33 per cent fall.

**CALIFORNIA WOOL PRODUCTION, 1905-1918.†**

(Commercial estimates. Duty—Free on and after December, 1913.)

Year	Pounds	Year	Pounds
1905	22,000,000	1913	11,200,000
1906	24,000,000	1914	11,480,000
1907	15,750,000	1915	11,590,000
1908	14,560,000	1916	11,600,000
1909	15,000,000	1917	12,180,000
1910	13,500,000	1918	12,145,000
1911	12,000,000	1919	13,172,000
1912	11,900,000		

†For the California wool production from 1854-1903, see Report for 1913, page 67. The imports of wool are given under so many classifications of camel, goat, alpaca, etc., unmanufactured and manufactured, that space will not allow the details to be given here

**MOHAIR.**

As no official statistics of the production of mohair in this country are available, we must rely upon estimates by the largest users in the country who place it this year at 8,000,000 pounds, double the production of 1910 and an increase of 2,000,000 over the estimate of 1918.

Under the encouragement of a 15 per cent duty the production of mohair has probably increased, especially in Texas. The total production for 1919 in the United States, is estimated at 8,000,000 pounds, which is 2,000,000 pounds higher than the four previous years. Texas, Oregon, New Mexico, California, and Arizona are the principal sources of supply of domestic mohair.

**Mohair Production in the United States.**

United States Census Reports and Commercial Estimates.

Year	Fleeces	Weight of mohair, pounds
1900	454,932	961,328
1910	1,682,912	3,778,706
1912		*4,000,000
1913		*4,500,000
1914		*4,500,000
1915		*6,000,000
1916		*6,000,000
1917		*6,000,000
1918		*6,000,000
1919		*8,000,000

\*Commercial estimate.

## NUMBER AND VALUE OF FARM ANIMALS IN CALIFORNIA, 1880-1919; IMPORTS AND EXPORTS 1909-1919.

NOTE.—The imports and exports for animals is for the fiscal year ending June 30.  
(Compiled from the reports of the United States Department of Agriculture.)

## SUMMARY OF DOMESTIC ANIMALS IN CALIFORNIA, 1919.

The winter of 1918-19 was generally favorable to the stockmen, and stock returned from the summer ranges in fair to good condition of flesh. The absence of the usual late fall and winter rains brought about more or less serious conditions in many counties, and considerable apprehension as to the immediate future.

*Horses.*—The Census Bureau counted 469,000 horses of all ages in 1910. A gradual increase in numbers was noted until 1915, since then the decrease has been rapid, a drop from 503,000 that year to 400,000 January, 1920.

*Mules.*—The number of mules in California has never been large, and followed the same trend as horses—slowly increasing to a maximum of 74,000 in 1915 followed by a more rapid decline to the present number. The development of the small orchard and vineyard tractor has eliminated many mules from the farm.

*Milk Cows.*—From 467,000 milk cows counted by the census in 1910, a regular increase in number was noted for about 8 years when high feed costs with a depleted supply of high priced labor caused a sudden slump in the total number. The present year, however, indicates an upward turn again.

*Other Cattle.*—Only one per cent decrease in the number of cattle other than milk cows compared with one year ago is disclosed by reports from regular correspondents, cattlemen and others. The total number, 1,634,000 compared to 1,608,000 in 1910, indicates only 1.6 per cent increase in ten years.

“Join the California Cattlemen’s Association” is a good slogan for the cattle grower as it means greater cooperation in breeding, ranging and marketing problems, all of which tends toward an increase in numbers, better times for the cattlemen and cheaper beef for the consumer.

*Sheep.*—From 2,417,000 sheep in 1910 the number has jumped to 2,972,000 in 1920. Present conditions seem a little more favorable to the wool grower than to the cattle grower, but there has been more or less shifting of flocks on account of feed.

Unquestionably every owner of sheep can help himself and the industry by becoming a member of the California Wool Growers’ Association.

*Swine.*—About 27 per cent more swine in California than ten years ago, or 767,000 head in 1910 as compared with 973,000 in 1920, is indicated by the count of pigs’ noses on January 1. This is 3 per cent less than one year ago. Prices obtained by procedure the past season were somewhat less, while feed costs were higher.

The work of the farm bureaus in stimulating swine production by means of pig clubs and community auction markets has brought about considerable improvement in quality and prices, and doubtless is the principal reason for the great increase in number.\*

\*U. S. Field Agent for California, Bulletin.

## PART IV.

## POULTRY, DAIRY PRODUCTS, BEES AND HONEY.

Varieties of Poultry; Turkeys, Guinea Fowls, Ducks, Geese, Ostriches; Dairy Products, Eggs, Cheese and Butter; Condensed and Evaporated Milk 1914-1919; Production of Butter and Cheese by Counties 1917-1919; Production of Honey, 1909-1919; Imports and Exports of Honey and Beeswax, 1909-1919.

## POULTRY.

"One hundred hens on every farm—one hundred eggs from every hen," is the motto of the United States Department of Agriculture. Meat can be produced from poultry more quickly than from any other source.

With the exception of the turkey, all the different species of poultry now kept on American farms are of European or Asiatic origin. The fowl, or chicken, is unquestionably of Asiatic origin.

## Varieties.

The chickens of the United States may be divided into the following classes:

*The American class includes the—*

Plymouth Rock  
Wyandotte  
Java  
American Dominique  
Rhode Island Red  
Buckeye.

*The Asiatic class—*

Brahma  
Cochin  
Langshans

*The Mediterranean class—*

Leghorn  
Minorca  
Andalusian  
Spanish  
Anconas

*The Polish class—*

White Crested  
Black  
Golden  
Silver  
White and Bearded Golden  
Bearded White  
Bearded Silver  
Buff Laced

*The Dutch or Hamburg class—*

Hamburgs

*Continental—*

Silver and Gold Campines

*French class—*

Houdans  
Crevecoeurs  
La Fleche

*Game and Game Bantam class—*

Black-breasted Red  
Brown Red  
Golden and Silver Duckwing  
Red Pyle  
White, Black, Birchen, Cornish, and  
Indian Games  
Malays

*Bantams other than Game—*

Sebrights.  
Rose Combed  
Booted  
White  
Cochin  
Japanese  
Polish

*English class—*

Dorkings  
Orpingtons  
Red and Speckled Sussex  
Red Cornish  
Red Caps

*Miscellaneous class—*

Russian  
Sumatra  
Silky  
Sultan  
Frizzles  
Rumples  
Yokohama  
Naked Neck

Classified according to their prominent characteristics, they may be divided into four classes. The egg breeds, which are the greatest egg producers, are the Leghorns, Spanish, Minorcas, and Hamburgs.

The meat breeds, whose chief value is as meat producers: Brahma, Cochin, and Langshan. The general utility fowls furnish fair quantities of eggs and meat. The Plymouth Rock and Wyandotte belong to this class.

The fancy breeds are reared chiefly on account of their appearance: the Polish, Games, Bantams, and some miscellaneous breeds are the chief representatives of this class.

For general purposes the Plymouth Rock and Wyandotte are the most popular of all fowls, the Plymouth Rock in particular being in great favor. Hens of the medium-sized breeds—Plymouth Rocks, Wyandottes, Rhode Island Reds and Orpingtons—are best suited to back-yard conditions. Large hens kept in close confinement are likely to get too fat to lay well.

The American class includes the Plymouth Rock, Wyandotte, Java, Dominique, Rhode Island Red, and Buckeye.

The fowls of these breeds are commonly called general-purpose fowls, because they are not only good egg producers but their carcasses are also well suited for the table. They are therefore the breeds best suited for the general farm flock, and include some of the most popular and widely kept varieties of chickens. They are in good favor with the poultry packers on account of their table qualities.

All the American breeds lay brown-shelled eggs. They all have yellow skins and shanks free from feathers, which are desirable qualities for table fowl in this country.

In size they are intermediate between the smaller egg breeds, such as the Leghorns, and the larger meat breeds, such as the Brahmas. In temperament they are also intermediate, being less active than the egg breeds but more so than the meat breeds. They are fairly good foragers.

They mature earlier than the meat breeds, but not so quickly as the egg breeds.

They are sitters and make good mothers. Where they are kept, natural methods of incubation and brooding can therefore be used.

To meet these demands the farmer therefore desires a breed or variety of chickens which are not only good layers, but also have size enough to provide suitable carcasses for the table. The breeds which meet these two demands are commonly called the general-purpose breeds, and in the main are those comprising the American class as given in the American Standard of Perfection. The Orpington, belonging to the English class, is also a well-known general-purpose breed in this country. The general-purpose breeds are undoubtedly the most popular breeds in the United States. Certain of these, namely, the Plymouth Rocks, Wyandottes, Rhode Island Reds, and Orpingtons, compose the bulk of pure-bred poultry kept on the general farms, and their blood is evident in most of the farm flocks.

All these birds are layers of brown eggs. In consequence, they are not as suitable for conditions where a premium is paid for white eggs; under such conditions where large poultry farms have been established, the White Leghorn has come to be the most popular fowl.

All the American breeds are clean legged; that is, they have shanks free from feathers. They also have yellow legs and skin, except the Java, in which the legs are black or leaden blue and yellow. In the markets of the United States the former is a desirable point, as the demand is for yellow skin and legs in table fowls.

#### Breeds and Varieties.

The American class includes the following standard breeds and varieties:

BREEDS.	VARIETIES.
Plymouth Rock-----	Barred, White, Buff, Silver Penciled, Partridge, Columbian.
Wyandotte -----	White, Buff, Silver, Golden, Partridge, Silver Penciled, Columbian, Black.
Java -----	Black, Mottled.
Dominique.	
Rhode Island Red-----	Single Comb, Rose Comb.
Buckeye.	

*The Plymouth Rock.*—The Plymouth Rock has been for years the most popular breed in the United States. The Barred Plymouth Rock was the original variety and was developed in the United States, various lines of blood being used in the making. It is probable that the Dominique, the Black Cochin, the Black Java, the Brahma, and the Pit Game were used for this purpose. The size and type or shape of all the varieties of Plymouth Rocks are supposed to be identical.

The White Plymouth Rock is the second most popular variety of this breed. The Silver Penciled Plymouth Rock is one of the new varieties. Its plumage is distinctive and very beautiful. The Columbian Plymouth Rock and the Partridge Plymouth Rock are also a variety of comparatively recent origin, are very attractive in coloring and have proved quite popular.

*The Wyandotte.*—The Wyandotte is a rose-comb breed and is characterized as a breed of curves. The body is comparatively round and set somewhat lower on the legs than the Plymouth Rock. It is inclined to be a looser feathered breed, and its general shape and character of feathering gives it an appearance of being somewhat short backed and short bodied. The Wyandotte is a breed which also was developed in the United States, and has become very popular. The Silver Wyandotte was the original variety, and it is generally believed that the Dark Brahma, the Silver-Spangled Hamburg, and the Buff Cochin played a part in its origin. It is somewhat smaller than the Plymouth Rock. In the Golden Wyandotte the general color scheme is the same as in the Silver Wyandotte, except that the white of the Silver variety is replaced with red and reddish brown. The White Wyandotte is undoubtedly the most popular variety of this breed. In the Buff Wyandotte the color should be an even shade of buff throughout, being identical with that of the Buff Plymouth Rock.

*The Java.*—The Java is one of the oldest breeds developed in the United States. In general this fowl tends to be long in body and broad in back. The comb is single, and the legs of the Black variety are black, or black approaching yellow, while those of the Mottled variety are yellow and leaden blue. The color of the legs detracts somewhat

from the fowl for market purposes. The skin, however, is yellow. The hens are good layers of brown-shelled eggs, and the fowls are suitable for table purposes.

There are two varieties of Javas, the Black and the Mottled. The color of the Black Java is black throughout, with a greenish sheen on the surface plumage. Purple barring is undesirable. In the Mottled Java the plumage is a mottled black and white throughout, the black being more plentiful than the white. The undercolor of the Mottled Java, is slaty.

*The Dominique.*—The Dominique is also one of the oldest of the American breeds. The Dominique color is associated in the minds of people throughout the country with the barnyard fowl and is frequently confused with the Barred Plymouth Rock color. The Dominique is somewhat smaller and somewhat slighter in body, with a tail somewhat longer and sickles more prominent, than the other American breeds. This breed has a rose comb and yellow legs and skin. The hens lay brown-shelled eggs and are good table fowls, although somewhat smaller than the other general purpose breeds.

*The Rhode Island Red.*—The Rhode Island Red is one of the newer breeds which have been developed in this country. At the present time it bears an excellent reputation among the farmers and is kept very extensively throughout the farming districts. The breed originated in Rhode Island, where it was developed by the farmers engaged in poultry raising. The Malay, Buff Cochin, Buff Leghorn, and Wyandotte are said to have been used in its development.

*The Buckeye.*—The Buckeyes are an American breed of comparatively recent origin. In type they approach somewhat to the Cornish, being erect and broad-breasted. This breed has a pea comb, which doubtless comes from the Cornish blood used in originating it. The hens lay brown eggs. In color Buckeyes are mahogany bay.

The turkey is an American bird. The wild turkey was once found all along the Atlantic coast, throughout Mexico, Central America, and the great interior plains of North America. The recognized varieties of the domestic turkey are the Bronze, Narragansett, White, Holland, Buff, Slate, Black, and Bourbon Red.

*Guinea Fowl* are growing in favor as a substitute for game birds, with the result that guinea raising is becoming more profitable.

They are raised usually in small flocks on general farms, and need a large range for best results.

Domesticated guinea fowl are of three varieties, Pearl, White, and Lavender, of which the Pearl is by far the most popular.

Guinea fowl have a tendency to mate in pairs, but one male may be mated successfully with three or four females.

Guinea hens usually begin to lay in April or May, and will lay 20 to 30 eggs before becoming broody. If not allowed to sit will continue to lay throughout the summer, laying from 40 to 60 or more eggs.

Eggs may be removed from the nest when the guinea hen is not sitting, but two or more eggs should be left in the nest.

Ordinary hens are used commonly to hatch and rear guinea chicks, but guinea hens and turkey hens also may be employed successfully, although they are more difficult to manage.

Guineas are marketed late in the summer, when they weigh from 1 to 1½ pounds at about 2½ months of age, and also throughout the fall, when the demand is for heavier birds.

#### DUCKS.

The six leading varieties are the White Pekin, White Aylesbury, Colored Rouen, Black Cayuga, Colored Muscovy, and White Muscovy.

The most prominent breeds of geese are the Toulouse, African, Embden, Chinese, Wild or Canadian, Egyptian, East India, Gray Call, Buff, Swedish, Crested, and Runner.

#### POULTRY IN CALIFORNIA.

The raising of poultry in California is carried on successfully and on a large scale, the center of this industry being at Petaluma, in Sonoma County.

The poultry industry is constantly extending, as the demand for poultry products greatly exceeds the home supply. Turkey-farming, as it is called, is mainly in the grain districts where the fowls can range. Hatching by incubators prevails generally.

An average chicken ranch near Petaluma consists of about five acres, upon which are placed 500 to 3000 hens. There are, of course, quite a number of larger ranches which maintain 5000 to 30,000 chickens. A person should have from \$3,000 to \$5,000 to equip a chicken ranch and get ready for a profitable business. In case of renting, however, about \$1,500 is needed to start the prospective poultryman. The average profit on each hen is about \$1 per year.

Notwithstanding the remarkable development of the poultry business in various parts of the state, the increase is not sufficient to meet the demands of the market.

#### BREEDS OF PIGEONS.

Archangels, Barbs, Blondinettes, Carneau, Carriers, Dragoons, English Pouters, Exhibition Homers, Fantails, Helmets, Ice Pigeons, Jacobins, Long Face Tumblers, Magpies, Modenas Mondains, Nuns, Parlor Tumblers, Pigmy Pouters, Polish Lynx, Record Homers, Runts, Russian Trumpeters, Satinettes, Scandaroons, Show Homers, Strassers, Swallows, Owls, Taped Hungarians, Turbits, White Kings, Maltese.

#### BREEDS OF BELGIAN HARES AND RABBITS.

Flemish Giants, Belgian Hares, New Zealand Hares, Dutch Rabbits, American Giants, French Silvers, Himalayas, English, Angoras, Lop Ears, American Blues.

#### OSTRICH INDUSTRY.

There are ostrich farms at Pasadena, Sacramento, and Brawley, in Imperial County. More than thirty-five years ago the first ostriches were brought from Africa to California by Edwin Cawston and the ostrich farm at Pasadena established. An ostrich weighs as high as 300 pounds, and produces eggs which frequently weigh as much as five pounds. These huge ivory-colored eggs are sometimes hatched by the incubator process, or by the mates who take turns on the nest, the males at night and females during the day.

The question of the nature of the country most favorable for ostriches is largely affected by the kind of vegetation peculiarly suited to the soil, which in turn is undoubtedly affected by the amount of rainfall. Alfalfa pasture makes an ideal run for the birds, furnishing a large percentage of their food; hence a soil which is or can be made suitable for alfalfa is one of the essentials to success in ostrich farming. A dry sandy soil, made suitable by drainage and irrigation for raising alfalfa, has proved best adapted to successful ostrich farming. Such a soil is generally peculiarly adapted for raising large crops of alfalfa, and makes an ideal soil for an alfalfa pasture. Under such conditions it is essential to have some shade.

The demand for information concerning ostriches indicates that the number of individuals who are interested in ostrich farming is increasing.

The profit to be derived from the business will depend on the management, on the success secured in the raising of the young birds, and on the production of feathers of good quality. The average yearly yield of feathers from an ostrich is 1½ pounds. Birds produce from 12 to 20 ounces of feathers at each plucking, with an average of 16 ounces.

There were nine ostrich farms, returning 974 ostriches, valued at \$224,000 in 1910. There were also reported peafowls valued at \$1,431, pheasants valued at \$342, and India Jungle fowls valued at \$150. The number of farms reporting poultry increased 10,772 since 1900.

#### The South African Ostrich Industry.

Only a few years ago the ostrich was the most pampered and highly valued possession of many South African farmers. Now there is little interest even in the most perfect of these birds.

A pair of the best breeding ostriches easily sold for \$5,000. Super prime feathers (*i. e.*, perfect white wing feathers from the cock bird) brought \$120 to \$140 a pound on the public market in South Africa.

It was in the late sixties that the commercial aspect of the ostrich plume presented itself to the South African farmer. From a very small beginning the business developed into a trade amounting to millions of dollars annually, but met with a check in 1914. It is interesting to note that the totals of last year's sales were 234,967 pounds, valued at \$952,024, averaging \$4.05 per pound. During 1918 no prime feathers were sold, these being held by speculators for better times. It is said that one speculator who paid about \$50,000 for a lot of feathers seven or eight months ago sold the lot at a recent sale for \$150,000.

The ostrich farmers undoubtedly believe that feathers are again coming into their own, as good ostrich chicks are selling at high prices. One brood of chicks brought \$60.82 per bird. Adult birds are again selling at \$194.66 a pair and more. A year or so ago ostriches were neglected and thousands died off through lack of care.

Since the slump in the ostrich-feather market in that year, making it unprofitable to raise ostriches for their feathers alone, schemes have been devised in this country to minimize the losses to ostrich farmers, many of whom had no other capital than their flocks of these giant birds.

The eggs of the ostrich have long been a staple product on the market of Port Elizabeth and other ostrich centers, and have been mixed with hens' eggs by bakers in the manufacture of cakes and pastry.

#### DAIRY PRODUCTS.

Before the war the United States received dairy products from no fewer than 24 foreign countries; now these supplies have largely ceased and it has become necessary not only to replace them at home but also to export large quantities.

The greatest single item of our dairy exports is condensed milk, which now is meeting an unprecedented demand for both army and civilian consumption abroad. In 1914 the imports and exports of this commodity were about equal; that is, we imported about the same quantity we exported. Neither was a very important item in our trade. In 1914, 16,209,082 pounds of condensed milk were exported, but in 1919 this had increased to the enormous figure of 852,865,414 pounds, and the value for the same period increased from \$1,341,140 to \$121,893,337.

In the period before the war the major part of the dairy imports consisted of fancy cheese from Italy, Holland, France, Greece, and Switzerland. During 1914, 63,784,313 pounds of cheese were imported, while exports consisted of 2,427,577 pounds.

#### War Production Doubled.

In the four years 1916 to 1919 the total annual production of condensed and evaporated milk increased from slightly over 992 million pounds to over 2 billion, or more than 104 per cent. The tremendously increased demand for overseas shipment for our own armies and the Allies with contracts made on a "cost-plus" basis stimulated production to such an extent that the capacity of many factories was increased and many new plants were established.

Production and Exports of Condensed and Evaporated Milk.

Year	Production, pounds	Exports, pounds	Percentage exported
1914		16,209,082	
1915		75,689,584	
1916	992,364,000	219,686,127	22
1917	1,333,787,000	428,575,213	32
1918	1,675,934,000	551,139,754	33
1919	2,030,958,000	852,865,414	42

Evaporated milk was manufactured in 156 factories in 24 states in 1919 compared to 139 factories in 27 states in 1918. The States occupying the first 10 places in the production of unsweetened, evaporated milk, unskimmed, case goods, during 1919 and 1918 are listed in the order of importance.

Rank	1918		1919	
	State	Pounds	State	Pounds
1	Wisconsin	378,514,490	Wisconsin	280,690,026
2	Washington	126,091,712	Washington	132,489,371

\*The production of evaporated part or full skimmed milk modified with foreign fat is not included.

**Imports and Exports of Cheese, 1909 - 1919.**

The export trade in American cheese is as old as the nation. The earliest statistical record shows that 144,734 pounds were exported during the fiscal year ended September 30, 1790. For every year since then cheese appears as one of the staple foodstuffs in the export schedule.

By 1870 the production of farm-made cheese had practically ceased, its place being taken by factory cheese. The development of the factory system of cheese making in the United States greatly stimulated production in this and other countries.

After a century's honest growth, according to the United States Department of Agriculture, the decline of the domestic cheese trade following 1881 was undoubtedly started by the manufacturer of "filled" or "oleo" cheese which began in the central part of the state of New York about 1870. A filled cheese is defined as one in

which the butter content has been largely replaced by other fats. This adulterated product, made chiefly from oleo oil and skimmed milk, could be produced at that time for 4 to 5 cents per pound, or about one-fourth the wholesale cost of genuine American whole-milk cheese. Extensive advertising and large profits tended to increase the output which soon exceeded 1,000,000 pounds annually. A federal law of 1896 levied a tax on its production and required that records of production and exports be made.

The sales of this product, though profitable to a few persons for a short time, resulted in lasting injury to the entire domestic industry by ruining the reputation of all American-made cheese in foreign markets, extending practically to the present time. There is no record of the production of filled cheese in the United States since 1912.

In 1880 the United States was the greatest cheese-exporting nation in the world, but by 1913 the trend of the trade had changed so that 25.7 per cent of the world's export trade in cheese was held by Canada, 25 per cent by the Netherlands, 13.6 per cent by Switzerland, 12.5 per cent by Italy, 11.8 per cent by New Zealand, 6.4 per cent by France, and 5 per cent by all other countries, including the United States.

The United Kingdom imports more cheese than any other nation in the world and has always been the chief market for the American product. This valuable trade was gradually replaced by exports from Canada and New Zealand, following the introduction of filled or adulterated cheese in the exports from the United States.

The average annual consumption of cheese in the United States since 1850 has varied between 2 and  $4\frac{1}{2}$  pounds per capita, or less than one-third the average butter consumption. The average consumption of cheese during 1909 was less than 4 pounds per capita.

Commercial cheese comprises more than 100 distinct types. Italy alone produces more than 30 varieties. The milk of the cow is used principally in its manufacture, but the milk of sheep and goats is also largely used in many European countries, particularly Switzerland and Italy. Reindeer's milk is employed for cheese-making in Iceland, Lapland, and Norway.

With regard to annual world production, Cheddar is the most important of all cheeses.

The demand for imported cheese in the United States covers a great variety, embracing the products of many countries. From Italy, the greatest cheese-producing nation in the world in 1914 with an estimated output of 560,000,000 pounds, come the popular varieties known as Gorgonzola and Parmesan. From France come some of the finest cheeses made, including the Roquefort and Camembert. Considerable quantities of Neuchatel and Gruyere are also imported.

The Edam cheese from the Netherlands has long been a favorite in the United States, occupying a place of considerable importance in the imports of cheese.

## Imports and Exports of Cheese, 1909 - 1919.

## California Butter and Cheese in 1919.

The dairy statistics for California are of special interest in showing the development of the industry in different sections of the state. Twenty-five years have witnessed a remarkable change in the dairy map of the state. The dairy cows of the state have followed the water, that is, the irrigation water. Prior to that time the coast section was her exclusive source of dairy products. Humboldt ranked first in butter production. She was followed by Marin, Sonoma and San Luis Obispo counties. Today, with the exception of Humboldt, these counties are, in a sense, back numbers in the dairy industry of the state. Leading, by a big margin, is Stanislaus. Not only does her 7,846,382 pounds put her in the lead as a butter producer, but she also leads in cheese production, milk-sugar production and condensed milk. Humboldt county, mainly through increasing the average production of her dairy cows, rather than by increased numbers, retains second place, although she lost it several years ago to Imperial county. The latter county, with a butter output of 5,196,648 pounds for the year, represents the most rapid gain over any other county. Alameda county increased in butter production from 315,472 pounds in 1918 to 1,079,352. Such a boom in Alameda county seems incredible.

The magnitude of the industry for the past year has been vastly increased through the high prices that have prevailed and through the inauguration of new branches of the dairy manufacturing business. Thus, condensed and powdered milk production, which only a few years ago was a negligible product of the state, has increased up to 74,901,238 pounds, with a market value of \$10,111,667. Milk sugar production in California for the statistical year mentioned up to almost the total production of the country five years ago. California's output amounted to 1,907,174 pounds, worth \$685,583.

Butter production, however, is the big item in the dairy output of the state. The production for the year foots up to 62,449,004 pounds. Although it is approximately two millions more than last year, it is behind the "peak" year of 1916, when production crossed the seventy million pound mark. A remarkable increase in the production of cheese is also a feature of interest as it shows a noticeable tendency to get as much human food out of milk as possible. Skim milk has, in fact, become a comparatively scarce article in California, for which

increased production of cheese, condensed milk, milk sugar and casein, pigs and calves have not indulged in the by-product as in times past.

Other leading counties in dairy production, all located in irrigated sections are Fresno, Kings, Merced, and Tulare. Marked declines in production have taken place in Butte, Sacramento, Siskiyou, and several other counties.

The amount of the output of cheese reported is much below the actual production in the state, and it is impossible to estimate it, as the owners of factories constantly change from making cheese to the production of cream. It has never been attempted to get a report on other than that made by the ordinary Cheddar process.

It has been demonstrated that a Cheddar type of cheese of the finest quality can be made in California, but most of the cheese made in this state is made for immediate consumption and is not suitable for exportation. There are, however, some factories in California that make cheese by the same process as is used in Oregon, Wisconsin and New York, and the quality of some of these brands is equal to any cheese made in the above-named states.

#### Production of Butter and Cheese in California, 1917-1919.

(Compiled from the returns of the State Dairy Bureau. For year ending September 30, 1919.)

##### Butter.

1914 -----	27.61	15.79			

## CALIFORNIA HONEY AND WAX.

California is the leading honey state and owes its pre-eminence to three principal sources of supply—the alfalfa of the valley sections, the wild sage and the wild buckwheat shrub of the southern hills and mountains, and the citrus groves. The mountain sages of California produce a type of honey of much importance commercially and by common consent one of the finest of all in color (white), density, and flavor. The sage honeys possess, in addition to other virtues, the important one of not granulating readily. Honeys from the desert plants other than sage are as a rule good; many are excellent and rarely are they of poor quality.

Orange honey ranks high among the commercial honeys, being produced in large quantities in California.

Honey is produced in three principal forms: First, comb-honey in 1-pound sections, as commonly retailed; second, extracted or liquid honey, ordinarily removed from the comb by means of a centrifugal machine, although sometimes by crushing the comb and draining, or by pressing it, although this last procedure is likely to produce an inferior product; third, "bulk" or "chunk" honey, the comb honey more or less broken and mixed with the liquid honey.

## Production of Honey in California, 1909 - 1919.

Year	Pounds	Year	Pounds
1909 -----	10,500,000	1915 -----	9,300,000
1910 -----	4,500,000	1916 -----	10,600,000
1911 -----	5,600,000	1917 -----	8,900,000
1912 -----	4,800,000	1918 -----	6,500,000
1913 -----	3,200,000	1919 -----	6,350,000
1914 -----	7,900,000

## PART V.

## FARM CROPS.

**Cereals: Barley, Buckwheat, Corn, Oats, Rye, Wheat; Potatoes; Broom Corn; Hay; Sugar Beets; Rice, Hops and Cotton; Value of All Crops; Farm Crops by Counties.**

In comparing one year with another, it should be borne in mind that acreage is, on the whole, a better index of the general change or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. The acreage in fruits and nuts can not be given, as the extent of the industry has always been calculated by the number of trees only.

## SIZE OF CEREAL CROPS IN CALIFORNIA.

The acreage sown to wheat and other cereal crops in California has greatly decreased in recent years, the land being devoted to orchards and vineyards, which yield a much higher profit.

## BARLEY.

California has held the first place in the production of barley for a number of years, as far back as the year 1852. The area in barley has been upwards of 1,000,000 acres since 1901, the largest area being in 1910, with 1,195,000 acres, which produced 46,500,000 bushels, or the largest on record. The acreage sown in 1919 was reduced this year to the end that a larger acreage could be had for wheat. There were 1,000,000 acres harvested as against 1,320,000 in 1918. The yield per acre was 30 bushels as compared with 26 bushels last year. This shows that the total production was 4,320,000 bushels less than a year ago, notwithstanding the increase in yield per acre.

## BUCKWHEAT.

Buckwheat is grown principally in Pennsylvania and New York where 60 per cent of the crop is raised, while nearly 20 per cent is raised in West Virginia, Virginia, Michigan and Wisconsin, the United States being the third largest buckwheat producing country in the world.

This crop has never been grown to any extent in California; therefore, the production being so small, regular records have not been kept. The area under cultivation is but a few hundred acres, and the production from 10,000 to 15,000 bushels.

## CORN.

Corn has also fallen off; the acreage was between 100,000 and 161,000 in former years, the highest production being in 1891, when it amounted to upward of 5,570,000 bushels. In 1919 the acreage was 87,000 and the production 2,871,000 bushels.

In the United States, corn is grown more widely than any other crop. It is grown to some extent in every state in the Union. The acreage in the United States usually exceeds the combined acreages of wheat, oats, barley, rye, buckwheat, and rice. Annual production ranges from 2,500,000,000 to 3,000,000,000 bushels, or slightly exceeding the combined yields of the cereals just mentioned. The value is far in excess of any other crop. With the possible exception of cotton, corn is the most important and irreplaceable crop in the agriculture of this country.

During the last three years the crop in the United States was almost equally divided between white and yellow corn, the mixed corn being only a small proportion.

The corn crop is distinctly an American crop, about 75 per cent of the "world" yearly production of approximately three and a half billion bushels being grown in the United States. What becomes of this vast quantity of corn is frequently asked. Answers to inquiries sent to crop correspondents of the Bureau of Statistics of the United States Department of Agriculture permit some interesting deductions to be made upon this subject.

The disposition of the 513,000,000 bushels estimated as used in "towns" (as distinguished from "farm" consumption) was approximately as follows:

Indian corn	Bushels	Per cent of total crop
Used in flour and grist mills (census).....	245,000,000	9.1
Used in the manufacture of glucose and starch.....	40,000,000	.5
Used in manufacture of distilled liquors, 1910.....	21,000,000	.8
Used in manufacture of malt liquors.....	14,000,000	.5
Used for feed in towns.....	120,000,000	4.4
Exported.....	45,000,000	1.7
Balance indefinite.....	28,000,000	1.0
Totals.....	513,000,000	19.0

## OATS.

In oats the acreage has increased from 153,000 acres in 1900 to 192,000 in 1910 and 200,000 in 1916. Since that year it has declined; in 1918 the acreage was 175,000, and the production 5,600,000 bushels; in 1919 the acreage was the same, but the yield per acre was two bushels less, and the production 350,000 bushels less.

## RYE.

Rye has always been a small crop in California, and the area and production have fallen off greatly in recent years, the acreage being 62,925 in 1900 and 7,027 in 1910. In 1916 the acreage was 8,000 and the production 104,000 bushels, and in the last two years none was reported.

**WHEAT.**

In wheat the production decreased heavily between 1900 and 1910, in the former year the acreage being 2,771,000 and in the latter only 550,000. In 1917 the acreage was 375,000 and the production 7,425,000 bushels, and in 1918, 506,000 acres and the production 7,590,000 bushels. In 1919, 990,000 acres were harvested, and the production was 16,335,000 bushels, or an average of 16.05 bushels to the acre which is the largest acreage and production since 1907.

**BROOM CORN.**

This crop has never been grown to any extent in California. During the last thirty years more than 93 per cent of the brush produced in the United States was grown in 16 states. Oklahoma now leads in production. There are two varieties, the Standard and Dwarf. Nearly 75 per cent of the quantity produced, which is about 52,000 tons, is of the latter variety.

**POTATOES.**

The potato is the most important vegetable raised.

In 1917 the acreage was 105,000 and the production 15,225,000 bushels, and in 1918, 90,000 acres, and the production 12,870,000 bushels. In 1919 the acreage was 2,000 less and the production 1,518,000 bushels less than in 1918, but the crop brought the farmers nearly \$4,000,000 more. The acreage harvested in 1919 shows an increase of 2,000 over 1918, but the yield per acre was only 33 bushels as compared with 35 last year. Therefore the total production was 104,000 bushels less.

The principal regions of California in which potatoes are grown at the present time are the Delta region, comprising parts of San Joaquin, Sacramento, and Contra Costa counties; the Salinas Valley in Monterey County; the Napa and Sonoma valleys and the regions comprising parts of Santa Barbara, Los Angeles, and Riverside counties. The average yield per acre in these several localities differs widely, ranging from 4,500 to 12,000 pounds. While many varieties of potatoes have been tried in California, but few have been found well adapted.

**SWEET POTATOES.**

Next to the Irish potato, the sweet potato is the most extensively grown vegetable in the United States. In California it is not cultivated on a large scale. During the last three years the acreage has not varied, being about 6,000 acres and the production in 1918, 1,190,000. In 1919 the acreage was 8,000 compared with 7,000 the previous year, but the production fell off to 1,096,000 bushels.

**HAY (TAME).**

The acreage in hay during the last three years has fallen off. In 1917 the acreage was 2,400,000, and the production 4,800,000 tons; and in 1918, 2,376,000 acres, and the production 2,970,000 tons, but in 1919 although the acreage was only 2,352,000 acres, the crop amounted to 4,257,000 tons.

## Hay By Varieties 1916-1917.

	1916 (tons)	1917 (tons)
Timothy-----	44,000	101,000
Timothy and clover mixed-----	44,000	121,000
Clover alone-----	87,000	75,000
Alfalfa-----	1,838,000	2,237,000
Millet and Hungarian grass-----		5,000
Grains cut green for hay-----	2,056,000	1,714,000
Other tame hay-----	306,000	307,000
Wild, salt, and prairie hay-----	240,000	259,000
Wild, salt, and prairie hay*-----	240,000	259,000
Total all hay-----	4,615,000	4,819,000

\*The acreage and production of wild hay during the last two years was as follows: 1918, acreage 182,000, production 173,000 tons; 1919, 177,000 acres and the production 205,000 tons. The largest acreage, 3,550,000, in 1919, was in South Dakota, where the production amounted to 3,728,000 tons.

## SUMMARY OF FARM CROPS, 1850-1910.\*

(Compiled from the reports of the Bureau of the Census.)

Year	Barley		Buckwheat		Corn	
	Acres	Bushels	Acres	Bushels	Acres	Bushels
1850-----		9,712				12,236
1860-----		4,415,426		76,887		510,708
1870-----		8,783,490		21,928		1,221,222

## Duty on Imported Cereals, Potatoes, and Hay.

Barley.....15c per bushel of 48 pounds	Oats.....6c per bushel of 32 pounds
Wheat.....free	Rye.....free
Buckwheat.....free	Potatoes.....free
Corn.....free	Hay.....\$2.00 per ton
Wheat flour.....free	

NOTE.—The imports of breadstuffs are comparatively small.

The crops of barley, buckwheat, corn, oats, rye, wheat, potatoes and hay, from 1868-1903, will be found in the Report for 1913, pages 88-95.

## California Buckwheat Crops.

Year	Acreage	Average yield per acre, bushels	Production, bushels	Average farm price, December 1	Farm value, December 1
1890	677	14.5	9,816	\$0 73	\$7,166
1891	683	15.3	10,450	58	8,051
1892	697	16.5	11,500	53	6,141
1893	691	21.5	14,857	71	10,548
1894	691	18.0	12,438	45	5,597
1895	726	30.0	21,780	64	13,939
1896	690	18.7	12,903	39	5,032

NOTE.—The production of buckwheat is so small that it has not been recorded in recent years, the area being only a few hundred acres. The crop is raised in only twenty-four states. Very little is exported. The acreage in buckwheat in California in 1910 was only 849, producing 14,681 bushels.

## California Corn Crops, 1900-1919.

Year	Acreage	Average yield per acre, bushels	Production, bushels	Average farm price, December 1	Farm value, December 1
1900	54,079	25.0	1,351,975	\$0 61	\$824,705
1901	59,703	31.0	1,850,793	68	1,258,539

\*Including forage.

## Summary of California Crops in 1919.

The acreage harvested of all field crops was slightly less than in 1918, but the tonnage exceeded that of any previous year in the history of the state's agriculture, and the total value is many millions greater than in any former year.

The value of the fruit crops shows a much greater increase than do the field crops, and notwithstanding some losses occasioned by labor troubles and car shortage at critical times, the fruit growers, through long hours of toil and worry, brought forth a record crop of every fruit grown in the state, with the one exception of oranges.

The total acreage of all field crops harvested in 1919 was 5,881,340 compared to 5,914,200 in 1918. By reducing all to the same unit of measure—that of tons—the total production in 1919 was 7,627,256 tons, compared to 6,355,668 tons in 1918, and the total farm value to the grower is \$284,483,000 in 1919, compared to \$246,599,000 in 1918.

The total production of all fruit crops in 1919 was approximately 2,071,525 tons, valued to the grower at \$234,813,000, or an average of about \$113 per ton. In 1918 the production was 1,766,675 tons, valued at \$179,263,000, or an average of about \$101 per ton.

“Cabbages” and cantaloupes are not to be despised in contributing to the crop values of the state, so we find the value of melons and vegetables easily amounted to \$16,200,000 in 1919, compared to \$10,995,000 in 1918.

A recapitulation of the above figures shows the grand total value of all the products of the soil in California to be \$535,496,000 for the present year, compared to \$436,817,000 in 1918.

The above figures are approximately what the grower received or what he sold them for. What the consumer paid, or will pay for them, is another question.\*

\*U. S. Field Agent for California.

#### RANK OF STATES BY PRODUCTION OF IMPORTANT CROPS IN 1919.

(Compiled from the Reports of the U. S. Department of Agriculture.)

##### Barley (34 States).

Rank and state	Acreage	Production, bushels	Average per acre, bushels
1. California -----	1,000,000	30,000,000	30.0
2. South Dakota -----	875,000	19,250,000	22.0
3. Minnesota -----	910,000	18,200,000	20.0
4. Kansas -----	600,000	16,200,000	27.0
5. North Dakota -----	1,300,000	14,950,000	11.05
United States -----		165,719,000	

##### Buckwheat (24 States).

1. Pennsylvania -----	256,000	5,530,000	21.06
2. New York -----	233,000	5,126,000	22.0
3. West Virginia -----	42,000	882,000	21.0
4. Michigan -----	48,000	662,000	13.8
5. Ohio -----	26,000	621,000	23.9
United States -----		16,301,000	20.6

No buckwheat is imported.

##### Corn (48 States).

1. Iowa -----	10,000,000	416,000,000	41.6
2. Illinois -----	8,600,000	301,000,000	35.0
3. Texas -----	6,760,000	202,800,000	30.0
4. Nebraska -----	7,030,000	184,186,000	26.2
5. Indiana -----		175,750,000	
United States -----	102,075,000	2,917,450,000	28.6

## Oats (48 States).

Rank and state	Acreage	Production, bushels	Average per acre, bushels
1. Iowa -----	5,670,000	196,182,000	34.6
2. Illinois -----	4,102,000	123,060,000	30.0
3. Texas -----	2,250,000	94,500,000	42.0
4. Minnesota -----	3,220,000	90,160,000	28.0
5. Wisconsin -----	2,339,000	78,123,000	33.4
United States -----	42,400,000	1,248,310,000	29.4

## Rye (38 States).

1. North Dakota -----	1,945,000	15,560,000	8.0
2. Michigan -----	900,000	13,500,000	15.0
3. Wisconsin -----	525,000	8,295,000	15.8
4. Minnesota -----	522,000	7,830,000	15.0
5. Nebraska -----	403,000	6,650,000	16.3
United States -----	7,063,000	88,478,000	12.5

## Wheat (42 States).

1. Kansas -----	11,624,000	151,001,000	13.0
2. Illinois -----	4,150,000	65,675,000	15.8
3. Nebraska -----	4,384,000	60,675,000	13.8
4. Missouri -----	4,296,000	57,886,000	13.5
5. Ohio -----	2,860,000	54,440,000	19.0
United States -----	73,243,000	940,987,000	12.8

## Potatoes (48 States).

1. New York -----	363,000	39,567,000	109
2. Michigan -----	326,000	28,688,000	88
3. Wisconsin -----	300,000	28,200,000	94
4. Minnesota -----	300,000	26,100,000	87
5. Pennsylvania -----	254,000	25,400,000	100
United States -----	4,013,000	357,901,000	89.2

## Sweet Potatoes (26 States).

1. Alabama -----	151,000	14,194,000	94
2. Georgia -----	142,000	13,064,000	92
3. Texas -----	95,000	10,450,000	110
4. Mississippi -----	98,000	10,290,000	105
5. North Carolina -----	106,000	9,858,000	93
United States -----	1,029,000	103,579,000	100.7

## Hay, Tame (48 States).

Rank and state	Acreage	Production, tons	Average per acre, tons
1. New York -----	4,386,000	6,579,000	1.50
2. Iowa -----	3,140,000	5,181,000	1.65
3. Illinois -----	3,250,000	4,810,000	1.48
4. Wisconsin -----	2,677,000	4,738,000	1.77
5. Kansas -----	1,832,000	4,507,000	2.46
United States -----	56,348,000	91,326,000	1.62

## Rice (11 States).

Rank and state	Acreage	Production, bushels	Average per acre, bushels
1. Louisiana -----	560,000	19,712,000	35.2
2. California -----	142,000	7,881,000	55.5
3. Texas -----	218,000	6,998,000	32.1
4. Arkansas -----	158,000	6,162,000	39.0
5. Missouri -----	600	96,000	38.0
United States -----	1,089,800	41,059,000	37.7

## Cotton (16 States).

Rank and state	Acreage	Production, bales	Average per acre, pounds
1. Texas -----	10,346,000	3,065,000	1,125
2. Georgia -----	5,288,000	1,658,000	1,156
3. South Carolina -----	2,881,000	1,422,000	243
4. Oklahoma -----	2,341,000	984,000	190
5. Mississippi -----	2,950,000	952,000	154
United States -----	33,344,000	11,330,000	158.2

## Tobacco (23 States).

Rank and state	Acreage	Production, pounds	Average per acre, pounds
1. Kentucky -----	550,000	456,500,000	830
2. North Carolina -----	554,000	310,240,000	560
3. Virginia -----	230,000	131,100,000	570
4. Tennessee -----	110,000	88,000,000	800
5. South Carolina -----	135,000	81,000,000	600
United States -----	1,901,200	1,389,458,000	730.8

\*Connecticut, Massachusetts, New York, and Pennsylvania, produce from 1,300 to upwards of 1,500 pounds per acre; Wisconsin and Missouri upwards of 1,000 pounds per acre.

## GRAIN SORGHUMS.

Kaffirs, Milo Maize, Feterita (7 States), in 1919.

Rank and state	Acreage	Production, bushels	Average per acre, bushels
1. Texas -----	1,798,000	59,334,000	33.0
2. Oklahoma -----	1,440,000	33,120,000	23.0
3. Kansas -----	1,040,000	17,888,000	17.2
4. New Mexico -----	238,000	7,140,000	30.0
5. California -----	170,000	4,886,000	25.8

## Broom Corn (7 States), in 1919.

Rank and state	Acreage	Production, tons	Average per acre, tons
1. Oklahoma -----	137,000	26,900	.196
2. Texas -----	58,000	10,800	.186
3. Illinois -----	15,200	4,200	.275
4. New Mexico -----	20,000	4,000	.200
5. Kansas -----	20,000	3,800	.167

Imports and Exports of Important Crops in the United States, 1915 - 1919.  
Barley.

Barley exported, year ending June 30		Bushels	Value
1915	-----	26,754,522	\$18,184,079
1916	-----	27,473,160	20,663,533
1917	-----	16,381,077	19,027,082
1918	-----	26,285,378	41,650,886
1919	-----	20,457,781	27,687,047

## Buckwheat.

Export of buckwheat, year ending June 30		Bushels	Value
1915	-----	413,643	\$396,987
1916	-----	515,304	481,014

**RICE.**

If its importance as a food product is to be measured by the number of persons who consume it, rice must, without a doubt, be considered the greatest cereal, as it is more widely and generally used as a food material than any other. Half a century ago experiments were made in the cultivation of rice in California, but they were not successful. In 1860, small quantities were raised in Alameda, Tehama, San Mateo, Santa Cruz and Sonoma counties, but the total amount produced was only 2,140 pounds.

In 1862 the following premiums were offered by the legislature: For the first 1,000 pounds of rice, \$250; for the first 5,000 pounds, \$500; for the first 10,000 pounds, \$1,000; and the same sums for the first, second and third succeeding years. The average per capita consumption of rice for food in this country is scarcely 6 pounds a year, and most of this is consumed in the Southern states. The high esteem in which rice is held in other countries is indicated by their per capita consumption. Norway and Sweden consume over 9 pounds per capita; Russia over 11 pounds; England, 27 pounds; France, 34 pounds; Italy, over 101 pounds, and Germany more than 93 pounds. But even these European countries do not begin to eat as much rice as Japan and China. There, rice is the most important article of diet. Each man, woman and child in Japan, on the average, consumes 147 pounds of rice each year, and those in China, 158 pounds.

The rice industry of California is of recent development. The investigations inaugurated by the Department of Agriculture in the spring of 1909, and continuing three seasons, furnished valuable data on the commercial possibilities of rice culture in California. These investigations were largely responsible for the beginning of the industry. The first commercial crop of rice in California was grown in 1912 on black adobe soil in the Sacramento Valley, near Biggs.

The successful introduction of this crop is dependent upon an abundant supply of water, which must always be available during the growing season. The soil area adapted to rice in this valley is sufficiently large to produce many times the 55,000,000 pounds of cleaned rice which are consumed each year on the Pacific coast. How much of this area has sufficient available water for proper irrigation is uncertain, though for a good portion of it there is apparently an abundant supply. Increase in the rice acreage should therefore be made with care.\*

Its culture has opened up a new industry for lands which have hitherto been deemed unfit for anything but wheat, on account of the adobe conditions of the soil. The time of harvest varies, according to the variety, from August to November.

Of the varieties of rice grown in California in 1918, 96 per cent was Japanese, 1 per cent of Blue Rose and 2 per cent of Early Prolific and 1 per cent of other kinds.

Rice was grown successfully in the northern part of Kern County in 1912 as an experiment on heavily laden alkali land which had hitherto been regarded as practically worthless. From 15 acres 349 sacks, weighing from 100 to 110 pounds, were produced.

\*Report on Rice Growing, Circular No. 97, U. S. Department of Agriculture.

The following is the acreage of rice by counties in 1915 to 1919:

The rice mills handle the complete process from the time the rice leaves the threshing machine on the field until it is packed in 2½-pound cotton bags ready for retail consumption, both in the polished and unpolished. The by-products such as bran and rice meal, are very nutritious for cattle and hog feed. Increased production and consumption of rice not only would expand a profitable industry, but the eating of more rice in the place of wheat would release a greater quantity of the bread grain for shipment.

During the year 1918 the San Joaquin Valley doubled its acreage, 7,000 acres having been sown to rice. It may be said this section has emerged from the experimental stage and the popular cereal is now being grown on a commercial scale.

The construction and operation of three new mills in 1918, making a total of seventeen in the state, indicate the growth of the industry in California.

In this connection it is interesting to note the rapid increase in acreage since rice growing reached the commercial stage in 1914.

\*Including paddy.

The acreage harvested in California this year was 142,000 as compared with 112,000 last year, and the average yield was 55½ bushels as compared with 65½ in 1918. The total production this year was 7,781,000 bushels as compared with 7,336,000 last year. The value of the crop to the state this year was over 21,000,000 dollars which is more than 7,000,000 dollars increase compared with the 1918 crop. In estimating the value per acre of the different field crops in California, it is shown that rice has paid better than any other except Irish and sweet potatoes.

Rice value per acre-----	\$148.00
Wheat value per acre-----	34.00
Corn value per acre-----	59.00

## COTTON.

Cotton planting commenced in California at an early date. An act was approved on April 25, 1862, for the encouragement of agriculture and manufactures which offered premiums for the production of a number of products. For the first plantation of not less than 10 acres in bearing of good staple cotton, \$1,000 was offered, for 50 acres \$2,000, and for 100 acres \$3,000. At the fair held by the State Agricultural Society in 1863, Jackson and Johnson of Sacramento County exhibited samples of cotton from a field of 25 acres. Between the years 1880 and 1884 it is stated that the annual production averaged about 250,000 pounds, two-thirds of which was raised in Merced County and the balance in Kern County.

## Northern and Central California.

The cotton crop in the Sacramento and San Joaquin valleys in 1918 was an experimental one, and the acreage planted was not as large as at first anticipated. In some parts a considerable area was unproductive, owing to the land being unsuitable, too deep planting, and other causes due to inexperience, are given as the reason for failures. The results on the whole have been satisfactory, and demonstrated that this crop can be raised successfully in both these valleys. In 1919, no cotton was raised in Sacramento Valley, but in the San Joaquin Valley it was a great success, no less than 2,873 bales being ginned compared with 487 bales the previous year. Merced County took the lead with 980 bales compared with only 2 in 1918, Kern County was second with 846 bales, and Kings County third with 359 bales.

## The Sacramento Valley.

In Butte County, near Durham, 100 acres of upland cotton was planted and the yield was 75 bales. The remainder of the acreage was upon old rice land from which no pickings were made, the crop being bad and the yield of little value.

The harvesting of the acreage planted to cotton in 1918 was a decided disappointment. There were fourteen hundred acres originally planted in the vicinity of Durham and not less than 800 to 1,000 bales were expected, as the cotton had an exceptionally good stand and looked extremely promising, but when the bolls started to mature persistent rains set in and rotted the cotton so the final result was but 75 bales ginned at the Durham gin.

In 1919 no cotton in commercial quantities was raised. Short staple or Durango cotton is recommended, as Egyptian cotton is liable to failure for the reason that it requires from four to six weeks longer to mature, and is therefore liable to be caught by frost, before maturity, and cotton is too expensive a crop to take this risk. On the other hand, while Egyptian cotton may command a higher price than the former two varieties, the expense of growing, harvesting, ginning, and smaller yield practically offset the difference. It is recognized that short staple and Durango always command a stable market.

A small quantity was planted at Cottonwood in Shasta County as an experiment of the Meade, Durango and Egyptian varieties, but the rains came before it was matured, and none was raised in 1919.

## The San Joaquin Valley.

In 1918 there were about three thousand acres planted and about two-thirds of it gathered; 487 bales were ginned in all, of which 88 bales were upland cotton and 399 bales were the Egyptian long staple. Of the Egyptian cotton, there was only one bale of fancy grade, and this came from Bakersfield, Kern County. There were three bales of extra 1  $\frac{1}{16}$  from the Kearney Vineyard of the University of California. The production in bales of 500 pounds was as follows:

Cotton Crops 1918 - 1919.

Counties	1918			1919		
	Upland	Egyptian	Total	Upland	Egyptian	Total
Fresno .....	83	91	174	124	17	141
Kern .....		176	176	666	180	846
Kings .....		65	65	344	15	359
Madera .....	5	11	16	147		147
Merced .....		2	2	980		980
Stanislaus .....		7	7			
Tulare .....		47	47	390	10	400
Totals .....	88	399	487	2,651	222	2,873

Of the 1919 crop 1,483 bales were Durango cotton, 1,170 short cotton, and 220 Pima Egyptian cotton. Of this quantity 2,054 bales were ginned at Fresno and 789 at Bakersfield. The gin at Corcoran, Kings County, was not operated.

## Acreage of Cotton in 1919.

The McDevitt Cotton Company planted about 7,000 acres south of Dos Palos.

As regards the future prospects for cotton in the San Joaquin Valley and the best kind of cotton to be grown, there is no doubt that the Egyptian long staple cotton can be grown successfully and profitably in some parts of the valley. In the Arvin section near Bakersfield, which is on the east side near the foothills, the nights are not so cool and the growing season is a little longer; also, east of Fresno, the Egyptian cotton can be grown profitably; in fact, Egyptian cotton can be grown by those who have had a little experience, in most parts of the valley where last season it was not considered possible that it could be grown profitably. The growing of this type of cotton requires considerably more attention than the upland and it must be grown just in the right way to get satisfactory results. With regards to the quality of the Egyptian cotton, it will be best to develop the Pima variety as there is no doubt about its being a little better than the Yuma variety. The New England firms who are taking this cotton state that it is without doubt the best cotton they have ever seen from California. The cotton which, fully matured, showed more strength and was not so soft as the Salt River cotton and the grade for that class of cotton was better than the Salt River cotton.

As regards the production of the upland cotton, there is now no doubt that it can be grown and make a profitable crop for the valley. The quality of the upland cotton was said by the spinners to whom the samples were submitted, to be also the best California cotton they had seen, as it had more strength than the southern California cotton.

In 1919 short staple cotton sold at from 30 cents to 45 cents per pound and long staple from 50 cents to \$1.60 per pound, depending on the length of the staple.

All the Egyptian cotton raised in the San Joaquin Valley was sold at the following prices:

Prices of Cotton, 1918.

Grade	Cents per pound
Extra, 1½-inch -----	46½
Choice, 1½-inch -----	46
Standard -----	45
Medium -----	42
Mixed -----	42

## Number of Cotton Gins.

The California Products Company cotton gin at Fresno has four 80-saw gins for ginning the upland cotton and three 48-inch roller gins for ginning the Egyptian cotton. At Bakersfield they have a cotton gin with three 48-inch roller gins for ginning Egyptian cotton and the McDevitt Cotton Company have a gin at Firebaugh, Fresno County. At Corcoran, Kings County there is also a gin.

## SOUTHERN CALIFORNIA.

## Imperial Valley.

The culture of cotton in California has become of commercial importance in the last few years. Commencing in Imperial Valley in 1909 with only 324 acres it increased rapidly each year.

In 1918 the Yuma Irrigation Project, in the Pasqual Valley in the vicinity of Bard, in Imperial County, produced 3,913 bales from about 5,500 acres compared with 560 bales from 1,200 acres in 1917.

In 1919 the acreage in cotton amounted to 76,000 and the production to 36,632 bales.

The Palo Verde Valley in Riverside County followed next, 16,300 acres being planted here in 1918, the yield of short staple being about 13,406 bales, and 250 bales of long staple. In 1919 the acreage was estimated at 21,300 acres, and the production 16,000 bales of Pima cotton. At Coachella an estimated area of 1,200 acres produced 1,100 bales, and in Perris Valley the acreage was 2,000 and the production 1,000 bales.

In the Imperial Valley the land is automatically fertilized every time they irrigate with the water from the Colorado River. This fact alone has greatly assisted the farmers in that district. The yield per acre in the Imperial Valley is much larger than in any other state in the Union.

## Estimated Cotton Crop of the Imperial Valley, 1909-1918.

(In bales of 500 pounds.)

Year	Acres	Bales			Average price per lb., cents			Value of cotton	Value of cotton and seed
		Short staple	Durango or long staple*	Pima	Short staple	Long staple	Pima		
1909..	324	350	-----	-----	14	-----	-----	\$12,810	-----
1910..	9,000	5,986	-----	-----	14	-----	-----	419,000	-----

1914..	60,000	40,000	5,000	-----	7	12½	-----	1,700,000	2,075,000
1915..	40,000	21,000	6,000	-----	12	16½	-----	1,755,000	2,205,000
1916..	90,000	35,000	20,000	-----	20	26	-----	6,100,000	7,300,000
1917..	120,000	45,000	25,000	-----	28	35	-----	9,600,000	11,387,500
1918..	165,000	50,000	32,000	1,450	27	30	50	12,162,500	12,437,898

In 1919 in Imperial County the production was about 36,600 bales, and on the Mexican side of Imperial Valley 58,000 bales.

## Number of Gins in Imperial Valley and Riverside County.

The above figures include the cotton produced on the Mexican side of the border, which is largely operated by the residents of Imperial County, and is ginned and marketed there. About an equal number of bales are produced on either side. The following 26 cotton gins have been established in Imperial Valley besides 10 gins on the Mexican side; they are situated as follows: Brawley 1; Calexico, 4; Calipatria, 2; Colorado, 1; El Centro, 3; Heber, 1; Holtville, 3; Imperial, 4; Mexicali, 4; Seeley 3. There are gins also in Riverside County at Blythe, in the Palo Verde Valley, 4 gins, and 1 gin in the Coachella Valley at Fertilla.

There have been various models of cotton picking machines tried out in the valley at different times, but apparently they never made a successful demonstration.

## Cotton Production, 1919.

Rank and state	Acreage	Production, bales	Average per acre, pounds
1. Texas -----	10,346,000	3,065,000	125
2. Georgia -----	5,288,000	1,658,000	156

## Cottonseed Oil.

The California mills in 1919 processed no less than 45,000 tons of cottonseed, the average yield of oil being about 300 pounds per ton.

## SILK.

The beginning of the silk industry dates back more than fifty years. In 1862 the state offered a premium of \$2,000 for the first ten bales of raw silk of 100 pounds each, and \$5,000 for the first hundred bales. Another act was passed in April, 1866, for the encouragement of silk culture offering a premium of \$250 for each plantation of 5,000 mulberry trees of two years old, for two years, and \$300 for every 100,000 cocoons for four years, but the act was superseded in 1868 by another which made some changes regarding the conditions, but to remain in force for four years. In 1868 over 800,000 cocoons were reported raised in Sacramento County. On November 18, 1880, the Ladies' Silk Culture Society was organized, and 15 acres of land secured near Piedmont for the growing of mulberry trees; on January 2, 1885, the society was incorporated. Another act was approved on March 15, 1883, appointing a State Board of Silk Culture, consisting of nine members, five of whom were to be members of the Ladies' Silk Culture Society, and appropriating \$5,000 for that purpose; \$2,500 for the year 1883 and \$2,500 for 1884.

Another act approved March 18, 1885, appointed a board of silk culture consisting of seven members, three of whom were required to be members of the Ladies' Silk Culture Society, and was granted an appropriation of \$5,000 for that year, and the same amount for 1886.

The board issued annual reports from 1883 to 1888, when the appropriation was discontinued. In one of the earlier reports it is stated "That silk production can be carried on successfully in California none who have given any attention to the history of agriculture venture or experiments can doubt." In the fourth annual report of the Ladies' Silk Society for 1889, the question is asked: "Will the silk industry pay in California? As a commercial or agricultural industry on a large scale, no; as a home, family or a cottage industry we most emphatically answer, yes." "Filatures may be carried on by capitalists, but the raw material or cocoons should be a family industry." At the Centennial Exhibition held in Philadelphia in 1876, a silk culture display was made by California. At the State Fair of 1867 the first prize of \$50 was awarded for the best exhibition of silk from feeding of the worms to the weaving of silk.

The center of attraction at the State Fair in 1883 was the filature or silk reeding machines.

In 1918, 251,447 pounds of cocoons, value \$319,349, were imported and 34,846,197 in raw skeins, value \$183,076,241.

The first mulberry trees raised in California were from seed imported in 1854 from France and planted at San Jose. Nearly all varieties of the mulberry have been introduced into California, but most attention has been paid to those most suitable for feeding silkworms, of which the white variety is said to be the best. No silk has been produced in the state in recent years in commercial quantities, but the Seriterre Company has been organized for the purpose of engaging in silk culture on a commercial scale in California and has planted lands in Butte County in mulberry trees.\*

#### TEXTILE FIBERS.

California can grow all the fiber plants except such as are purely tropical.

California has done much in an endeavor to promote useful developments of its large and varied resources. On April 25, 1862, an act (Chapter 302) was approved for the encouragement of agriculture and manufacturers, and offering premiums for the production of flax, hemp, cotton, silk, sugar, molasses, rice, tea, coffee, beer, linseed oil, and other articles.

#### FLAX AND HEMP.

Premiums of \$1,000 were offered by the state in 1862 for the first 200 bales of flax or hemp of 200 pounds each, and for the first, second, and third succeeding year \$300, \$200 and \$100, respectively.

Flaxseed was raised in the early eighties to the amount of about five million pounds, two-thirds of which was produced in San Luis Obispo County, and the rest in San Mateo and Santa Barbara counties.

On the Rindge Tract, in San Joaquin County near Stockton, in 1916 there were 1,000 acres in hemp, which was increased to 4,000 acres in 1918, producing about 2,500 tons.

Although grown in California over a period of several years, American or "Kentucky" hemp is a comparatively new crop. It has been

---

\*For further details regarding the silk industry, see Report for 1918, pages 123-124.

grown successfully in parts of California other than the delta section, but the peat lands of the delta have proven the best soil for its production, giving a yield and strength of fiber that can not be excelled in any other part of the United States. Hemp is a native of the common nettle, which grows in large quantities in the delta country adjacent to Stockton and which itself produces a very good fiber.

Although a good profit may be realized on hemp, it is not a crop for the small farmer, who can not afford the facilities at the present time necessary for its successful marketing. Nearly two years are required to realize on a crop and much expensive machinery is required. It is a very rapid grower, at times growing at the rate of more than an inch a day. It sometimes reaches a height of 18 feet, although 10 to 12 feet is considered a more desirable growth. In normal times the price is about \$150 a ton, but on account of war conditions the price has been \$240 a ton.

The average yield is about 1,200 pounds of fiber per acre in this section, while it is about 900 pounds in other states, 500 pounds in Italy and 400 pounds in Russia.

#### Hemp (12 States) in 1917- 1919.

In the production of hemp in 1917, Kentucky had 18,000 acres; Wisconsin, 7,000 acres; California and North Dakota, 5,000 each. The acreage in California increased from 600 acres in 1915, to 1,600 in 1916. Seven other states have a few hundred acres each. In 1918 4,000 acres produced 2,500 tons near Stockton in San Joaquin County and in 1919 170 acres were planted which should produce about 85 tons of hemp. There were also 500 acres on Woodward Island, which was destroyed by fire late in the season. Kentucky supplies practically all of the hemp seed sown in this country. It is grown in seed plats along the Kentucky River. Hemp must be specially planted for seed production. In 1919, 2,410 tons of hemp valued at \$1,605,664 were imported.

#### JUTE AND RAMIE.

The attempts thus far made at cultivating ramie in California have been discouraging, the plant being liable to suffer from frost, and yielding but little fiber.

Experiments made years ago with jute proved successful and tule lands should be well suited for this purpose.

#### Hemp Imported.

	Tons	Value		Tons	Value
1915 -----	5,310	\$1,156,129	1918 -----	6,813	\$2,748,376
1916 -----	6,506	1,642,418	1919 -----	2,410	1,605,664
1917 -----	9,635	2,487,477			

#### Flax Imported.

	Tons	Value		Tons	Value
1915 -----	4,694	\$1,875,701	1918 -----	5,607	\$5,818,473
1916 -----	6,939	3,508,295	1919 -----	4,420	3,996,590
1917 -----	7,918	4,236,232			

## Flaxseed (11 States) in 1919.

Rank in production	Acreage	Production, bushels	Average per acre, bushels
1. North Dakota .....	760,000	3,800,000	5.0
2. Minnesota .....	320,000	2,800,000	9.0
3. South Dakota .....	145,000	1,160,000	8.0
4. Montana .....	410,000	697,000	1.7
5. Iowa .....	16,000	152,000	9.5
United States .....	1,683,000	8,919,000	5.3

## SUGAR BEETS.

In 1862 the legislature passed an act to encourage the manufacture of sugar, and offered premiums for the first 100 bags of 100 pounds each of sugar made from sugar cane, sugar beets or sorghum cane, \$500; for the following year \$250, and for the two succeeding years, \$150. As early as 1856 a small beet-sugar factory was built at Ocean View, near San Francisco, which failed in a few years. In 1869 and 1870 a beet-sugar factory having a capacity of 50 tons was erected at Alvarado and was operated under the name of the California Beet Sugar Manufacturing Co. After operating four years it was sold to a concern in Santa Cruz County, which failed in 1876. The factory opened again for one year in 1880. About this time a new company was formed, which increased the capacity to 100 tons daily, but in 1886 the factory was partially destroyed by fire and the enterprise failed. In 1887 and 1888 the factory was rebuilt and sold to the Alameda Sugar Co. The plant was subsequently enlarged in 1890.

Other attempts to establish the beet-sugar industry were made at Brighton and Isleton, but these met with no success. In 1888 a plant was built at Watsonville with a 300-ton capacity. This was soon enlarged to 1,000 tons, but was later dismantled. In 1898 the Spreckels plant was erected at Spreckels, Cal., with a 3,000-ton capacity. This factory has become the largest in the United States. At the close of 1890 there were only three factories in the United States, two in California and one in Nebraska.

All the coast valleys of California are favorably situated, in respect to temperature, for the production of sugar beets, and the same may be said of certain lands in other parts of the state. In California there is a larger acreage that is well adapted to the growing of sugar beets than is found in any other state in the Union.

The cultivation of the beet greatly improves the land. No other crop so strengthens the soil and fits it for subsequent grain crops. According to a university professor, the following was the average increase in ten years on one estate:

	Yield before beet culture (bushels) per acre	Yield after beet culture (bushels) per acre	Per cent increase because of beet culture
Wheat .....	24.5	41.3	68.6
Rye .....	28.4	40.8	43.7
Oats .....	61.8	75.3	21.8
Barley .....	23.2	43.5	87.5
Potatoes .....	218.6	238.0	8.97
Rape .....	23.2	48.8	110.0

The following table gives a complete list of beet sugar plants in California, with their names and the location of factories. It also shows the daily slicing capacity, expressed in tons of beets, for each factory.

Beet Sugar Companies and Factories of California in 1919.

Manufacturing companies in California and factory location	Date erected	Daily slicing capacity, tons of beets
Alameda Sugar Co., Alvarado, Alameda County-----	1870	800
Los Alamitos Sugar Co., Los Alamitos, Orange County-----	1897	800
Spreckels Sugar Co., Spreckels, Monterey County-----	1899	4,500
Spreckels Sugar Co., Manteca, San Joaquin County-----	1917	1,200
Union Sugar Co., Betteravia, Santa Barbara County-----	1899	1,000
*American Beet Sugar Co., Chino, San Bernardino County-----	1891	1,200
American Beet Sugar Co., Oxnard, Ventura County-----	1898	3,000
*Sacramento Valley Sugar Co., Hamilton City, Glenn County-----	1906	700
Holly Sugar Co., Huntington Beach, Orange County-----	1911	1,200
Anaheim Sugar Co., Anaheim, Orange County-----	1911	850
Santa Ana Sugar Co., Santa Ana, Orange County-----	1908	600
San Joaquin Valley Sugar Co., Visalia, Tulare County*-----	1906	400
*Southern California Sugar Co., Santa Ana, Orange County---	1912	1,200
*Pacific Sugar Corporation, Tracy, San Joaquin County-----	1917	600

\*These four factories did not operate in 1919, and the factory at Corcoran, Kings County, and Visalia, Tulare County, have been discontinued.

Sugar Beets and Beet Sugar Produced in California, 1909 - 1919.

Year	Number of fac- tories in operation	Sugar beets			Sugar made (chiefly refined)	
		Area harvested, acres	Beets used for sugar, short tons	Average per acre, short tons	Short tons	Pounds
1909-----	10	83,000	882,084	10.63	127,272	254,544,000

## Domestic Seed Production.

Based on the average yield obtained for the last four years in each of the growing areas in which this acreage is located, the prospective production for 1920 is estimated to be 8,200,000 pounds, which is about 1,500,000 to 3,000,000 pounds greater than for any previous year, as will be noted by referring to the following table:

Acreage, Yield and Production of Sugar-Beet Seed in United States.

Year	Acreage	Average yield per acre, pounds	Production, pounds
1916-----	5,655	980	5,539,000
1917-----	4,638	1,094	5,076,000
1918-----	6,014	980	5,900,000
1919-----	11,139	600	6,700,000
1920, prospective-----	9,000	915	8,200,000

## Imports of Sugar-Beet Seed into the United States.

Year	Pounds	Year	Pounds
1909 -----		1915 -----	3,022,227
1910 -----	7,002,862	1916 -----	8,035,695
1911 -----	6,770,275	1917 -----	3,480,640
1912 -----	7,134,138	1918 -----	3,694,106
1913 -----	12,047,451	1919 -----	383,406
1914 -----	4,696,628		

The quantity of beet sugar produced in the state in 1916, 549,078,000 pounds, was the largest in the history of the industry.

## Beet Sugar Production in United States, 1911 - 1919.

Year	Number of factories	Acreage	Beets used, short tons	Sugar made, short tons
1911 -----	66	473,877	5,062,333	599,500
1912 -----	73	555,300	5,224,377	692,556
1913 -----	71	580,006	5,659,462	733,401
1914 -----	60	483,400	5,288,500	722,054
1915 -----	67	624,000	6,462,000	874,220
1916 -----	74	665,308	5,919,673	820,657
1917 -----	91	664,797	5,625,545	765,207
1918 -----	89	594,010	5,523,036	765,063
1919 -----	89	692,455	5,887,557	726,451

Payment for sugar beets is made to the growers according to the weight of the beets without tops. An estimated amount of tare on account of dirt, improperly topped beets, etc., is deducted from the gross weight of the topped beets as delivered by growers. For the past six years the value of the beet crop to growers has steadily increased from \$30,438,000 in 1914, to \$75,420,000 in 1919.

Some time elapses between the delivery of the beets and their use in the factory. The harvesting season may close from six to eight weeks earlier than the end of the sugar-making season. During this period beets lose in weight by drying, which causes some loss to the growers.

## Imports of Beet Sugar, 1908 - 1919.

(Duty on beets, 15 per cent ad valorem; sugar beet seed free.)

Year	Imported raw beet sugar		Year	Imported raw beet sugar	
	Pounds	Value		Pounds	Value
1908 -----	221,036,900	\$5,401,378	1914 -----	2,367,708	\$70,829
1909 -----	98,625,908	2,521,798	1915 -----	877,623	29,386
1910 -----	1,148	43	1916 -----	2,050	174
1911 -----	24,669,287	593,037	1917 -----	28,847	1,443
1912 -----	6,504,260	239,484	1918 -----	750	73
1913 -----	182,647,582	4,169,523	1919 -----	1,180	108

## HOPS.\*

The states producing hops are as follows:

State and rank in production	Acreage	Production, pounds	Average per acre, pounds
1. California -----	11,000	17,875,000	1,625
2. Oregon -----	8,000	6,400,000	800
3. Washington -----	2,600	3,484,000	1,340
4. New York -----	2,300	1,587,000	690

The total area devoted to the production of hops in California in 1909 was 8,391 acres, producing about 11,994,953 pounds of hops, valued at \$1,731,110. The climatic conditions and soil of California are more perfectly adapted to this crop than any other state in the Union, and its average production per acre is greater. The average production per acre in other hop-producing countries of the world has been estimated as follows: England, 905 pounds; Germany, 510 pounds; in the United States, 885 pounds, and in California, 1,469 pounds.

The cultivation of hops in California increased rapidly, but owing to the low prices several hundred acres were abandoned in 1915. The prices for 1916 opened at 12 cents to 15 cents, but few growers secured these figures, and prices fell to 5 cents to 8 cents, or less than cost of production. Because of adverse legislation and very low prices the hop growers in 1916 plowed out a good percentage of their hops and planted the land to more profitable crops, but owing to the great demand from Europe, and extremely high prices many growers are again resetting their yards, and planting new acreage.

The leading counties in the production of hops are Sacramento, Sonoma and Mendocino. The area in Sonoma County in 1919 was estimated at 4,200 acres.

## California Hops, Imports and Exports, 1909 - 1919.

(Duty, 16 cents per pound.)

Year	California crop		Imports		Exports		Consumed by brewers, pounds
	Bales*	Pounds	Pounds	Value	Pounds	Value	
1909 -----	69,000	12,765,000	7,386,574	\$1,337,099	10,446,884	\$1,271,629	40,813,804
1910 -----	71,000	13,135,000	3,200,560	1,499,354	10,589,254	2,062,140	43,293,764
1911 -----	87,000	16,095,000	8,557,531	2,706,600	13,104,774	2,130,972	45,068,811
1912 -----	117,000	21,645,000	2,991,125	2,231,348	12,190,663	4,648,505	42,436,665
1913 -----	118,500	21,922,500	8,494,144	2,852,865	17,591,195	4,764,713	44,237,735

1917	35	12
1918	39	10
1919	98	20

## TOBACCO.

In 1882, 26,590 pounds of tobacco was reported on about 27 acres, nearly all of which was in Los Angeles County, and part near Colton, in San Bernardino County, but the product was said to have a slightly pungent flavor.

For several years extensive and exhaustive experiments in the production of tobacco from Turkish seed were carried on at the Exeter Tobacco Ranch in Tulare County. There have been a number of types of tobacco experimented with, but the types that have been attended with success are such as are suitable for cigarette manufacture. The tobacco raised during recent years has been produced about equally by Fresno and Tulare counties, the total quantity being 7,500 pounds in 1909; 15,000 in 1910; 45,000 in 1911, and 150,000 in 1912.

In 1913 the crop of leaf tobacco amounted to about 175,000 pounds, some of which it is stated was purchased by the Eastern market. According to a leading authority, the crop was not as good as in former years, owing to the farmers planting too large an acreage and not being familiar with the culture of tobacco. The growers in Fresno County, where a considerable quantity has been produced, have experienced much difficulty in disposing of their crop at a fair price, so the cultivation of tobacco declined. During the war, a revival of the industry appeared to be in progress. In 1917, 14 acres of tobacco was raised in Fresno County, near Sanger, producing 12,000 pounds, which was sold to an Eastern buyer at 80 cents a pound. The crop produced about 1,000 pounds an acre.

The growers made money in 1917, and would have made large profits in 1918 had the war continued, but prices fell heavily and the large concern which last year purchased the crop offer considerably less than 60 cents per pound, and the growers claim that it costs that much to raise a crop. They still have to realize that price when all embargoes are lifted, but the growers are discouraged and it does not seem as if tobacco can be profitably raised in normal times under such conditions.

## San Joaquin Valley Crop, 1918.

There were in the season of 1918 approximately sixty growers who planted tobacco of the Cavala and Samsoon variety. Of the latter variety little was planted. Sixty growers planted something like five hundred acres and the total yield of the tobacco crop for the season of 1918 was almost 300,000 pounds.

The quality of tobacco was pronounced by experts both in New York and in Chicago as much better than the quality of Turkish tobacco grown in the previous years in this valley, although the candid opinion of tobacco experts is that there is a certain kind of bitterness in the tobacco grown in Fresno Valley which is hard to extract or get rid of. The tobacco grown in this valley heretofore has been used for the manufacture of cigarettes. The tobacco crop of 1918, while it did not contain as much bitterness as the crop of other seasons, yet there was some bitterness in it.

Prospects for the disposal of the crop of 1918 for a time looked very favorable. Growers with all the right expected to realize a price of a dollar to a dollar and fifty cents per pound for their crop, and they would probably have continued to receive high prices had it not been for the cessation of the war.

The armistice was signed in November and as early as in December tobacco in large quantities commenced to come to New York port, with the result that no price was offered for California tobacco.

In Yolo County 30 acres were planted in 1918, which produced 24,000 pounds of Cavala leaf tobacco, which was sold at \$1 a pound; in 1919 the same grower planted 200 acres which produced about 200,000 pounds of the same quality.

In Placer County 20 acres planted between Newcastle and Penryn is reported to have produced about 8,000 pounds, which was sold at New York for \$1.45 per pound. In Santa Clara County 50 acres near Mountain View averaged 1,000 pounds per acre, which sold at from \$0.85 to \$1.25 per pound. There were about 10 acres in Tulare County, but details are not available. A small acreage was planted in Butte County in 1917, but the crop was destroyed by fire. None was grown in 1918, but about 40 acres has been recently planted.

#### CALIFORNIA TOBACCO IN 1919.

Since the end of the war in November, 1918, there has been little demand. Prices have declined to below the cost of production, and in consequence the acreage has decreased considerably.

In Fresno County because of the lack of market for the 1918 crop there were not more than 50 acres planted in 1919; the yield was estimated at about 35,000 pounds, and the price paid for the 1918 and 1919 crops ranged from 30 cents to 50 cents per pound. In Butte County about 18 acres were raised near Oroville. In Tulare and Santa Clara counties, the cultivation of the crop was abandoned.

Yolo County produced the largest crop, one grower having 125 acres in Turkish tobacco which produced a little over 100,000 pounds, and in reporting it he sums up the present situation as follows:

"We have up to the present date been unable to dispose of our last year's crop and it is at the present time in a fireproof warehouse in storage. This tobacco grown in Yolo County can and does compare in a very favorable way with the crops that are grown in Macedonia and the countries surrounding it.

Last summer we had some of this same tobacco made up into cigarettes which proved to be just as good in flavor and quality as any of the higher class cigarettes that are at present manufactured in this country. There is no doubt but that California grown tobacco if given the proper treatment can and does compare and even surpass in quality, flavor and weight much of the tobacco that is imported to this country from abroad and were it not for the large American tobacco interests that are trying in every possible way to discourage the growers in this state the tobacco crop would in all probability be one of the greatest and the best paying that is raised in this Golden State. It is a proven fact that soil which is not adapted and can not in any other way be used successfully for other crops here in California will make millions of dollars for the growers if they only had the necessary backing and help from the state to protect them against the European growers who, on account of the cheap labor conditions and the other favorable conditions of cheaper growing can undersell the growers in this state.

While we ourselves are not discouraged as greatly as many of the smaller growers who tell me that they are through trying to raise tobacco until they are assured of protection on the market, we are going to do experimenting this year with tobacco that is not irrigated and it is my candid opinion that this will prove even better in every way to the tobacco that is at this time imported to this country.

We shall endeavor to prove the worth of this tobacco, California grown, in competition with any other Turkish tobacco and I feel sure that we will be able to do this to the satisfaction of all the most critical users."

#### United States Acreage 1919.

State and rank in production	Acreage	Production, pounds	Average per acre.
Kentucky -----	550,000	456,500	830

## BEANS.

Beans have become one of the most important vegetable crops in the state.

During the war prices fluctuated greatly, and in 1916 the market prices were the highest on record, ranging from \$4.25 at the beginning of the season to \$15.50 per hundred pounds. The average price on the entire crop was about \$7.50 to the grower, re-cleaned; in 1917 prices continued good, but later, in 1918, prices had a heavy fall and a large quantity remained unsold, the demand being small.

The California bean situation is now slightly better. As a result of the scarcity and high prices of potatoes, consumers are taking advantage of the low price of beans and are using them as a substitute. Beans are served in place of potatoes in practically all the restaurants and cafes.

California bean shippers are reported as meeting considerable competition from oriental imports. There were 4,792,456 bushels of beans and lentils, valued at \$17,526,911, imported into the United States during the calendar year 1919, of which Japan furnished the greater portion.

Beans are packed in sacks of varying weights, depending upon the varieties. Blackeyes are lighter than some others and are generally packed in sacks of from 75 to 80 pounds; pinks in sacks of 85 or 100 pounds; white beans in sacks of 90 or 100 pounds.

The other varieties of beans are grown mostly in the delta region of the Sacramento and San Joaquin rivers. The pink variety is grown generally in all the bean sections of California; the large white or Lady Washington in the Sacramento and San Joaquin River sections; the Blackeye is in reality a cowpea and is grown all over the state, but principally in the southern counties of Ventura, Riverside, Los Angeles, Orange, and San Diego; and they are also grown in the San Joaquin Valley. The bayo is not grown extensively, and is produced in a limited area of the choicest river bottom lands in the Sacramento and San Joaquin Valley sections; the small white, or navy bean, is a late variety and grown mostly in the coastal counties of Monterey, San Luis Obispo and Santa Barbara. Large quantities are shipped to Boston, where they are prepared as "Boston baked beans."

## Lima Beans.

Lima beans are only grown in any quantity in five counties, and have come into great favor in recent years. They were first cultivated in Carpinteria Valley about forty years ago, and after 1884 the growing extended. The bulk of the crop is raised in Ventura County; Orange, Santa Barbara, Los Angeles and San Diego counties being next in order. San Diego County, however, is increasing its acreage in lima beans very fast. Some of the best sections yield 40 to 45 sacks per acre. The average yield is 14 sacks of 80 pounds, or 1,120 pounds to the acre, but in the best sections 35 or even 40 sacks of 80 pounds to the acre have been raised.

In Ventura County the yield is not less than twenty 80-pound sacks to the acre, whereas 12 sacks is considered a good yield in Orange County. The commercial production of dried lima beans is practically confined to the southern coast district of California, very few being produced in other states. In October, owing to wet or damp weather, considerable damage was done in the southern districts to small white beans and lima beans, but the loss was more than made up in price, as the market at the beginning of the season ranged from \$4.25 to \$15.50 per 100 pounds later.

#### Castor Beans.

Castor beans were first grown in California over forty years ago, without profit, and until recently have never been profitable since that time. They are not edible, either by man or stock, their only use being for making oil, and hitherto there have been no mills in the state making castor oil. Between 1860 and 1900 the castor bean was an important crop in certain sections of Oklahoma, Kansas, Missouri and Illinois, but during recent years its culture has been practically abandoned. The decline of the industry in the United States is attributed to the growing importance of other crops and the reduction in prices brought about by importations of castor beans from India.

Yields of 30 to 40 bushels per acre have been reported from Florida, South Carolina, Georgia, Texas and California. In the Middle West yields of 15 to 25 bushels per acre have been reported under favorable conditions.

In the United States castor beans are used in quantity only by manufacturers of castor oil. The principal castor-oil mills are located at Jersey City, N. J., Buffalo, N. Y., Toledo, O., and Grand Rapids, Mich. In general, the equipment and operation of a castor-oil mill resembles that of a cottonseed-oil mill or linseed-oil mill, but special and expensive equipment is necessary for the proper extraction of the oil from the castor beans. The best grade of oil is obtained from the beans by hydraulic pressure.

In response to an appeal to raise castor beans during the war, California produced about 13,000 bushels of 46 pounds which were taken by the War Department at \$4.50 per bushel, it being required for airplanes. Since the end of the war they have not been raised as a commercial crop in California.

#### Soy Beans.

North Carolina and Tennessee are the two leading states in the production of soy beans, but they are not yet grown in California. Soy beans were introduced into the United States as early as 1804, but it is only during the last decade that it has become a crop of much importance. These beans have been used for centuries as a staple article of diet in China and Japan and are coming to be used more generally in this country as consumers learn their food value and palatability. The fact that they contain no starch makes them valuable

for invalids who can not eat starchy foods. These beans may be grown easily in practically all sections of the country where corn is grown and give heavier yields than most other beans.

Soy beans have been so important for other purposes that until recently they have attracted little attention for food purposes in this country. They are now coming into their own for that purpose, however, and the acreage of soy beans has increased steadily in recent years. The dried beans may be purchased now in a number of markets in various parts of the country, often under the name of togo beans.

Where dried soy beans are available they may be baked with or without pork, like navy and other beans.

Dried soy beans have been canned in considerable quantities during the past season, baked with pork, and are on sale in this form in numerous markets. Canned green soy beans, which may be compared with lima beans, also are on the market in some sections of the country. Both these canned products yield as high a proportion of energy and a higher proportion of protein than the canned beans with which they are most closely comparable, and so are more nourishing. They are not generally used as a human food in this country, although perfectly edible.

#### Soy Bean Oil Imported 1914 - 1919.

Year ending June 30	Pounds	Value
1914 -----	16,360,452	\$830,790
1915 -----	19,206,521	899,819
1916 -----	98,119,695	5,128,200
1917 -----	162,690,235	11,410,606
1918 -----	336,824,646	32,827,460
1919 -----	236,805,005	28,032,683

#### Horse Beans.

These beans are valuable as forage, as green manure, and as a vegetable. The high yield and quality of this crop, as demonstrated in the experimental and commercial field on the Pacific Coast, together with its high feeding value, indicate that it can be used to advantage much more extensively than is the case at the present time.

1919 -----	4,015,860	15,957,655	4,484,220	25,175,154

†In the exports dried peas are included in the total with beans until 1917.

Of the imports Japan sent the largest quantity or about 3,600,000 pounds, Chile about 600,000 pounds, and Canada 350,000 pounds.

The beans that have increased in production mostly are the Tepary and Baby lima. The Tepary is not popular with the trade in general, but the Baby lima is fast becoming a staple bean. This variety of bean heretofore has been used principally as a canned bean; but it now appears as if it is destined to be in good demand as a dried bean.

While beans are put up in many different size bags, the 1919 crop was mostly put up in 100-pound weight bags, and it is only a matter of a few years until all beans will be put up in bags that will hold 100 pounds net, and of heavier burlap than the smaller bag is made of.

## PART VI.

## VEGETABLES AND NURSERY PRODUCTS.

**Leading Vegetable Districts and Acreage; Asparagus, Artichokes, Brussels Sprouts, Cabbages, Cucumbers, Cantaloupes, Cassabas and Watermelons, Celery, Lettuce, Onions, Potatoes, Tomatoes, Rhubarb; Strawberries; Shipments in 1919; Mustard Seed; Dried Vegetables; Canned Vegetables; Licorice; Ginseng; Flowers, Nursery Products and Seeds; Cork, Tan Bark, and Tanning Extract.**

## LEADING VEGETABLE DISTRICTS OF THE MOST IMPORTANT CROPS.

**Artichokes.**

Globe artichokes are grown in a small way in various parts of the state, but the extensive commercial production is done in San Mateo County, exclusively.

**Asparagus.**

Probably by far the largest asparagus district in the United States is located in the San Joaquin-Sacramento delta. Aside from this delta section the Imperial Valley is the only car lot shipper.

**Brussels Sprouts.**

Brussels Sprouts are grown extensively in San Mateo County.

**Cabbages.**

Cabbages for commercial shipment are confined almost entirely to Los Angeles, Orange, Imperial, San Mateo, San Diego, Ventura, Sacramento, and San Joaquin counties, the bulk of the spring shipments coming from the two counties first mentioned.

**CANTALOUPE, OR MUSKMELONS.**

It is not realized, generally, by cantaloupe growers, to what extent the commercial production of this fruit has advanced during the last ten years in all the states where they are raised. California is by far the largest producer. The Imperial Valley is the earliest and probably the most important muskmelon-growing district in the United States today. The crop is now grown commercially in Imperial, Stanislaus, Los Angeles, Riverside, San Joaquin, Tulare, Kern, Merced and Madera.

The Turlock district in Stanislaus County, in the San Joaquin Valley, produces large quantities, and the district is notable in that it is the only Western muskmelon section not depending upon surface irrigation. The crop was not generally very profitable prior to 1915.

In 1919 the acreage in California amounted to 25,560; of this number Imperial Valley had 14,000 acres, the largest growing area being

around Brawley, Los Angeles and Riverside counties 1,200, Tulare County 480, and San Joaquin Valley exclusive of Tulare County, 9,880. The total acreage in 1920 is estimated at 31,350 acres. The average production is about one-half car per acre; 336 standard crates make a carload. The San Joaquin Valley crop centers at Turlock, with scattering acreage from Madera to Manteca, but the bulk of the acreage is between Ceres and Livingston. In the Imperial Valley the season opens the latter part of May, and in the San Joaquin Valley about the middle of July.

Shipments from Imperial Valley, 1909 - 1919.

	Carloads		Carloads
1909 -----	1,411	1915 -----	4,448
1910 -----	1,621	1916 -----	4,617
1911 -----	2,580	1917 -----	5,041
1912 -----	2,887	1918 -----	4,402
1913 -----	3,502	1919 -----	7,830
1914 -----	4,722		

## Cassabas and Watermelons.

Cassabas are grown commercially in Los Angeles, Orange, Imperial, Stanislaus and Tulare counties, the acreage being fairly evenly divided.

Watermelons are grown commercially in Tulare, Fresno, Merced, Imperial, Riverside, Los Angeles, and scattering counties.

In 1915 California had 5,503 acres in watermelons, and the United States 96,508 acres.

## Lettuce.

About half of this acreage is in Los Angeles County; Imperial County ranks second and the balance in other counties.

## Onions.

The onion crop the last few years has not changed much. San Joaquin, Contra Costa and Santa Barbara counties are the leading producers of onions. The total acreage and production the last six years has been as follows:

Year	Acreage	Yield per acre, bushels	Total production, bushels
1914 -----	9,924	400	3,969,600
1915 -----	8,128	375	3,048,000
1916 -----	5,300	348	1,844,400
1917 -----	10,412	180	1,874,160
1918 -----	8,200	350	2,870,000
1919 -----	8,440	324	2,775,000

The main crop of late onions is grown in the San Joaquin delta. The production of the Bermuda type of onions is more restricted, being grown commercially in Riverside and Imperial counties only.

**Rhubarb.**

The commercial growing of rhubarb is very limited. Aside from the districts which grow for canning and shipment in mixed cars, Alameda County is the only county which ships in car lots as a general practice.

**Potatoes.**

Potatoes are more widely adapted to local conditions than some of the other crops, but the production of early potatoes on a commercial scale is restricted to districts which are relatively less frosty. The largest producing district for potatoes in the state, which is located in the San Joaquin delta, produces a small proportion of the early crop.

The early potato districts of the state are limited to a few counties which have favored locations suited to early planting and rapid growth. Out of 58 counties in California, only 10 are important as producers of early potatoes.

**Tomatoes.**

The production of tomatoes has increased so much in recent years that it has become an important crop. The season is from about June 15 to October 1.

Tomatoes are quite widely grown for canning, but the shipping districts are much more limited. While tomatoes are shipped in car lots from Merced, Sacramento, Santa Clara, Alameda, Yuba and San Joaquin counties, over 90 per cent of the shipments originate in southern California, principally from Los Angeles and Orange counties, but also from Imperial and San Diego counties.

**Strawberries.**

Strawberries are grown for the markets of San Francisco, Oakland and other cities in several of the central coast counties, but the principal districts for the distant shipments are in Sacramento and Los Angeles counties. Shipping districts of secondary importance are in Imperial, Placer, Fresno, and Siskiyou counties.

\*Estimated by the California Vegetable Union.

## TRUCK CROPS IN 1918.

The normal annual production of truck crops for shipment from California amounts to between thirty-five and forty thousand cars. The normal annual production of vegetables grown for canning in California amounts to about 7,000,000 cases.

Included in the list of truck crops which are important in this state are a number of the staple vegetables and several California specialties. The climatic conditions in this state make possible the growing of crops which are not grown so extensively elsewhere and the shipment of certain products at a season when they will meet with little competition from other sections.

*Artichokes.*—Enjoying a practical monopoly of the trade in the large Eastern markets, the California artichoke is one of the leading vegetables grown in the central portion of the state for shipment during the cooler part of the year. Lying along the coast and extending into the coast valleys and canyons of San Mateo County, 4,200 acres of artichokes are under cultivation and constitute the chief crop of the district. Covering a narrow strip of land twenty miles in length from Montara to Pescadero artichoke fields are to be seen on the rich loam and clay loams south of San Francisco. The production of artichokes is thus the principal agricultural enterprise centered in the Half Moon Bay District, and as the market for the product expands artichokes will become more conspicuous on the Pacific Coast.

Three hundred and sixty-six cars were shipped East during the season 1918-1919.

*Cauliflower and Broccoli.*—There are but few districts in the United States which produce carlot quantities of cauliflower, and shipping records for 1918 show that California shipped more than twice as many cars as any other state. The California acreage and shipments for the past three seasons has been as follows:

Locality	1916-1917		1917-1918		1918-1919	
	Acreage	Cars	Acreage	Cars	Acreage	Cars
Southern District .....	3,200	1,050	4,800	1,544	3,450	1,164
Central District .....	1,100	604	1,600	629	1,300	420
Total for state.....	4,300	1,654	6,400	2,173	4,750	1,584

The southern district is almost all included in Los Angeles County. The principal acreage in the central district is in San Mateo County. San Francisco County, Alameda County, Sacramento County, and Contra Costa County have also contributed to the commercial output.

*Celery.*—While the commercial production of celery has been established in California for more than twenty years, seldom, if ever, in that period has the price per crate to the grower been so high as during the season 1918-1919.

Celery is an important crop and was formerly grown on a large scale in Orange County, but owing to the blight it has ceased to be a commercial crop in this county, the growers turning to lima beans and sugar beets, which are more certain and less expensive to raise.

A large quantity is raised near El Monte, in Los Angeles County, and also a large acreage near Stockton, in San Joaquin County, and also in Contra Costa and Sacramento counties.

The counties where celery production is commercially important are as follows: Contra Costa, Sacramento, Los Angeles, San Joaquin, Orange, San Diego, Alameda, Santa Clara, Monterey, and Santa Cruz.

The celery acreage of California in the commercial districts for the past three seasons has been as follows:

Locality	1916-1917	1917-1918	1918-1919
Southern California -----	1,100	1,450	930
Central California -----	3,352	4,032	1,960
Totals -----	4,452	5,482	2,890

The straight car shipments for the season 1918-1919 were as follows:

Locality	Cars
Southern California -----	377
Central California -----	1,103
Total -----	1,480

#### Cucumbers.

Of the number of factories reporting cucumbers the product of which was manufactured, Michigan is far in the lead over all others, having 176 factories in 1918, with 31,534 acres; Wisconsin second with 9,109 acres, and Indiana third with 5,659 acres. California had five factories and 794 acres. Cucumbers are grown for shipment in Los Angeles, San Diego, Yuba, and Alameda counties.

#### Peppers.

*Chili Peppers.*—The commercial cultivation of chilis is almost wholly confined to a small territory in Southern California, between the mountains and the sea. Los Angeles and San Diego counties grow small areas, but the bulk of the chili peppers produced in the United States are from Orange County.

The crop last year was estimated as follows:

Products	Acreage, 1918	Average yield, pounds	Total production, tons
Mexican chili -----	2,000	1,400	1,400 dried
California chili -----	1,200	1,300	780 dried
Sweet peppers (pimientos) -----	2,100	7,000	7,350 green
Total acres -----	5,300		

*Lettuce.*—The scale upon which lettuce is being grown in California it little appreciated. Thousands of acres are planted to the crop every year and many fields are utilized to grow two crops in one year. The large daily shipments from Imperial Valley and the long shipping season of Los Angeles County are features of California's lettuce

production. The normal yield is 300 crates per acre, averaging four and a half dozen each.

**Onions.**—The area of onions in California has more than doubled since the last census was taken. In 1909 there were 4,391 acres of onions grown in 47 counties. Acreage figures for counties are not available, but the acreage harvested from the ten most important counties amounted to 12,112 in 1918.

Onions are grown incidentally in many districts of the state, but in the Coachella Valley of Riverside County and the San Joaquin Delta of San Joaquin and Contra Costa counties they are one of the most important crops.

Onion Crop of 1918 - 1919.

**Peas.**—As a pea-growing state, California has certain climatic advantages, and in the Imperial Valley the state has the earliest important pea-shipping district in the country. Following the Imperial Valley, Los Angeles, Alameda, Santa Clara, Ventura, and San Luis Obispo counties furnish supplies for shipment. San Diego and Orange counties have pea-growing districts still earlier than Imperial, but they have not yet developed into shippers of straight cars. San Mateo County is the latest producer of peas in the state. Most of the peas for canning are grown in Alameda, Santa Clara, Stanislaus, San Joaquin and San Mateo counties.

## Potatoes.

The Irish potato is the most widely and extensively grown truck crop in the United States. Despite the fact that the per capita consumption of potatoes has not yet reached the point in this country which it has reached in Europe, the product is of great economic importance as a daily food of the nation.

In California since the earliest days of American settlement, the potato has been popular in an agricultural way, and as the Western country has developed the commercial importance of the potato in this state has increased.

The carlot shipments from California in 1918 as reported to the Bureau of Markets amounted to over 10,000 cars, and the annual value of the crop to the growers of the state represents several millions of dollars. In point of acreage and volume shipped, the potato has so far held first rank among the extensive truck crops of California.

Seven counties in the state have shipped out over 100 cars each. These counties ranged in the order of their importance as producing districts are San Joaquin, Contra Costa, Los Angeles, San Mateo, Sacramento, San Bernardino and Orange. Thirty-four other counties contribute to the carlot movement, among which the most prominent are Santa Cruz, Monterey, Kern and Riverside.

Potatoes grown for the early markets of California cities are planted on the relatively frost-free slopes and elevations of the Coast Range. Those grown for early summer shipment to Western markets are produced mainly in the coast valleys of Southern California. The main shipping and storage crop of the state are chiefly from the reclaimed peat lands of the San Joaquin delta.

The use of large bodies of newly reclaimed peat lands in the San Joaquin Delta for potato production on a large scale has been the chief factor in maintaining the yield of the commercial crop at the level which it now holds. Yet, the yields on these lands decline very rapidly with continued cropping, and since practically all of the area has now been brought under cultivation, other methods of getting big yields must now be practiced.

The usual yield of potatoes on newly reclaimed peat lands of the San Joaquin Delta exceeds 16,000 pounds per acre. The usual yields on the same lands after a few years of potato cropping is about half as large. The usual yields on the valley lands of Southern California run from 4,000 to 8,000 pounds per acre. The usual yields of extra early sorts on the nonirrigated slopes of the Coast Range are from 2,500 to 3,000 pounds. In dry seasons they fall far below this figure.

*Rhubarb.*—One of the few perennial truck crops grown commercially in California and one of the earliest products shipped East from the Central part of the state is rhubarb. There are several counties in the state which grow an acreage of rhubarb, but Alameda and Los Angeles counties are the only ones which ship East in quantity. The former has about 500 acres and the latter about 150 acres of rhubarb. Santa Clara County also grows the crop, but most of it is consumed locally or used by canners as in the other counties which do not contribute to Eastern shipments. A normal yield is from two hundred to three hundred boxes per acre of 40 pounds each. The principal

varieties grown are Strawberry and Winter Crimson. Carlot shipments usually start the first part of March and amount to 150 cars in a normal season.

*Spinach.*—The canning of spinach in California was at one time believed to be impracticable because of the difficulty of removing the grit, and also because of the highly perishable nature of the product which necessitated express shipping.

The canning of spinach was made possible, by the invention and use of special machinery for washing the leaves. The possibilities of shipping the product were brought out following a freeze which destroyed the crop in competing districts, and the opportunity to grow the crop for seed was presented when war time conditions cut off European sources of supply and opened up new markets for California.

Not until the season of 1917-1918, however, did commercial spinach production become really important. It was then that the first large crop of spinach was grown for canning; that the first important Eastern shipments of spinach were made in the fresh state, and that the first extensive area of spinach devoted to seed production was grown.

#### Mustard Seed.

The mustard crop produced in 1918 was very light on account of a smaller acreage being planted. It is estimated that the entire crop amounted to about 8,000 bags, being divided as follows: 1,500 bags of yellow and the balance Trieste seed.

The prices realized for mustard last year were exceptionally high, Trieste sold as high as 20 cents and the yellow as high as 25 cents per pound. This, of course, was caused on account of war conditions, no seed being imported from Europe and the growers took advantage of the situation, but the trade bought sparingly on account of the high prices.

The yield last year per acre was very good as weather conditions were favorable, although there would have been a larger acreage planted were it not for the fact that the rain held off too long and it was too late to plant the seed.

Most of the mustard seed is raised in Santa Barbara County, near Lompoc, but there is a small acreage in other localities.

The acreage planted in 1917 amounted to about 3,500 acres, and the yield averaged about six bags per acre, which was less than one-half of a normal crop. A fair average crop of mustard is about 1,500 pounds per acre. The reason of the short crop was on account of no late rains in the spring of the year, which is very essential for a mustard crop.

Judging from the quantity of seed sold, the acreage planted to mustard in 1919 around Lompoc and other localities amounted to about 15,000 acres, divided as follows: 10,000 acres of Trieste or red mustard and 5,000 acres of the yellow mustard. The acreage, however, has been increased considerably in the Salinas Valley this last year and some new localities are also experimenting in growing mustard.

It is almost next to impossible to make an estimate of the yield on account of the difference in the rainfall in the different sections where mustard is planted. As an instance, in Lompoc Valley proper there was only about 8 $\frac{3}{4}$  inches of rain for the entire season while some few

miles distant, closer to the mountains, the rainfall amounted to as much as 14 inches for the season. The yield was about 5 bags per acre, but this may be reduced considerably as very much on some of the acreage will never be harvested.

#### THE NEW DRIED VEGETABLE INDUSTRY.

Dried vegetables, although not new to European countries, were practically unknown to this country until the advent of the war. There are now ten vegetable drying plants in California and Oregon, and more are under construction. A great impetus was given to the industry when the War Department contracted for \$1,000,000 worth of evaporated vegetables for use of the soldier abroad. In addition to the purchases made by the government, a strong and increasing demand has sprung up for the product.

The vegetables used for drying are practically all grown in the immediate vicinity of the drying plants, thus facilitating the picking and handling of the product and resulting in securing absolutely fresh stock. Practically all of the vegetable drying plants were formerly hop driers, and very few changes were needed to adapt them to their new use.

In the drying plants are processed practically every kind of vegetable, fruit and berry suitable for dehydrating, and a vast superior quality of food is produced. The dried vegetables intended for use in the United States are packed in paper cartons, protected against moisture by waxed paper. California, with its long growing season, and climatic conditions conducive to large and superior crops, is admirably adapted to the growing and dehydration of vegetables.

Variety, 1918	Pounds	•
Potatoes -----	4,500,000	7
Onions -----	350,000	12
Carrots -----	200,000	10
Turnips -----	80,000	16
Spinach -----	80,000	20
Cabbage -----	25,000	20
Sweet potatoes -----	8,000	6
Celery -----	5,000	18
Rhubarb -----	10,000	20

\*In order to obtain the number of fresh pounds, multiply the dry weight by these figures.

The above figures include some products from Oregon and British Columbia, but about 75 per cent of the above were actually dried in California.

A large amount of the raw product, particularly potatoes, were bought outside and shipped into the state.

Dehydration of fruits and vegetables in California was largely an outgrowth of war conditions. In the year 1919, with the war contracts filled, the industry assumed a much smaller aspect but it might be said to have attained a solid commercial foundation.

In addition to the long established industry of apple evaporation, considerable was done in the way of improving processes for the drying

of fruits by artificial means and in a number of plants emphasis was laid upon a term "dehydration" as applying to a new process.

The estimated production of dried vegetables for 1919 for all plants in the state is as follows:

Variety	Quantity, pounds	Number of pounds fresh to equal 1 pound dried	Value
Potatoes .....	38,000	7	\$12,000
Mixed soup vegetables.....	280,000	10	130,000
Brussels sprouts .....	3,000	12	3,000
Cabbage .....	40,000	16	20,000
Carrots .....	70,000	10	25,000
Celery .....	20,000	18	15,000
Onions .....	40,000	12	28,000
Rhubarb .....	1,800	20	1,600
Spinach .....	20,000	16	14,000
String beans .....	3,000	12	3,600
Tomatoes .....	2,600	25	2,600
Turnips .....	40,000	16	13,000
Parsnips .....	20,000	10	8,000

*Dehydrated Fruits.*—Not counting wine grapes, prunes or apples, it is estimated that a total of 450,000 pounds dry weight of fruit was dehydrated. Of this approximately 150,000 pounds represented pears, 140,000 pounds represented peaches, 120,000 pounds represented apricots and the balance represented berries, plums, etc.

There were on January 1st, 1920, not counting evaporators and grape and prune dryers, approximately 18 plants in California in this industry. A great many small plants are being constructed or contemplated and it is evident that the industry is a permanent one.

The duty on all kinds of imported preserved vegetables is 25 per cent ad valorem.

## Licorice.

This plant is cultivated throughout the warmer parts of Europe, and to some extent in California and Louisiana, and there is much suitable ground in this state where it might be grown profitably. At present Russia supplies practically the whole world with licorice.

This article a generation ago was known and used mainly for its medicinal properties, but has since found other and wider applications, particularly in the tobacco industry of the United States and Canada, which consumes annually many thousand tons of licorice. The amount of licorice root imported varies considerably. Previous to 1914 it was free; in that year 115,636,131 pounds were imported, in 1917, 59,400,224 pounds, valued at \$2,190,882, and in 1918, 26,982 pounds, valued at \$1,853,927, were imported. In addition to this a considerable quantity is imported in the form of extracts and paste.

## Peppers—Pimientos.

The Spanish sweet pepper or pimiento is cultivated largely in Spain where the highest grade come from Valencia, where they are also canned in large quantities. It is also grown largely in Jamaica, and is known in many markets as allspice. An essential oil produced from the seed is used for medical and perfuming purposes. There is the large, green, mild variety and the red and fiery. In the California markets the two kinds or conditions stand side by side.

In 1918 there were about 60,000 cases of chili in 5-ounce cans, 72 to the case, packed in California, and about 90,000 cases of pimientos in 8-ounce cans of 100 to the case. Practically all of this raw material was grown in Orange County, a little in Los Angeles, and a very small quantity in San Diego.

The sweet peppers are used for canning almost entirely. The California Long Red or Anaheim chili is used for canning, but principally for drying. The Mexican variety is used entirely for drying.

## GINSENG IN CALIFORNIA.

Many demands are made for information regarding the cultivation of this plant, as some farmers are under the impression that owing to its high price it must be an exceedingly profitable crop, but it offers little inducement for inexperienced growers looking for quick profits from a small investment. The plant takes eighteen months to germinate, and six years to mature; it requires good soil, shade, and careful cultivation. The necessity of preparing root in accordance with Chinese ideas, rather than American ideas of what the Chinese ought to want, must not be forgotten.

Ginseng is only cultivated in small lots.

## Exports of Ginseng from the United States, 1914-1919.

Year	Pounds	Value	Year	Pounds	Value
1914 -----	224,605	\$1,832,686	1917 -----	198,480	\$1,386,203
1915 -----	103,184	919,931	1918 -----	259,892	1,717,548
1916 -----	256,082	1,597,508	1919 -----	281,943	2,057,232

Ginseng is shipped to Hongkong, where a syndicate of Chinese merchants control almost the entire ginseng trade of China, receiving the importations and distributing them throughout the country.

If it is desired to place unmatured American ginseng on the market, the roots should be fumigated with sulphur, which permits of their longer preservation without deterioration. American ginseng is usually imported in its original state. The Chinese buyer assorts the roots according to quality. Some are put into cloth sacks and shaken until the skin becomes smooth, and those resembling the human form are boiled in sirup and afterwards fumigated with sulphur. In this way their value is considerably increased.

The plant reproduces from seed, but the seeds are unusual. They will not germinate until the second season, or about eighteen months after harvesting. During this time they must be watched carefully; they have to be kept moist, but not too wet or they will rot, not too dry or they will lose all their vitality.

After the seed germinates and the little plants begin to grow it takes five years before the root (which is of greatest importance) is matured sufficiently for use.

The transplanting of the small roots is very important, as is also the digging of the mature roots for the market. At the end of the fifth season's growth the roots are marketable.

One result of the end of the war and the gradual return to more normal trade in Hongkong has been a great increase in the traffic in ginseng. The imports during 1919 were more than twice those of 1918, being valued at \$3,478,732 gold as compared with a value of \$1,900,319 the year before. There are no figures as to the volume of the trade, nor are such figures of any worth unless the quality of the root can be indicated. The value of the ginseng imported into Hongkong during the past two years is as follows:

	1918	1919
North China .....	\$406,238	\$614,420
Middle China .....	35,916	1,912
Japan and Korea .....	81,043	158,802
United States .....	1,370,387	2,695,462
Canada .....	5,596	7,537
Miscellaneous source .....	1,139	599
Totals .....	\$1,900,319	\$3,478,732

#### FLOWERS, PLANTS, AND NURSERY PRODUCTS.

The choice of crops by the florist is largely influenced by changes in popular taste, the camellia, which was the most popular flower years ago, having been superseded in recent years by the rose, carnation, violet, chrysanthemum, and lily of the valley. There is also a growing demand for orchids.

The raising of flowers and plants and of nursery products is also of considerable importance in California, 5,816 acres being devoted to them in 1909, and the output being valued at \$3,601,301. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

In 1909 a total of 96,230,420 square feet, or over 2,200 acres, of land under glass was reported in the United States.

In California, 430 farms were reported as florists' establishments, with 1,572,480 square feet under glass.

There is comparatively little land under glass in California, compared with the Eastern States, as the climate does not require it.

As the rose is grown in California in such profusion some experiments might be made to produce the famous "attar of rose," which is the most ancient and attractive industry in Bulgaria, where about 20,000 acres are devoted to rose culture. Nearly all the attar of rose is exported to London, Paris and New York.

In Bulgaria but two varieties of roses are cultivated, the red, "*Rosa Damascena*," and the white, "*Rosa Alba*," which are combined in the process of distillation; but the red rose, which resembles the French "*Rose du Roi*," is richer in perfume and essence than the white. In the Rose Valley, where there are some 20,000 acres of gardens, the atmosphere of the entire district is charged with perfume when the roses are in bloom. During the 12 years prior to the First Balkan War, that is, from 1900 to 1912, the manufacture of attar of roses in Bulgaria attained its highest development. During that period a large number of up-to-date factories equipped with modern steam stills were erected. The total area planted to roses increased to more than 20,000 acres. Owing to the three wars in which Bulgaria has taken part since 1912 the industry of rose culture for the production of attar of roses has experienced a decided setback. It is estimated that the present acreage planted to roses is not more than 15,000.

The average annual production of attar of roses during the period from 1900 to 1912 was about 126,800 ounces. The production fell to 85,000 ounces in 1917, 85,000 ounces in 1918, and 52,000 ounces in 1919, and it is predicted that the present year's yield will show a further decrease.

During the war the stocks of attar of roses remaining unsold increased until they reached a total of about 275,000 ounces, about 40 per cent of which is said to have been of inferior quality. About one-third of this total available stock was sent to the United States early in 1919 in part payment for flour imported from the United States; also some 17,000 ounces were shipped to the United States during the last quarter of the year. It is estimated that the present available stock in Bulgaria hardly exceeds 50,000 ounces worth about \$500,000.

## FLOWER AND VEGETABLE SEEDS IN 1916 - 1919.

Imports of Forage Plant Seeds Permitted Entry into the United States Under the Seed Importation Act.

(Compiled by the Seed Laboratory of the Bureau of Plant Industry, United States Department of Agriculture.)

The growing of seeds has become an important industry in the state, the area in 1916 being upwards of 16,000 acres. Of flower seeds sweet peas are cultivated on a large scale, 1,600 acres being reported in 1916, and upwards of 2,000 in 1917.

The largest acreage is in onion, carrot, lettuce, radish, and spinach, of which there are a very large acreage of each. Other vegetable seeds grown are parsley, parsnip, endive, beet, salsify, chicory, mustard, and celery.

During recent years the acreage in seeds has been increased almost threefold on account of the war. Instead of a few hundred acres of lettuce, radish, onion, carrot, or beet being grown in every case the figures run into the thousands. Quite a large acreage in spinach is being grown, as none can be obtained from the former source of supply in Holland. The largest increase in acreage has taken place in Sacramento, San Joaquin, and Yolo counties, where the bulk of carrot, onion, beet, and spinach crops are being planted.

## Production of Vegetable Seeds in the United States for 1919.

The figures given for 1919 in the following table represent in the main a compilation of reports received from commercial growers giving the estimated (actual wherever possible) average yield per acre and total production of each vegetable seed crop grown by them. Those given for 1918 were compiled from reports submitted in vegetable seed acreage and production surveys.

Kind of seed	Commercial acreage planted		Average yield per acre, based on acreage planted		Commercial production	
	1919, acres	1918, acres	1919, estimated, pounds	1918, pounds	1919, estimated, pounds	1918, pounds
Beans, dwarf snap-----	48,658	72,831	515	401	25,093,000	29,215,515
Beans, garden pole (not including lima)-----	7,957	7,482	540	691	4,395,000	5,166,159

Squash, summer-----	1,153	1,004	195	99	223,000	99,404
Squash, winter-----	2,912	2,534	152	51	443,400	128,385
Sweet corn-----	14,565	14,759	900	807	13,143,000	11,916,892
Tomato-----	3,604	3,892	67	80	243,000	307,815
Turnip, English-----	1,207	936	380	215	456,000	200,783
Turnip, Swede-----	205	279	602	98	123,300	27,312

## Imports and Exports of Seeds.

Year	Imports, value	Exports, value
1914-----	\$20,084,184	\$3,190,745
1915-----	23,054,820	3,861,064
1916-----	33,571,760	3,538,508
1917-----	35,879,665	4,001,700
1918-----	50,846,623	5,656,163
1919-----	35,212,664	7,702,973

The imports include castor beans, flaxseed or linseed, clover, and sugar beet seed. The principal increase in 1918 was in flax and sugar beet seed. The exports include cotton, flaxseed or linseed, clover, and timothy.

## THE CORK INDUSTRY.

The cork of commerce is the bark of an evergreen species of oak (*Quercus suber*) tree, which reaches a height of about thirty feet. It grows in the south of Europe and north African coasts, but principally in Spain and Portugal.

The *Quercus suber* is long-lived and the quality of the bark increases with the age of the tree. Many trees in Portugal are known to be centuries old and their product has been gathered by families through succeeding generations.

There are many cork trees in the San Joaquin Valley, although none of them have been utilized for commercial purposes. Their great value lies in their beauty as shade trees and for ornamental purposes. M. Theo. Kearney planted a number of cork oaks on his magnificent estate near Fresno, which passed at the time of his death to the University of California. James Lick, founder of the Lick Observatory, grew cork oaks at his home place in Agnews and there are 200 trees, now five years old, at the George C. Roeding ranch near Fresno.

The cork oak has all the stately beauties of other varieties but has the added advantage of comparatively rapid growth. Cork oak may never be on a commercial basis in California but it grows well here and there is nothing to prevent some man with a deep vision into the future from founding a new industry.

The first stripping of cork from young trees takes place when they are from fifteen to twenty years old, and is known as "virgin cork," which is used only for tanning purposes, or for rustic work in ferneries, conservatories, etc. Subsequently the bark is removed every eight or ten years, the quality of the cork improving with each successive stripping, and the tree lives and thrives under the operation for 150 years and upwards. The produce of the second barking is still so coarse that it is used only for floats for nets, etc.

## TAN BARK.

This oak (*Quercus densiflora*) is found in southern Oregon and southward to Mariposa County in California. The tree is also known locally as chestnut oak (*Quercus prinus*). This species grows from southern Maine to Maryland, and in the mountains south to north Alabama and Georgia, and west to Lake Erie, Kentucky and Tennessee. According to a report made by the Association of Corkwood Manufacturers of Portugal, the total world production of corkwood is estimated at 180,000,000 kilos, or 396,832,000 pounds, of which 45 per cent is produced in Portugal, 30 per cent in Spain, 5 per cent in France and Italy, and 20 per cent in Algeria and Tunis. For the present Portugal is the largest producer of corkwood, and probably will maintain its position for several years more. In some districts of Portugal the quality of the corkwood is superior to that of other countries.

The greater part of corkwood is used in manufacturing cork stoppers and cork disks. Cork waste is employed in making linoleum, for which purpose virgin corkwood is also used.

Value of Cork or Cork Bark Unmanufactured, Imported into the United States,  
1912 - 1919.

Year	Value
1912 -----	\$3,242,319 00
1913 -----	3,152,070 00
1914 -----	3,851,794 00
1915 -----	2,762,895 00
1916 -----	3,134,884 00
1917 -----	3,870,389 00
1918 -----	3,061,827 00
1919 -----	1,736,102 00

The average cost per ton in 1909, \$10.31, was 73 cents more than in 1908. The highest average cost per ton was reported by California, \$20.06. In the total quantity of bark, etc., used in 1909, eleven out of the twenty-one states showed gains over 1908, the greatest being 9,605 tons in California. Valonia, which is a product of *Quercus agrifolia*, and *Quercus agrifolia*, is the commercial name of the acorn cups of these species of oak, which has a higher percentage of tannic acid than any other known tannic material, containing as much as 40 per cent of acid. The value of tanbark and tanning material imported was \$2,849,553 in 1916, and \$1,287,593 in 1918. The quantity of domestic bark for tanning exported in 1916 was 5,226 tons, valued at \$123,675, and in 1918 194 tons valued at \$5,857. In 1919 there were 668 tons exported, valued at \$47,741.

The greater part of imported cork comes from Spain and Portugal each supplying about half of the above quantities; that from other countries is very small.

*The Eucalyptus Industry.*—The Sydney Morning Herald, in an article urging the development of the eucalyptus industry as a means of employing returned soldiers, quotes a practical distiller in part as follows:

There are scores of different kinds of eucalyptus trees, but only a limited number (about six) are of any commercial value. The two most important varieties are the peppermint and the mallee. Good wages can be made by men working in a small way with either of those species, but anything attempted so far in a large way has not met with much success for many reasons—chiefly because of the difficulty and expense of obtaining large areas of land. With the two species mentioned large areas are necessary because the trees only grow in patches. Thus a distiller who holds a lease of 1,000 acres of land may only have 100 acres that are of any value to him. The mallee gives the best and most valuable oil for medicinal purposes. No mallee, however, can be very profitably worked unless the scrub has been first rolled down and burned. Suckers spring up very quickly after burning, and it is from these that the distiller gets his profit. The mallee is being rapidly killed out where the soil is good for wheat-growing purposes. Firewood is scarce for the same reason, and cartage is becoming more expensive as the cutters go farther afield. None of these disabilities would exist in an enormous belt of mallee in Riverina. There the repatriation authorities could settle a large number of men and bring into profitable use thousands of acres of crown lands at present considered absolutely worthless. The cost would be less per capita than any other means of repatriation so far proposed.

## PART VII.

## HORTICULTURE.

## FRUIT ORCHARDS AND VINEYARDS.

**Principal Counties in Orchard Fruits, Number of Trees and Vines; Apples, Apricots, Dates, Figs, Grapes, Olives, Oranges, Lemons, Raisins and Currants; Small Fruits: Persimmon, Pomegranate, Peach; Fruit Canning; Almonds and Walnuts; New Fruits: Avocado, Banana, Cherimoyer, Guava, Jujube, Loquat, Canned and Dried Fruits; Nuts; Imports and Exports of Fruit.**

## ORCHARD FRUITS, GRAPES, TROPICAL FRUITS, SMALL FRUITS, AND NUTS.

## CALIFORNIA FRUITS.

Year by year the area in fruit continues to expand in nearly all sections of the state.

## Apples.

Apple growing in California is widely distributed. From 100 to 500 acres or more of bearing trees occur in nearly every county in the state, but a very large proportion of the commercial crop is produced in two or three sections. The Pajaro Valley, which includes the southern part of Santa Cruz County and the northern part of Monterey County, perhaps more commonly called the Watsonville district, is the most important apple-growing section in California, the two counties named producing nearly 65 per cent of the entire crop of the state. The Sebastopol section of Sonoma County is the second largest district, that county producing about 16 per cent of the normal crop of the state, and is famous for the Gravenstein apple. In the southern part of the state Riverside and San Bernardino counties produce considerable quantities.

There are two distinct branches of the apple industry in California; one is the growing of early varieties, like the Astrachan and Gravenstein, which are grown mostly in the Sacramento Valley and foothills; the other, the production of winter apples. During the harvesting of the crop in the Pajaro Valley, this industry gives employment to several thousands. The annual shipments of green apples average from 3,500 to 4,000 carloads, and about 150 to 200 carloads of evaporated apples. The two leading varieties are Newtown Pippin and Bellflower. Others are the Red Pearmain, White Pearmain, Missouri Pippin, Baldwin, Rome Beauty, Spitzenburg, Winesap, Langford Seedling, and Ben Davis.

In the production of apples on the Pacific coast, California ranks second. According to the estimates of the United States Department of Agriculture the commercial crop for the last four years was as follows:

State	1916 (barrels)	1917 (barrels)	1918 (barrels)	1919 (barrels)
Washington -----	3,225,000	4,620,000	4,296,000	6,440,000
California -----	1,918,000	1,174,000	1,127,000	1,511,000
Oregon -----	1,285,000	713,000	671,000	1,357,000

The State of New York generally holds the next place after Washington; in 1919 its production was 2,975,000 barrels, and the total for the United States 147,457,000 barrels compared with 169,625,000 barrels in 1918.

In 1918 the estimated tonnage for the Pajaro Valley proper or central section of the so called Watsonville District was 86,000 tons of commercial apples. Of this 61,700 tons were packed and shipped fresh, making 2,468 cars of about 1,000 boxes to the car; 23,100 tons were evaporated, making 3,300 tons evaporated apples and about 1,200 tons were used for canning and cider. The latter estimate for canning and cider stock is low, and might run close to 2,000 tons. These products were shipped from Watsonville station.

From the outlying sections of the Watsonville District, including the shipping points of Aromas, Vega, Aptos and Capitola, there was an estimated tonnage of 16,500 tons of commercial apples, of which 12,500 tons were packed and shipped fresh, making in the neighborhood of 500 cars averaging 1,000 boxes to the car; 3,500 tons were evaporated, making 500 tons of dried apples, and 500 tons were used for canning, cider and vinegar.

The growers received from \$20 to \$35 per ton green for their apples delivered at the packing houses, the average price being about \$27 per ton. The packers received from 90 cents to \$1.75 per box during the packing season, and later the prices advanced to \$2.75 out of cold storage, the average price for the season for all grades being in the neighborhood of \$1.25 f.o.b. Watsonville or shipping point. The total value of the crop and by-products was close to \$3,000,000.00.

In Sonoma County the apple crop was estimated at 550 cars of 600 boxes each; the price paid to growers ranged from \$1.50 to \$2.25 per packed box. There were also about 3,000 tons of evaporated apples shipped at prices varying from 10 cents to 15 cents per pound.

#### Leading Apple Sections of the Country.

In the states east of Colorado the commercial apple crop is packed in barrels, whereas in the western states it is packed in boxes. Three boxes are equivalent to one barrel. The box section gained on the barrel section in 1919, furnishing nearly one-half of the crop. It is said that 31,734 railroad cars were used to move the 1919 apple crop from eight leading box states, as compared with 32,116 cars required in the barrel sections. The world-wide trade in western apples has been built up within the last quarter century.

New York produces about one-fourth the normal commercial apple crop of the country. Its total apple crop had not been exceeded by that of other states until recent years, when the State of Washington out-rivalled it. In 1919 the total Washington crop amounted to 23,190,000 bushels and that of New York to 16,800,000 bushels, as compared with 40,878,000 bushels for New York and 16,491,000 bushels for Washington in 1918. The states next in order and the total number of bushels of apples produced in each in 1919 were as follows: Virginia, 9,950,000; California, 8,640,000; Pennsylvania, 7,972,000; Michigan, 6,484,000; Missouri, 5,773,000; and considerable though smaller amounts from all the other states, with the exception of Nevada, Louisiana, Mississippi, and Florida, where climatic conditions are not so favorable to apple growing.

#### Varieties Produced in Different Regions.

Although apples are produced in great variety in all the states and grown extensively on a commercial scale in all save Nevada and a few of the states far south, certain great regions are famous for particular species.

The Baldwin is the most widely produced, forming 13.4 per cent of a normal crop of all apples in the United States and 31.3 per cent of the New York State crop. Its nearest rival, the Ben Davis, constitutes 13.3 per cent of a normal average crop for the country.

#### Washington and California Lead Western States.

The fame of the western irrigated apple sections has gone around the world in the past ten years. In 1917 the State of Washington passed New York as the heaviest commercial apple-producing state in the Union, showing 20 per cent of the total commercial crop of the United States. Of the Western states, California is second in importance, with its highly productive plantings of Yellow Newtowns and Bellflowers; followed by Oregon, Idaho, and Colorado, all three about equally productive. The famous Hood River region of Oregon grows Yellow Newtown, Spitzenburg, Delicious, and other kinds in great perfection and quantity.

#### Apples, Green or Ripe, 1909 - 1919.\*

(None imported.)

Year	California crop (commercial crop)	Exported	
		Barrels	Value
1909	1,645,000	896,279	\$2,782,007
1910	1,533,000	922,078	3,175,433

†These two years are given to show the changes caused by the war.

## Apriots.

Last year's apricot crop is estimated as about 24,000,000 pounds. The principal drying varieties, especially through Santa Clara Valley and other large producing districts—the Blenheim—and in other outside districts—the Royal—were quite heavily planted and used for drying purposes—with some smattering of Tiltons. Other varieties produced in very small quantities.

Russia took 1,080,353 pounds, valued at \$127,252. This was shipped for the Allies. The quantity in former years has always been small.

**Pears.**

The oldest deciduous fruit trees in California are pear trees. Unlike any other variety of fruit we grow, there is one variety, the Bartlett, which may well be termed the King of Pears, because it meets every demand of shipping, canning and drying. It is of English origin and dates back to the year 1770.

The five leading states in production of pears in 1919 are as follows:

Rank and state	Production, bushels
1. California .....	4,500,000
2. Washington .....	1,700,000
3. New York .....	1,530,000
4. Oregon .....	553,000
5. New Jersey .....	500,000
United States .....	13,902,000

## Pears Exported, 1909 - 1919.

1914 -----	3,000,000	1,402,924			

NOTE.—Dried pears are not shown separately. Pears are mostly exported to the United Kingdom and Canada.

## DATES.

While date trees can be grown wherever the orange is grown, they will not properly mature in any except the hottest and driest portions of the state. According to Dr. J. Eliot Coit, pomologist, California Experiment Stations, the requisite conditions may be found in many places throughout the Imperial, Coachella, and Colorado valleys, and the country around Palo Verde and Blythe, Riverside County. At other places in the state, such as the vicinity of Riverside, Redlands, Fresno, and Oroville, early dates might be grown in a small way for home consumption, or be sold in fresh, uncured condition. While the industry has a very promising future, it should be clearly borne in mind that date culture is a new industry, requiring experience and unusual skill on the part of the grower, and it must be carried out in regions having an extremely hot summer climate, and it must be remembered that to bring date palms into bearing costs very much more per acre than to grow any other orchard crop.

There are more than 500 named varieties of date palms, and 220 varieties have been tested out in this country by the Government Experimental Gardens and private parties.

Less than a dozen of the varieties now being tested seem to warrant planting in commercial quantities—the Deglet Noor, Iteima, Tazizaoot, Hayana, Saidy, Ascherasi, Maktum, Horra, Thoory, and Agrass, being exceptionally desirable, while planting seed of the following, Deglet Noor, Menakher and Medjool is recommended.

The date has a real food value that is not understood by the uninitiated. The Arabs of the Sahara, as well as those of Arabia and Persia, use dates for more than one-third their food. Dates being 56 to 70 per cent sugar, preserve themselves and will keep indefinitely.

While of many varieties, dates may practically be classed as of three sorts—soft, dry, and semi-dry. The Deglet Noor is probably the best of the latter class. Dates are grown principally in the Coachella Valley, in Riverside County. The acreage of dates is so broken up into a number of small holdings that it is difficult to estimate the area, but it now amounts to several hundred acres.

The important feature now in the development of this new industry will be to get offshoots of good varieties. France has issued a decree prohibiting exportation of Deglet Noor offshoots to any countries, with the exception of Tunis and Morocco. This variety can not be secured

anywhere else and such offshoots as can be purchased in this country will be very high in price. There is a question whether offshoots of any varieties can be secured from Egypt in the next three to five years. There are very few varieties from the Persian Gulf region that are worthy of propagation in this country, as very few varieties from Persia have been found that are resistant to the climatic conditions in the two valleys in the ripening season.

Thousands of seedlings are now beginning to produce fruit, and many of them are producing fruit of good quality, and a larger production is hoped for each year, as the seed is pedigreed pollination from selected males and results have been gained already that look very promising for the origination of new varieties here that will help to build up the industry and bring it to a commercial basis much sooner than could otherwise be accomplished.

There is no question but that there will be some very good varieties originated from the seedlings throughout the valley. But, on the other hand, for fruit quality that will sell on the market at good prices and that will carry long distances in the best of condition, the standard varieties such as Deglet Noor, Tazizaoot, Itema, will be the only ones that can be really depended upon until the seeding varieties are classified and standardized as to the quality and shipping resistance.

The Coachella Valley, it is claimed, will produce finer dates than the Imperial or Colorado valleys, owing to the humidity being less than in the other regions. Fruit of good quality for home use can undoubtedly be produced in a large part of the San Joaquin Valley, some parts of the Sacramento Valley, and a warm coastal region, such as that around San Diego.

There are only two methods for the propagation of the date palm, by seed and by offshoot. Seed may be planted from the best varieties, but with no assurance to the grower that he will get a large percentage of commercial dates. Fifty per cent of the trees grown from seed are male trees. These trees produce no fruit but do produce pollen-bearing flowers that the date grower must have in order to pollinate or fertilize the flower spikes when they appear on the female or fruit-producing palms. The grower therefore needs a few select male trees for this purpose.

Any lot of seedlings may afford a few fruiting trees of new and choice varieties which may be multiplied in number by offshoot propagation, and the cultivated varieties of the date world today are all the result of such seedling selection in the past.

The date palm can be grown in a wide range of soils, but it has been demonstrated by the Department of Agriculture and the date growers co-operating with the department that first-class dates can be produced only in the best of soils, which should be a loose, sandy loam, well drained.

The date industry at the present time looks very promising on the one hand while on the other it is rather discouraging that there is such a shortage in offshoots of standard varieties. Men of capital are ready to invest and start plantings of commercial date gardens, but there is no stock available and until there is the industry will probably advance very slowly.

The crop in 1918 amounted to 73,000 pounds or about 36½ tons. Of this quantity 23,000 pounds was from imported stock and 50,000 pounds from seedlings.

The Deglet Noor produced 60 per cent of the crop, the other varieties being Tazizaoot, Itema, Maktum, and Rhars. Almost fifty per cent of the seedling dates were seeded and the pulp ground, making what should be a food product; however, confectioners' prices were asked for the output and a large part remains unsold.

In 1919 the United States date garden at Indio raised 5,054 Deglet Noor shoots each of which were worth \$10 fresh and \$25 rooted.

#### FIGS.

The fig industry of California is annually becoming a more important crop. In 1884 the "White Adriatic" was introduced into Fresno County. Mr. Markarian planted the border of his vineyard to this variety, and ten years later packed figs in his raisin packing house.

The annual production of California, which is the only state that produces figs in commercial quantities, is approximately as follows, but the acreage is increasing rapidly, especially in Fresno County where an extensive acreage has been planted during the last few years. That there is a large and growing demand for this fruit is proved by the size of the imports.

In 1918 the early rains did much damage to figs, reducing the crop to about 9,200 tons.

In 1919, there were an approximate total of 18,000 acres planted to figs, of which about one-fourth were of bearing age. Between 12,000 and 13,000 tons were produced during this year.

Prices Paid Growers 1917 to 1919.

Variety	1917	1918	1919
Calimyrna or Smyrna figs.....	8¢ to 12½¢	12½¢ to 19¢	15¢ to 18¢
Adriatic .....	5¢ to 7½¢	7½¢ to 15¢	11¢ to 13¢
Mission .....	3¢ to 5¢	5¢ to 8¢	8¢ to 9¢

"There are an endless number of varieties of figs. In many instances, on account of the wide distribution of this fruit throughout the world, the same variety may be blessed with any number of synonyms. This is the case with many sorts grown in California today. Not over six varieties comprise the list of commercial varieties for all purposes in California.

Many of the countries whose shores are washed by the Mediterranean sea are producers of figs commercially, but the recognized fig center of the world today is in the Meander Valley, about forty miles distant from Smyrna, Asia Minor. It is here that the Smyrna fig of commerce has been grown for centuries, and the secret of their culture was so closely guarded. It was only after fourteen years of constant and persistent effort on my part that I succeeded in 1890 in producing the first Smyrna figs in the United States by artificial pollination, and ten years later, having succeeded in establishing the *Blastophaga grossorum*, with the assistance of the United States Department of Agriculture, the first Smyrna figs were produced in a commercial way.

The first figs introduced in the United States were brought as nearly as can be determined by the Spanish Padres from Mexico in 1769. They were planted at the San Diego Mission. This fig is still a standard in California.

The fundamental difference between the Adriatic and Smyrna class of figs is that the former matures its fig without the fig wasp, while the latter does not. The Adriatic figs seem to possess all the qualities of the Smyrna so far as general appearances go, but on investigation it will be found that all the seeds are hollow, while in the Smyrnas each seed contains a kernel giving the fig a nutty flavor and a delicious syrupy sweetness found in no other fig.

The great interior valleys of California, with their favorable climatic conditions (there being no rain in the summer months, and the air being both warm and dry), present possibilities which are not equaled in any other part of the world. The output of Smyrna is in the neighborhood of 30,000 tons annually. California produces about 10,000 tons of dried White Adriatic, Mission, and Calimyrna. The United States imports from 16,000 to 20,000 tons annually. The demand for figs for shipping, preserving and drying is growing by leaps and bounds, and it is up to the growers to embrace their opportunities and engage in this, one of California's most promising industries."\*

FIGS, 1909 - 1919.  
(Duty, 2 cents per pound.)

Year	California crop, pounds	Imported

\*Nearly all the figs previous to the war were imported from Smyrna, in Turkey in Asia, about two million pounds from Greece and smaller quantities from Italy and Spain. In 1916 a considerable quantity were imported from Portugal.

Exports of domestic figs are not shown separately in the customs returns, but are included in "All other green, ripe, or dried fruits."

TABLE GRAPES AND ALMERIA GRAPES.

Table Grapes.

The principal localities in the state from which table grapes are shipped are the counties of Sacramento, Placer, El Dorado, San Joaquin, Merced, Madera, Stanislaus, Fresno, Kings, Tulare, San Diego and Imperial. Other counties shipping in limited quantities are Sutter, Contra Costa, Yuba, Colusa, Santa Clara, Los Angeles and Yolo.

\*Roeding's Fruit Growers' Guide, Fresno, 1919.

## CALIFORNIA TABLE GRAPES, 1919.†

From figures furnished by the Southern Pacific and the Santa Fe Railroad Companies, including also tributary lines and those controlled by these two companies, there was shipped last fall (1919) a total of 22,068 cars of grapes. This included both local and interstate shipments of grapes in carload lots. Of these, a total of 8543 cars was wine grapes. The table grape shipments therefore would amount to 13,525 cars.

It is generally conceded that the consumption of grapes locally in California, in addition to small shipments by express and auto trucks amounts annually to about 500 cars, or 7000 tons, at an estimated valuation for 1919 of \$720,000 (\$90 per ton). Finally to complete the tonnage of table grapes, the culls and strippings already mentioned, 40,000 tons valued at \$1,200,000, must be comprised in the total figure. We thus arrive at the following figures for the total tonnage of table grapes after comparing data received from different sources relating to the tonnage of the different varieties of table grapes shipped, and the approximate average price at which they sold f. o. b. cars. The number of cars, tonnage, price and returns for each may be tabulated as follows:

*Total Tonnage and Returns Table Grapes, 1919.*

	Cars	Tonnage	Price per ton	Returns
Malaga .....	6,056	84,784	\$60 00	\$7,60,560 00

*Grape Packing in Redwood Sawdust.*

In 1906, Professor A. V. Stubenrauch, Pomologist, and C. W. Mann, Assistant Pomologist in Fruit Transportation and Storage Investigations, United States Government, began a series of experiments in California covering the correct packing and storage of California grapes. Their investigations continued over a period of seven years, during which time all sorts of packing materials and styles of package were experimented with, resulting finally in the discovery that redwood sawdust was as perfect a medium for the preservation of the fruit as could be found. Their experiments in this direction were encouraged undoubtedly by the fact that for many years in Spain grapes have been packed in sawdust for shipment to England and other points, enabling the growers to successfully place upon these markets even the most

†From report of R. L. Nougaret, in charge State Viticulture Service.

tender varieties. In that country the ordinary pine sawdust is the only kind available, and in order to drive away the resinous flavor which might affect that of the grape, it is customary to expose the sawdust in great heaps to the sun of the summer and the storms of the winter, turning the heaps occasionally until all of the sawdust has been so exposed. This process is continued for not less than three years, at the end of which time the material is ready for use.

Several different kinds of pulverized redwood were used, including the dust from planing mills, fine shavings, etc., but the final conclusion was that coarse redwood sawdust, which has been run through a blower, to take out the fine particles and the dust, and a revolving drum, to smooth off the sharp corners and edges, was the ideal material.

Experimental packing with sawdust has been tried with practically all the European varieties grown in California, but the greatest success has been achieved with the Almeria, Cornichon, and Emperor. Undoubtedly there are a number of other varieties less well known and having thick skins that would keep equally well.

It has been found that sound grapes, well selected, of perfect color and maturity, will keep well for from one to three months. There are some examples of perfect keeping for as much as five months, but as a general rule it is safe to say that fruit so packed will be in the best condition for sale and consumption during the holidays, and more or less chance will be taken if it is longer held.

The Emperor season usually opens about the middle of September, and continues in the ordinary year to nearly the first of November. With fruit as commonly packed, immediate consumption is necessary, but with the sawdust packing, it is seen that the selling season can be extended for two or three months, making possible far better distribution, and by limitation of daily offerings enabling the dealer to realize much better prices.

No considerable quantities of grapes were packed in this way for shipment until 1912, when approximately thirty carloads were forwarded. Since that time shipments have constantly increased. Generally speaking, this style of pack has been found exceedingly satisfactory.

#### Almeria Grapes in Australia.

Almeria grapes are another fruit that we ought to be able to produce in California under suitable conditions, but the attempts made have not yet proved successful. Both the Almeria grape and Greek currants are grown with success in Australia, and the Government Viticulturist of Victoria, Australia, expresses his surprise at these conditions, saying: "I note that you still import over a million dollars' worth of Greek currants. It seems strange that you do not grow any locally, as the Zante currant should do well in the California climate. It thrives admirably in the irrigation districts of Northern Victoria, yielding as much as three tons of dried currants to the acre, whereas the Sultana, which also does very well with us, rarely exceeds two tons.

"You refer to the vine as 'a peculiar dwarf grapevine.' It could, of course, be trained thus, but here we grow it on very large trellises, planting the vines as much as 15 feet apart. The Zante was not a success here until cincturing, or ringbarking, was introduced a dozen years ago.

This operation is performed on the main stem during, or immediately after, blossoming. Without it the bulk of the fruit drops off. Since cincturing proved a success the Zante was very extensively planted, and we now produce more currants than the commonwealth can consume.

"I am rather astonished that the Almeria grape has not proved satisfactory with you, since it is doing splendidly with us. You may, perhaps, have seen some Victorian-grown Ohanez grapes (the Almeria variety) at the Panama Exposition. It keeps here in good condition for six months and over in cool store. It has occurred to me that a peculiarity in its method of fruiting may have something to do with its non-success in California."

A bulletin issued by the United States Department of Agriculture on the raisin industry confirms this view regarding Greek currants. It states in part: "Currants have not so far been grown to any great extent in this country, not because they will not thrive here, but no one has engaged in their culture seriously enough to determine the right way to grow, prune and train them. \* \* \* The Department of Agriculture for some years has made experiments in the growing of currant varieties of grapes on different resistant stocks and practiced on them different methods of pruning and training, with very gratifying results, and strong hopes are entertained of starting and developing this special line of the raisin industry. There seems to be no reason why this country should not produce the 35,356,000 pounds, or \$1,206,000 worth of currants it has for ten years been annually importing."

#### IMPORTED ALMERIA GRAPES.

These table grapes come from the province of that name in Spain. They come into competition with late-season shipments of California Tokays, Cornichon and Emperor grapes. Cuttings of the Almeria grape have been imported into California, but the result so far has not been satisfactory.

The season for importations is from September 15 to December 15, the bulk of which is received at New York, although about one-fifth go through Boston, Philadelphia and New Orleans. The fruit is put up in barrels, the gross weight, including cork-dust, being from 60 to 70 pounds, and the net weight of a barrel about 45 pounds. California Malagas come in the most direct competition with Almeria grapes, being of a similar color and somewhat similar flavor, although not near as good as a keeper.

#### Almeria Grapes Imported, 1909 - 1919.

(Duty, 25 cents per cubic foot capacity of barrel or packages.)

Year	Cubic feet	Value	Year	Cubic feet	Value
1909 -----	1,203,419	\$1,575,620	1915 -----	1,323,928	\$1,523,547

1914 -----	1,334,163	1,599,969			

### THE PERSIMMON.

The persimmon of the Southern States was introduced into California in early days. The widely distributed species, however, is the Japanese, of which many varieties are now fruiting in different parts of the state. Perhaps the largest single persimmon-producing proposition in California is that of Ira Avery in Placer County. The Tane Nashi variety pays best on account of its size and earliness.

In this country there are but two varieties in cultivation, viz.: the American and Japanese. The latter, on account of their attractive appearance and large size, are destined to be extensively planted as soon as their commercial importance is more appreciated. The impression that the fruits must be on the verge of decay before they can be eaten has militated against their sale. There is much variation in the character of the fruit. Some varieties are not astringent at all and are edible in early autumn, while still hard and green.

Persimmon culture commercially centers in Japan. California offers great possibilities in the culture of this most delicious fruit. It will adapt itself to a wide range of localities. The fruit will very often hang on until January, providing there have been no heavy frosts and a tree loaded with this deep russet, golden fruit is a sight to behold when all the leaves are off.

### THE JAPANESE OR KAKI PERSIMMON.\*

The Kaki or Japanese persimmon was introduced into California about 1870, and is to be found to a greater or less extent in nearly every county in the state. The tree is easily grown, is practically free from serious diseases and insect pests, and is in most cases exceedingly prolific. The fruit is very attractive in appearance, ships well to both local and distant markets, and is almost universally liked if eaten in the proper condition. There are commercial orchards in Orange, Los Angeles, Tulare, Fresno, Santa Barbara, Solano, and Placer counties. During several seasons past, the fruit has been shipped to the East in carload lots, especially from the Newcastle district, where the largest acreage is to be found.

Although the persimmon tree is deciduous it does not thrive in a cold climate, and some of the first trees brought to the United States died from being planted too far north.

The culture of persimmons on a large scale is hardly advisable at present. For five- and even ten-acre orchards there are possibly good prospects of profitable returns, if anything like the care and attention are given to the trees, the handling and marketing of the fruit as are given to prunes, peaches, or walnuts.

### THE POMEGRANATE.

This fruit is grown in various parts of the state, and certain quantities are profitably sold. The variety chiefly cultivated is a bright orange color, but a large number vary with a faint blush to dark red. The fruit ripens in the warmer parts of the state in October. Pomegranates for Eastern shipment have proved profitable in the Porterville district. The only hindrance to a rapid extension of pomegranate planting in California is the lack of market demand.

\*From the article by Professor Ira. J. Condit, University of California.

## FRESH DECIDUOUS FRUITS.

The shipments of deciduous fruits in 1918 far exceeded all previous years.

Statement Showing Number of Cars of Each Variety Shipped, 1908 - 1919.

## OLIVES AND OLIVE OIL.

There were very few new orchards planted in olive trees during the years 1905-1909, consequently the production of olive oil changed but slightly. The orchards that are coming into bearing are mostly varieties that are used for pickling purposes, and the production of pickling olives is increasing considerably from year to year. Since 1909 a large area has been planted. The production of olives during the last few years has increased by improved methods of irrigation and fertilization, and the industry is growing in importance, and new planting is on a considerable scale. The production is about equally divided between southern California and the territory north of Tehachapi. The harvests in California generally alternate between heavy and light, although the last few years the crops have been more uniform, due to the increased care and attention to orchards.

Not more than 35 gallons of oil are produced from a ton of olives, although some manufacturers, who have heavy presses, claim to obtain 40 gallons of oil to the ton. It takes about five and one-half pounds of olives to make one gallon of pickles. The output of pickled olives is increasing much more rapidly than the production of olive oil, as California manufacturers can not compete with foreign oil as to price.

The leading varieties now being planted in California are the Mission and Manzanillo, all other olives generally being treated as oil olives, as they are unfit for pickles.

In 1911 it was estimated that there were 18,000 acres of olives, producing about 8,000 tons of oil olives, and 4,000 tons for pickling. In 1907 the average net income was only \$17 an acre; in 1912 the average had increased to \$36.88 an acre. In 1908 the olive industry represented capital invested amounting to \$4,500,000, increased in 1912 to \$7,500,000. Formerly the by-products were more or less wasted; now oil, described as "mechanical oil," is extracted from the pomace and used to a large extent by soap and other factories. The average yield per acre in California is about one and one-fourth tons, and the average price

\*In no case do the above figures cover the entire shipment of apples, as they continue to be shipped long after the deciduous fruit season is closed.

received by the growers for the three years, 1909-1912, for oil olives on the trees was \$22 per ton. Forty per cent of the olives produced are pickling olives, and 60 per cent oil olives. The average price received by growers 1909 to 1912 for pickling olives on trees was \$62 per ton. The net average receipts by growers for pickling olives was \$53.50 per ton, and the net average receipts for both oil and pickling olives \$36.88 per acre. The amount paid to growers in 1911, for approximately 12,000 tons, was \$442,000; of this tonnage 4,000 were pickles, representing 1,200,000 gallons, and 8,000 tons of oil olives representing 280,000 gallons of oil.

It is exceedingly difficult to obtain reliable figures regarding olives and olive oil.

#### CALIFORNIA OLIVES IN 1919.\*

In 1919 the area planted to olives in California comprised approximately 40,000 acres, two-thirds of which are of bearing age. The groves are valued at from \$500 to \$1,500 per acre. Considering the fact that part of these groves are in full bearing and some are not yet in bearing a safe average of their value would be \$750 per acre. There are 30 olive processing plants in the state and these represent an investment in excess of \$1,000,000. The total investment in the industry in California probably exceeds \$30,000,000.

As nearly as can be ascertained the value of the output for the season 1919-1920 was a little less than \$5,000,000.

It is estimated by those who are qualified and have made a careful analysis of the situation that there is a potential olive acreage in California of something over 300,000 acres. In my opinion by planting land which is ideal for olive growing and by taking care of the orchards now planted the present annual output of olives could be increased to a value of \$50,000,000. Unquestionably this would be true if an adequate tariff were placed on olive oil for an assured period of say twenty years. This would encourage the planting of olives of oil varieties on thousands of acres of foothill lands now used only for grazing purposes.

Butte County has a total olive acreage of about 6000 acres of which more than one-half is in bearing. There is at least an additional 30,000 acres where soil and climatic conditions are right for olive culture in Butte County.

Butte County leads the State both in olive acreage (bearing and non-bearing) and in production.

The five largest olive plants in Butte County handled a total of slightly less than 3000 tons for the season 1919-1920 (this includes oil and pickled olives).

Olive growers for the season just past received from \$75 per ton to \$300 per ton for their olives. My judgment is that the average price received by the grower for his product last year straight through orchard run will exceed \$100 per ton by a considerable margin.

It is difficult to get exact quantities from some of the plants but as nearly as this can be ascertained it would appear that about 5000 bar-

\*From an article by B. B. Meek, Gen. Mgr. of the American Olive Co.

rels, containing 190 pounds net per barrel, of Greek Style Olives were processed in this county in 1919; about 45,000 gallons of olive oil was manufactured; and probably about 90,000 cases of California Processed Olives (2 dozen quart packages per case) were packed.

The leading counties in the production of olives are: Los Angeles, Riverside, Santa Barbara, San Bernardino, and San Diego in the south, and Butte and Tehama in the north, Santa Clara, Tulare, Fresno, Sacramento, and Sonoma in central California. There are large and modern plants for making olive oil and pickled olives at Oroville, Los Angeles, San Diego and Fresno. Butte is the largest producing county in olives, Tulare County being second.

Olives (Imported) 1909 - 1919.

(Duty, 15 cents per gallon.)

Year	Imported	
	Gallons	Value
1909	2,969,329	\$1,349,023
1910	4,555,975	1,659,801
1911	3,044,947	1,567,546
1912	5,076,857	2,303,277
1913	3,946,076	1,896,982
1914	5,316,364	2,292,837
1915	3,622,275	1,607,903
1916	5,938,446	2,433,304
1917	5,641,759	2,338,615
1918	2,385,059	1,062,487
1919	3,753,962	2,338,881

NOTE.—Olives in California, although cultivated on a considerable scale, have generally been considered one of the minor crops, and no regular records of the crop have been kept until the last few years. A large acreage has been planted in the last few years.

Olives (Imported) 1914 and 1919.

Country	1914		Country	1919	
	Quantity, gallons	Value		Quantity, gallons	Value
Spain	3,763,716	\$1,684,744	Spain	3,205,017	\$1,791,949
Greece	1,198,656	472,686	Italy	268,208	196,081
Italy	249,139	97,743	Greece	223,363	293,805

The war made great changes in the imports. Spain, of course, has always produced the most olives, but until 1917 Italy always exported most olive oil.

## Olive Oil, 1909 - 1919.

## Imports.

(Duty, in cask, 20 cents per gallon; in bottles, 30 cents per gallon. Olive oil unfit for food, free.)

Year	For manufacturing or mechanical purposes		For table use	
	Gallons	Value	Gallons	Value
1909.....	369,979	\$183,983	4,129,454	\$5,069,655
1910.....	842,926	477,679	3,702,210	4,869,114
1911.....	578,477	378,819	4,405,827	6,014,191

1919.....	114,642	177,757	4,283,136	8,010,626

The total imports of olive oil were as follows:

## Edible Oil.

Country	1914		Country	1919	
	Quantity, gallons	Value		Quantity, gallons	Value
Italy.....	4,319,567	\$5,552,098	Spain.....	4,203,827	\$7,735,703
France.....	949,858	1,512,324	France.....	60,533	214,650
Greece.....	433,691	325,022	Italy.....	628	920
Spain.....	362,483	370,053	Other countries..	18,148	59,353

## MANUFACTURE OF OLIVE AND OTHER OILS.

There were 112 concerns in the United States in 1916 engaged in the manufacture of 262,558,661 pounds of oil from peanuts, mustard seed, kapok seed, rape seed, sunflower seed, soy beans, walnuts, corn, copra, palm kernels, and olives. The movement to grow soy beans, peanuts, and other oil-bearing seeds and nuts other than cottonseed for the manufacture of oil has received a great impetus and there will probably be several hundred establishments engaged in crushing the crops grown in the future.

## Production of Vegetable Oil in California.

The output of vegetable oils has greatly increased in California during the last few years. The Globe Oil Mills, the largest in California, produced the following quantities during the calendar year 1918.

Variety	Pounds
Cottonseed.....	4,777,790
Soy bean.....	542,247
Cocoanut.....	53,616
Sesame.....	151,481

In 1919, the production of cottonseed oil in this state amounted to 90,000,000 pounds.

## PEACHES AND NECTARINES.

In the production of peaches, California leads all other states, large quantities being dried and canned, and in the shipment of fresh peaches is only exceeded by Georgia. Magnificent nectarines are grown, but in comparatively small quantities. In 1919 the production of dried nectarines was probably only about 25 per cent of the output ten years ago. Only about 50 tons were handled by the Peach Growers' Association.

The 5 leading states in the production of peaches in 1919, were as follows:

Rank and state	Bushels
1 California	17,600,000
2. Georgia	5,895,000
3. Arkansas	3,639,000
4. Texas	2,760,000
5. Washington	1,899,000
United States	50,434,000

## California.

Now that the California peach growers have organized with a membership of six thousand, and \$1,000,000 capital, controlling 85 per cent or more of the tonnage in the state, the industry is on a sound basis, and the prices obtained have been satisfactory to the growers. In 1916 the crop amounted to about 29,000 tons.

The average price to the grower for the 1916 crop was about 100 per cent greater than the average price for the 1915 crop. It must be borne in mind, however, that during the year of 1915, peaches reached the lowest price known to the industry. Taking, however, a period of five years, the current price for the 1916 crop is probably not over 10 or 15 per cent above the average for that length of time.

The production of dried peaches in 1917 was between 38,000 and 40,000 tons. The quality was not as good as in either 1915 or 1916, and the crop as a whole ran to smaller grades, but was the largest ever produced in California, and notwithstanding this fact, the entire crop was marketed by February 1, 1918. The quality of the peach itself was not as good as either of the two previous years.

The maximum price received by the grower for the 1914-1915 crops, before the Peach Association was organized, was 3 cents a pound in the sweat box. The average for the 1916 crop was a little better than 6 cents, and for the 1917 crop a fraction over 8 cents a pound. The minimum prices paid growers for these two crops were 5 and 6½ cents.

The total production of dried peaches in California for 1919 is estimated to be about 33,000 tons. The variety average for the past

four years has been approximately 40 per cent yellows and 60 per cent muirs. The grade average for the past four years is as follows:

	Yellows, (per cent)	Muirs (per cent)
Standard -----	.1593	.2944
Choice -----	.4618	.4984
Fancy -----	.2578	.1538
Extra fancy -----	.0971	.0370
Slabs -----	.0187	.0114
Shrinkage -----	.0053	.0050

## Estimated Tonnage by Counties.

County	Tons	County	Tons
Fresno -----	21,200	Contra Costa -----	200
Kings -----	2,600	Tehama -----	800
San Benito -----	150	Solano -----	750
Tulare -----	2,200	Yolo -----	1,000
Shasta -----	100	Sutter -----	350
Merced -----	800	Madera -----	300
Butte -----	900	San Joaquin -----	400
Kern -----	100		
Santa Clara -----	350	Total -----	33,000
Stanislaus -----	800		

The tremendous demand for peeled peaches has made it necessary to erect new operation plants and enlarge those which were previously built. Peeling machines are installed at Fresno, Fowler, Selma, Kingsburg, Reedley, Hanford and Suisun.

The outlook for the dried peach industry is very promising, as the market has been developed and stabilized through the efforts of the California peach growers, so that the demand during the past year far exceeds the supply and the growers are receiving satisfactory returns for their product.

## Exports of Dried Peaches.

	1914			1919	
	Quantity, pounds	Value		Quantity, pounds	Value

**Peaches and Nectarines (Dried) Exported, 1909 - 1919.**  
(None imported.)

Year	California crop, pounds			Exported	
	Peaches	Nectarines	Total	Pounds	Value
1909	40,000,000	750,000	40,750,000	2,403,430	\$151,334
1910	50,000,000	500,000	50,500,000	2,617,069	151,520
1911	22,000,000	800,000	22,800,000	7,125,014	499,530
1912	53,000,000	500,000	53,500,000	4,425,803	422,766
1913	40,000,000	400,000	40,400,000	6,529,633	444,879
1914	69,400,000	600,000	70,000,000	6,712,296	449,549
1915	57,000,000	400,000	57,400,000	14,464,655	834,813
1916	58,000,000	*	-----	13,739,342	893,587
1917	78,000,000	*	-----	8,187,588	605,620
1918	41,000,000	*	-----	5,862,605	627,841
1919	66,000,000	*	-----	4,834,738	662,080

\*The quantity being comparatively small the last few years, they are now included in peaches. Dried peaches are sent all over the world, but Canada generally takes about 3,000,000 pounds, a far larger proportion than any other country.

**The Prune Crop.**

The California Prune and Apricot Growers' Association incorporated four years ago has a capital of \$2,500,000 and a membership of 6,000.

Possibly about 75,000,000 pounds of prunes were handled out of the 1918 crop; that the growers all received a certain price fixed more or less by the Food Administration as a maximum price to be received by them for the season.

Since Association growers in their membership become both growers and packers and sellers of their goods to the trade, they were entitled to the further profits that might accrue to the Prune and Apricot Growers' Association, and as such received on the grades between 30 point to 100,  $\frac{1}{4}$  cent greater than the government price; on grades between 100 and 120,  $1\frac{1}{4}$  cents more than the government price; and on grades from 120 up,  $\frac{1}{2}$  cent greater than the government price. On the one very large grade of 0-30's they received  $\frac{3}{10}$  cent greater than the government price. The government prices were:

For 20-30's	15 ¢ a pound
For 30-40's	10 ¢ basis
For 40-50's	9½ ¢ basis
For 50 to 80 point	8½ ¢ basis
For 80 to 100 point	8 ¢ basis
For 100 to 120 point	4½ ¢ a pound
For 120's and up	4 ¢ a pound

Large portions of damaged goods were sold by the growers to the packers at prices ranging from the very topmost government price down to as low as  $1\frac{1}{2}$  cents per pound.

Prices received by the grower for the 1919 crop were:

For 20/30's	22 ¢ per pound
For 30/40's	18½ ¢ per pound
For 40/50's	15½ ¢ per pound
For 50/60's	13½ ¢ per pound
For 60/70's	12½ ¢ per pound
For 70/80's	11½ ¢ per pound
For 80/90's	9½ ¢ per pound
For 90/100's	8½ ¢ per pound
For 100/120's	6½ ¢ per pound
For 120's and up	6 ¢ per pound

**Dried Prunes, 1909 - 1919.**  
(Duty, 1 cent per pound.)

Year	California crop, pounds	Exports		Year	California crop, pounds	Exports	
		Pounds	Value			Pounds	Value
1915 ---	174,000,000	43,478,892	\$3,274,197	1918 ---	90,000,000	32,926,546	\$3,060,691
1916 ---	130,000,000	57,422,827	3,975,396	1919 ---	260,000,000	59,072,436	7,946,241
1917 ---	224,000,000	59,645,141	4,934,829				

The largest quantity of prunes exported go to Germany and Canada, but none have gone direct to Germany since 1915. In 1918 Canada took 13,025,903 pounds, and the United Kingdom was second, with 4,827,806 pounds. The imports of prunes are included with plums.

**Exports of Dried Prunes, 1914 and 1919.**

Country	1914		Country	1919	
	Quantity, pounds	Value		Quantity, pounds	Value
Germany -----	17,417,865	\$938,260	United Kingdom	18,830,926	\$1,963,661
France -----	13,514,086	901,506	France -----	8,891,717	1,421,577
Canada -----	12,757,585	697,718	Canada -----	7,873,557	766,385
United Kingdom	11,175,968	955,662	Denmark -----	5,782,865	907,168
New Zealand ---	702,255	46,992	Sweden -----	5,212,554	968,660

*Prunes.*—The prune crop was fully 20,000 tons greater than the bumper of 1917 when the estimate was for 109,000 tons. New bearing acreage and older trees in the Sacramento and San Joaquin Valleys, with excellent growing conditions in the Santa Clara are responsible for the big increase in production.

Estimated production by districts is about as follows:

	Tons
Santa Clara (Alameda, Santa Clara, San Benito, etc.)-----	67,000
Sonoma (Sonoma, Lake and Mendocino)-----	20,000
Sacramento (Napa and Sacramento Valley)-----	30,000
San Joaquin (Tulare, Kings, etc.)-----	12,000
Southern California -----	1,000

It will be recalled, in comparing the production this year with that of 1918, that fully 40 per cent of last year's crop was ruined by unprecedented rains after the harvest season opened. No material damage occurred this year, although storms occasioned some extra work and caused some apprehension at the time.

**THE CITRUS FRUIT INDUSTRY.**

The citrus fruit industry has reached its present development in southern California, which is made up largely of San Bernardino, San Gabriel, and San Fernando valleys, and in the coast region in Orange and Los Angeles counties. There are smaller but less favorable regions in Santa Barbara and Ventura counties, close to the mountains, and in San Diego County oranges have also been cultivated from an early

period, and as far as Butte County in the north, and Tulare, Fresno, and Kern counties in central California. Most of the oranges in California are now of the Washington Navel variety, the remainder comprising the Valencia Late as the most important variety, with fewer of the St. Michael, Mediterranean Sweet, Thompsons, Ruby, Blood, Jaffa, Seedlings, and Tangerines.

The orange crop of northern California matures from four to six weeks earlier than it does in the southern part of the state, notwithstanding the fact that it is from 200 to 500 miles farther north. This unusual condition is due to the topography of the Pacific coast. The two large San Joaquin and Sacramento valleys in central and northern California lie between two great mountain ranges extending north and south. The Coast Range mountains shut off the modifying influences of the sea, causing relatively higher night temperatures during the summer months than prevail in the southern part of the state.

In southern California, San Bernardino is the largest producer of oranges; Los Angeles, Riverside, and Orange counties follow in the order given. In northern and central California, Tulare leads, with Butte, Fresno, Kern, and Sacramento counties being next.

The commercial varieties of oranges are the Washington Navel, Valencia Late, Satsuma, and Tangerine. Other varieties are Ruby Blood, Mediterranean Sweet, St. Michael, Joppa, and Dancy's Tangerine. Some idea of the size and value of the crop, and of the immense benefit derived by growers by a well-organized association, is shown by the results obtained by the California Fruit Growers' Exchange, the largest and most successful of all the cooperative institutions formed by the fruit growers.

The following tabular statement shows the total number of boxes shipped each year, the amount received, and the average f.o.b. California price per box during the last ten years:

Shipment of Oranges, 1909 - 1919.

Year	Boxes shipped	F. O. B. returns	Average per box
1908-09	8,710,828	\$13,958,990 00	\$1 60
1909-10	7,578,801	14,831,975 00	1 96
1910-11	10,842,790	20,708,355 21	1 91
1911-12	9,232,357	17,235,822 98	1 87
1912-13	4,940,068	13,640,091 32	2 74
1913-14	11,264,865	18,990,725 54	1 69
1914-15	11,893,076	19,523,397 72	1 64
1915-16	12,097,918	27,675,922 74	2 29
1916-17	15,492,334	33,478,130 63	2 16
1917-18	8,642,875	36,291,675 48	4 20
1918-19	17,516,000	69,475,000 00	3 75

## The Citrus Crop, 1917.

The great damage that was inflicted on California orange growers by the heavy frost which occurred the last week in December, 1911, and the first week in January, 1912, is shown in a striking manner by the returns of the California Fruit Growers' Exchange given above. This large decrease was in some measure made up for by better prices, the average being \$2.74 per box, against \$1.87 for the previous year.

The sales made by the Exchange during the last fifteen years have amounted to approximately \$262,000,000, on which business the losses due to bad debts, or in the transmission of the funds have been less than \$8,000, or about 3/1,000 of one per cent.

A careful estimate recently made places the production of oranges in California at 129 to 191 boxes to the acre, but there is considerable difference in the crop in various orchards.

On account of the heavier loading of cars the last two years due to the shortage of equipment owing to the war, the carload figures do not give a true comparison of the crop with other years. The average load of citrus fruit has been increasing each year because of larger cars and the increasing amount of fruit precooled by the shippers, which is always loaded heavier.

The Valencia crop which is now normally half the size of the Navel crop, is likely to equal the Navel crop in a few years.

#### Lemons.

Although lemons have been grown in California for half a century, it is only during the last 20 years that they have risen to considerable commercial importance. The lemon is less hardy than the orange and comprises from 10 to 15 per cent of the citrus crop.

The principal varieties of lemons grown in California are the Eureka; the Lisbon, imported from Portugal; Villa Franca, imported from Europe, and the Bonnie Brae, grown mostly in San Diego County.

The California lemon industry has been developed by small land-owners. There are a few groves which contain from 150 to 1,000 acres, but the average grove contains less than 10 acres.

Practically all imported lemons come from Sicily, where the production is very large. The imports into the United States in 1913 amounted to 151,416,412 pounds. Since that year only the value is given, which in 1914 was \$5,981,635.00, and in 1918 \$2,179,211.00.

#### The Lemon Crop.

The lemon tree, unlike the orange, blooms continuously, so that an unfavorable climatic condition does not destroy the crop for the entire year.

The California lemon production has increased 282 per cent in the fifteen years ending August 31, 1917, and 45 per cent in the last five years. The increase has been constant, except where interfered with in 1913 by a severe freeze and this past year by heat, both of which conditions were unprecedented.

The nonbearing acreage of lemons is 75 per cent as large as the bearing acreage.

Except for California's production, Italy practically supplies the world with lemons. The present yearly consumption of lemons in the United States and Canada, which is 13 lemons per capita, about equals the exports from Italy to all other countries.

**Pomelo or Grapefruit.**

The pomelo or grapefruit was formerly almost exclusively grown in Florida, but its cultivation has increased in recent years, and considerable quantities are produced in Riverside, Tulare, San Diego, and other citrus counties. The leading varieties are the Nectar, Imperial, Marsh, Seedless, and Triumph.

**Citron of Commerce.**

The citron of commerce was grown by the Missions in the early days, but now is cultivated only to a small extent in Riverside County. At one time there was a grove of 21 acres in Los Angeles County, but it was neglected and five years ago was replaced by orange, avocado, and other trees. At the present time there is only one orchard producing this fruit on a small scale, but it is reported as a success.

**CITRUS BY-PRODUCTS IN CALIFORNIA.**

During the last year or two considerable progress has been made with a view to utilize the cull oranges and others not suitable for sale. There are several factories where orange marmalade is manufactured. One plant is at Anaheim, and another is being established at San Dimas. At Redlands there is a factory that manufactures all varieties of citrus fruit products, essential oils, emulsions and orange juice, orange peels in alcohol, and in brine, citrate of lime, tincture, and fluid extract of orange, lemon and grapefruit, syrup and dried orange and lemon peel.

The Exchange By-products Company, organized by the Exchange lemon shippers, has handled during the season of 1916-1917 over 5,100 tons of lemons not suitable for shipping. The season's production of high grade citric acid will exceed 175,000 pounds, which has found a ready sale. The company also manufactured and sold over 1,000 gallons of lemon and orange tincture and has carried on experimental work on several other products.

In 1918, the By-products Company has been handicapped by shortage of raw material due to the short crop and high value in the fresh state of any lemons which would carry to the markets. The manufacture of high-grade citric acid has been continued to the extent of the supply of lemons, and improvements in the processes have been developed by which a greater recovery of acid from the juice is accomplished. Experimental work on other products has been continued.

During the year a number of Fruit Exchange associations purchased a controlling interest in a company successfully manufacturing and marketing orange and grapefruit marmalade. Arrangements are now being made for the Exchange shippers generally to join in the movement, mutualizing the marmalade company and making it the nucleus to develop a by-product business to utilize the orange and grapefruit culls.

## California Orange and Lemon Crop, (by Districts,) 1909 - 1919.

(Carloads.)

Season (year ending Oct. 31)	Southern California		Total carloads	Northern and Central California*		Grand total, carloads

## THE FLORIDA CITRUS CROP.

Florida is at present the only competitor with California in the United States in the production of oranges, although in recent years citrus fruits are being produced on a small scale in Arizona, Louisiana, and Texas.

Florida first took the lead in the production of citrus fruits in this country, but the "great freeze" of December, 1894, and February, 1895, when the temperature at some places fell to 14 and 18 degrees, was a disaster from which they are only now fully recovering. From 6,000,000 boxes shipped before the frost, the number fell the following year to 75,000.

## Florida Citrus Fruit Crop, 1909 - 1919.

Season	Oranges, boxes	Average price per box	Total value
1908-09 -----	4,634,000	\$1 56	\$7,229,040
1909-10 -----	6,100,000	1 34	8,174,000
1910-11 -----	4,600,000	1 65	7,590,000
1911-12 -----	4,750,000	2 22	10,497,000
1912-13 -----	8,125,000	1 96	15,925,000
1913-14 -----	7,946,926	1 83	14,541,130
1914-15 -----	9,700,000	1 42	13,774,000
1915-16 -----	8,370,000	1 96	16,405,200
1916-17 -----	7,649,049	2 01	15,678,000
1917-18 -----	5,581,309	3 46	19,030,000
1918-19 -----	8,407,680	4 25	35,732,640

The figures include lemons, the quantity being so small that separate records are not kept. Limes, grapefruit, and tangerines are also included.

Lemons are no longer grown commercially, but the number of limes is rapidly increasing.

In 1916 the Florida growers adopted five varieties of oranges as standard, viz: Parson Brown, Homosassa, Pineapples, Valencias and Lue.

#### THE CALIFORNIA RAISIN INDUSTRY.

One of the largest and most important branches of fruit growing is the cultivation of the raisin grape, the acreage in which is now by far the largest in the world.

Raisins were first produced on a considerable scale in the southern part of the state, but Orange and Riverside counties no longer produce raisins; Los Angeles County very few; Yolo County, which at one time produced Sultanas and Thompson's Seedless in considerable quantities, now finds it more profitable to ship a large portion of the crop as table grapes, while the vineyards in Riverside and San Bernardino counties are nearly all in wine grapes.

#### Counties Where Raisins Are Produced.

Of the fifty-eight counties in California, less than a dozen produce raisins in commercial quantities.

When raisins were first shipped East in any quantity it is impossible to say. In 1875 New York reported that up to November 1, 6,000 22-pound boxes of California raisins had been received. About 1888 Fresno appears to have shipped a considerable quantity for the first time.

The California Associated Raisin Company of Fresno now controls almost the entire acreage in raisin grapes, or upwards of 90 per cent of the total acreage in the state, the contracts signed in 1919, amounting to 202,468 acres, as follows:

Varieties	Acres
Muscats .....	94,131
Thompson's .....	75,369
Sultanas .....	12,045
Malagas .....	17,673
Feherzagoes .....	3,214
Black grapes .....	96
Total .....	202,468

In addition to the above, there are 30,065 acres in raisins, as follows:

	Acres
Muscats .....	12,385
Thompson's .....	12,775
Sultanas .....	1,294
Malagas .....	2,918
Feherzagoes .....	682
Black grapes .....	11
Total .....	30,065

The varieties of raisin grapes are few in number. The Muscat of Alexandria and the Muscatel Gordo Blanco hold the first place, while Malaga and Feherzagoes are used to a small extent; the seedless varieties are Thompson's Seedless and Sultanas, and the Zante currant.

The Malagas do not represent a great deal in raisin tonnage, as a large proportion of them are shipped green as table grapes.

#### THE RAISIN CROP OF 1919\*

*California Raisin Crop for 1919, per Counties and per Varieties of Grapes.*

County producing	1919 raisin production—tons—variety				
	Muscat	Thompson Seedless	Sultanas	Malagas, Black, Feherzagoes	Totals
Fresno	75,245	52,965	7,445	5,685	141,340
Tulare	8,300	11,475	3,690	1,420	24,885
Kings	10,150	620	685	95	11,550
Sutter	70	3,530	10		3,610
Madera	920	265	30	235	1,450
Yolo		1,410			1,410
Kern	690	350			1,040
San Bernardino	290		595		885
Merced	10	620	15	140	785
San Diego	325				325
Stanislaus		265	30		295
Totals	96,000	71,500	12,500	7,575	187,575

The increase in acreage of raisin grapes for 1919 is estimated to be 5 per cent over that of 1918, mainly due to planting of Thompson's Seedless.

In 1918 the production of raisins amounted to 167,000 tons. In 1919 the total production of raisins amounted to 187,575 tons.

The net valuation of the raisin crop in 1918 was \$17,500,000. Last year (1919) the gross return was \$50,000,000 and the net return was about \$42,500,000, an increase over the previous year of \$25,000,000.

According to the foregoing figures, the returns to the grape industry of California for the year 1919 would have reached a grand total of:

Wine grapes	\$15,041,200 00
Table grapes	18,092,950 00
Raisin grapes	42,500,000 00
Total	\$75,634,150 00

In 1918 the prices realized by the growers on the bases set by the United States Government of  $5\frac{1}{2}$  cents per pound for Muscats,  $6\frac{3}{4}$  cents per pound for Thompson's Seedless,  $6\frac{1}{2}$  cents per pound for Sultanas, and the estimated price of  $4\frac{1}{2}$  cents for sundry raisins netted the growers a sum of \$19,743,750.

\*As estimated by California Associated Raisin Company.

## Comparative Prices per Ton, 1913-1918.

Varieties	Price paid by California Associated Raisin Company					
	1913, crop, per ton	1914, crop, per ton	1915, crop, per ton	1916, crop, per ton	1917, crop, per ton	1918, crop, per ton

## California Seeded Raisin Industry, 1899-1919.

Fresno County is the center of the seeded raisin industry, where it originated.

Year	Tons	Year	Tons
1899 -----	12,000	1910 -----	31,500
1900 -----	14,000	1911 -----	33,000
1901 -----	14,000	1912 -----	43,000
1902 -----	16,000	1913 -----	49,000
1903 -----	18,000	1914 -----	35,000
1904 -----	18,000	1915 -----	50,000
1905 -----	21,000	1916* -----	96,400
1906 -----	24,000	1917* -----	82,900
1907 -----	26,000	1918* -----	40,000
1908 -----	24,000	1919 <sup>ab</sup> -----	38,200
1909 -----	28,000		

\*The above is the quantity packed by the California Associated Raisin Company and does not include the tonnage of outside packers.

Loose raisins are packed in 50-pound boxes; Thompson's Seedless in 12-ounce cartons, 45 to the case; seeded raisins in one-pound cartons, 36 to the case; also in 12-ounce, 45 to the case and a few in bulk in 25-pound boxes. Raisin clusters are packed in 5, 10 and 20-pound boxes.

*Wooden trays for drying raisins.* The Australian vineyardists have discarded the wooden tray for drying, and use wire netting under cover. It is said that they find that dry air and not sunlight accomplishes the best drying, and preserves the natural color better, and it was found that wire netting made good trays, and cost half that of wooden trays. The driers are roofed affairs, often extending clear across a vineyard or orchard. They are simply constructed. Posts of native timber are set about nine feet apart, and light 1 by 1½ inch pieces are nailed across them. A roof of sheet steel is placed above, and 10 to 12 framed net wire trays are laid in tiers about nine inches apart, one above the other on the crosspieces. The rain is kept out, and the air has free circulation.

## The California Raisin Crop, 1909 - 1919.

	Tons		Tons
1909 -----	70,000	1915 -----	128,000

1913 -----	65,000	1919 -----	182,596
1914 -----	91,000		

## THE GREEK CURRANT.

The Greek or Zante currant has been produced on a very large scale for centuries. They are the seedless variety of a peculiar dwarf grape-vine producing a small black grape, or currant, of a peculiar flavor. It is the most important crop in Greece, as it forms nearly one-half of the total exports. The vineyards cover 150,000 acres, and produce the enormous total of from 300,000,000 pounds to 340,000,000 pounds in a favorable season. About 33,000,000 pounds are imported annually.

**Greek Currants in California.†**

That the grapes from which the Greek or Zante currants are made can be grown in California has long been known. Until lately the possibility of their profitable cultivation has been doubted.

Two varieties are used—the Black Corinth and the White Corinth. The latter is not widely grown in Greece and produces currants of somewhat larger size, but of poorer quality, than the former. It has been grown commercially for many years in California and some of the growers have found it profitable.

The chief source of Greek currants is the Black Corinth, which also has been grown in California for many years. No large commercial success has been obtained with this variety, however. The reason is that the conditions and methods of growing tested have failed to produce paying crops. This seems to be due to excessive vigor of the vine, which causes it to drop its blossoms without setting.

The Black Corinth grows in poor, stony soil in Greece and yields fair crops. Perhaps it might do well in soils too thin for other grapes in California.

The Panariti is a dark variety of Corinth currant grape introduced several years ago.

The Panariti grape, it is believed, promises to furnish the basis of an industry which has heretofore not been developed in this country.

The experience of the specialists of the United State Department of Agriculture with this variety has demonstrated that a large annual production of fruit is dependent upon specific horticultural treatment at a particular period in the development of the vine. This treatment is none other than that of ringing the trunk or bearing canes of the vines, which consists in removing a narrow band of bark at the time the vines are in bloom. Unless this is done, the individual fruits in the cluster are not likely to be uniform in size and period of ripening. On vines which have been treated by ringing, the fruits are large, uniform in character and ripen evenly. Because of the climatic conditions in certain districts of the vineyard area of California in which the raisin industry has not developed, this early ripening grape, which must be treated in the same way as other raisin grapes, is expected to prove more successful than have any of the late ripening raisin sorts, thus making it possible to produce currants of satisfactory quality in the bay counties where raisin production has not heretofore developed.

The name "Panariti," which has been applied to this variety, is taken from the name of one of the most famous grapegrowing districts in Greece where this sort was obtained. The Panariti is a distinct variety of the type of grapes used for the making of currants and should not be confused with other sorts of the currant type of grape previously introduced into the United States.

---

†By Professor Frederic T. Broletti, University of California.

## CALIFORNIA RAISIN CROP, AND EXPORTS AND IMPORTS, 1909 - 1919

(Duty on raisins and dried grapes, 2 cents per pound.)

Year	California crop, pounds	Exports		Imports	
		Pounds	Value	Pounds	Value
1909	140,000,000	7,880,161	\$455,657	5,794,320	\$327,644
1910	115,000,000	8,526,114	417,403	5,042,683	296,047
1911	120,000,000	18,659,992	1,069,300	2,479,220	237,422
1912	185,000,000	19,949,046	1,351,986	3,255,861	295,466
1913	132,000,000	28,120,507	1,512,642	2,579,705	241,630
1914	182,000,000	14,766,416	997,575	4,554,549	309,511
1915	256,000,000	24,845,414	1,718,547	2,803,806	238,958
1916	264,000,000	75,014,753	5,407,219	1,024,296	143,750
1917	326,000,000	51,592,514	4,409,639	1,850,219	234,560
1918	334,000,000	54,987,793	4,981,270	843,533	153,319
1919	365,186,000	84,150,060	8,066,001	119,969	34,827

Note.—Imported raisins come almost entirely from Spain, and Sultanas, which are included in the above figures from Smyrna in Turkey in Asia. These latter have also greatly decreased in recent years from upward of 7,000,000 pounds in 1906 to 1,036,574 pounds in 1915, and none have been imported since.

## DRIED GRAPES.

The quality of "dried grapes" (which are wine grapes) used for raisins is now small, and is discouraged, as they make inferior raisins.

## IMPORTS OF GREEK CURRANTS, 1909 - 1919.

(Duty, 1½ cents per pound.)

Year	Pounds	Value
1909	32,482,111	\$1,185,106

## Small Fruits.

Of the small fruits strawberries lead, both in acreage and production, California being the largest producer in the West, the greatest production being in Santa Clara County. Raspberries and loganberries, and blackberries and dewberries rank second and third, respectively.

The cultivation of named varieties of blackberries was begun about 1850, and since that time at least 140 different named varieties have been introduced.

Currants are only grown in about eight states, California being one of them, Alameda County being the largest producer; gooseberries are not much grown anywhere in the United States, Indiana being the largest producer.

Cranberries only acquired commercial importance fifty or sixty years ago. They are principally grown in Massachusetts, New Jersey, and Wisconsin, and are not a success in California.

## NEW CALIFORNIA FRUITS OF PROMISE.\*

## The Avocado.

This fruit has well been named the poor man's food. In the countries of South America, Mexico, and other tropical countries, where it grows wild, the very fact that the trees are such abundant bearers and that the fruits possess all the food ingredients to sustain the human body, are the combinations which have caused this fruit to be so designated. The fruit sells with us at very high prices, and it is more than likely it will continue to do so for many years to come.

Avocado growing in California is still in its infancy, but rapid advance is being made and the industry is expected soon to assume rather prominent proportions. According to estimates of the California Avocado Association there were approximately 26,000 budded trees planted in the state. Of this number probably 16,000 would be considered good, marketable varieties. Individual trees in the vicinity of Los Angeles bear from 400 to as high as 2,000 fruits each, which during the season have sold at prices of from 25 cents to \$1.25 apiece. Gross incomes of \$200 to \$1,000 per tree have occasionally been secured. Such returns, however, must be considered as exceptional and of little value or interest to the prospective planter.

An interesting feature of the avocado is that it blooms and bears fruit at all seasons of the year and there is no doubt that its cultivation has a very great future in California where there are many localities possessing ideal climatic conditions for its culture.

\*See Roeding's Fruit Growers' Guide, 1919, Fresno, California, also for further details regarding cultivation.

The root stock most favored by avocado growers is the so-called Mexican seedling stock, and as seeds can not be imported from Mexico under the United States quarantine laws, the supply of stock available for budding is limited. Native grown seed, however, is rapidly increasing and the development of the industry will not be seriously affected.

The production in 1918 was small, as the extreme hot weather in June killed all the flowers. The best fruit came from Los Angeles and Orange counties, about five thousand dozen coming from the former place and one thousand dozen from the latter. A number are raised around San Fernando and Santa Ana.

In 1919 the supply of nursery trees was not sufficient to meet the demand and probably about 10,000 trees were planted that season. It is estimated that between 700 and 800 acres are now planted in avocados but most of the orchards are yet too young for bearing. Many of the older plantings are in the process of resetting with the better commercial varieties. The California Avocado Association recommends five varieties, covering the entire year of bearing.

List of Recommended Avocado Varieties With Brief Descriptions.

Varieties	Season dates, inclusive	Wt. of fruit in ounces	Wt. of seed in ounces	Shape of fruit	Color of mature fruits
Fuerte.....	Jan. to April	10 to 16	1½ to 3	Pyriform	Dull green
Spinks.....	March to Oct.	16 to 20	2 to 3½	Obovate to pyriform	Purplish black
Dickinson	May to Sept.	14 to 20	1½ to 2½	Obovate to pyriform	Dark purple
Sharpless	Sept. to Jan.	16 to 20	2 to 3	Pyriform	Dark purple
Puebla.....	Nov. to Jan.	6 to 14	1½ to 2½	Pyriform	Dark purple

#### The Banana.\*

The only satisfaction that can be derived from growing the banana in California is based on the fact that this distinctly tropical plant can be grown and does produce very palatable fruits in very much favored sections in some of the southern counties of the state. It is a definite demonstration of how closely this climate approaches that of the tropics without having the enervating effect of that climate. The banana is grown from suckers. An abundance of water and fertilizer, consisting of rubbish, which should be spaded in around the plant, will promote a rapid and luxuriant growth.

#### The Cherimoyer.\*

Its culture has thus far been confined to the counties south of the Tehachapi, and in these only in sections where there was comparatively little danger from cold weather. Botanically, it is known as *Anona Cherimolia*. Its common name, Custard Apple, is derived from its having the consistency of custard with the blended flavors of the pineapple and the banana. Most of the trees which are sold are seedlings. If greater interest is manifested in this fruit, named varieties will undoubtedly be introduced. It is quite variable in the size of the fruits produced, running from an inch in diameter up to eight inches on the

\*See Roeding's Fruit Growers' Guide, 1919, Fresno, California, also for further details regarding cultivation.

same tree. Where the trees do well they are very prolific and attain quite a large size. There are several small plantations of these trees in Orange and Los Angeles counties.

#### The Guava.\*

Guavas will only be grown to any extent in the counties south of the Tehachapi. If planted elsewhere they will have to be protected, except perhaps in favored locations in the foothills; otherwise they will freeze to the ground during the winter months. There are two varieties, the strawberry and the lemon guava. The former has been more widely planted. The shrub is very attractive, both when in flower and when loaded with its crop of aromatic fruits. Its leaves are glossy green; the flower is snow-white, with a decided jasmine scent. The fruits of the strawberry type are colored like a strawberry, hence the name; while the lemon guava has fruits of a lemon-yellow color. The strawberry guava is by far the better one to plant because it is very much hardier and bears much more abundantly than the other. As in some other fruits of this type the objectionable feature to it is its innumerable seeds. The guava makes a very superior jelly, and in localities where it thrives it grows with so little care it deserves receiving more attention than has been accorded to it.

Two species of guava have been quite widely tried in this state—the strawberry guava, and the lemon guava. They are only grown in California and Florida. According to the Census reports of 1910 there were upwards of 7,000 bearing trees in California, producing about 95,000 pounds of fruit.

#### The Jujube.\*

The jujube has been growing in California for a number of years, having been introduced by G. P. Rixford in 1876, at that time a member of the staff of the San Francisco Bulletin, but now physiologist of the Bureau of Plant Industry, U. S. Department of Agriculture. The oldest trees are said to be growing in Sonoma Valley. Isolated specimens are to be found growing in both the Sacramento and the San Joaquin valleys. The climatic conditions of the interior valleys seem to be particularly favorable to its rapid growth. It is very extensively grown in northern China, where hundreds of varieties, it has been said, have been developed. It grows in the driest of locations and is very resistant to alkali. Many new and valuable varieties have been introduced by the Office of Foreign Seed and Plant Introduction of the United States Department of Agriculture, and if eventually this becomes an industry of any importance in California, we will owe a debt of gratitude to this great department of our National Government which has accomplished more in behalf of the agricultural and horticultural interests of the United States than any other institution of like character, in the world. Many of these new varieties of jujube are now being experimented with at the Plant Introduction Garden near Chico, California. Some sorts are eaten fresh, while others are dried. The largest varieties are processed by boiling in sugar and honey. They make most desirable sweetmeats when so processed and are even more delicious than the

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

Persian dates of commerce. The trees bear enormously, and they are very ornamental. The fruits are very palatable whether processed or not, therefore we have in the jujube combinations which will cause it to become, once its value is better understood, a valuable acquisition to our list of fruits. The only varieties on the market now are those produced from seed.

The credit for successfully processing the first jujubes in the United States is due to Mrs. R. L. Beagles, wife of the farm superintendent of the Plant Introduction Field Station of the U. S. Department of Agriculture, Chico, California. The plant is easily grown from seed or grafts.

The importation of the large fruited, grafted Chinese varieties was only begun in 1906. Under irrigation in northern California the trees have grown luxuriantly and fruited abundantly. The ripe fruit contains a high per cent of cane sugar—as much as 20 per cent.

In general, the jujube may be said to be a heavy bearer, and in California some varieties have proved unusually fruitful. They bear very early, some one-year-old grafts producing as many as 24 fruits. Trees have fruited heavily at Chico, Fresno, Indio, and Bard, in Imperial Valley. There are also 700 one to two year old trees near Hamilton City, Butte County. There is another orchard of about 250 grafted trees and some seedlings near Princeton.

#### The Loquat.\*

This fruit is widely grown in California as an ornamental plant, and a small amount of fruit is marketed. The Census of 1910 reported 3,700 trees in bearing, producing 4,500 boxes. As an ornamental tree much may be said in its favor. Its wide adaptability, there being very few places in California where it can not be grown successfully, and in addition to this its delicious fruits, coming in before any of the other table fruits in the spring, should cause it to be more widely planted than it has been.

Many budded varieties have been introduced from Japan and Southern Europe, but none of them equal in size or compare in quality to the sorts introduced by C. P. Taft, of Orange, California.

### PRESERVED FRUIT DRIED, AND CANNED.

#### Dried Fruit.

California also ranks first amongst the states in the production of dried fruits, the most important of which are raisins, prunes, peaches, apples and pears. In raisins and dried apricots, California has a complete monopoly, neither of these being produced in any other state.

The most important of the dried fruit products, both in point of quantity and of value are raisins, prunes and peaches.

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

## Dried Fruit Packed, 1915 - 1919.

\*From figures furnished by California Fruit News, published by Howard C. Rowley.

The varieties of fruit cured by drying are as follows:

<i>Apricots</i> —	<i>Peaches</i> —	<i>Nectarines</i> —	<i>Plums</i> —
Royal	Lovell	Stanwich	Washington
Blenheim	Muir	<i>Pears</i> —	Jefferson
<i>Figs</i> —	Crawford	Bartlett	Egg
Adriatic	Foster		<i>Prunes</i> —
			Petites

Dried fruit is packed in boxes of 25 and 50 pounds, and 12½ kilos for abroad.

## IMPORTS OF MISCELLANEOUS FRUITS, 1909 - 1919.

## Duty on Imported Preserved Fruits.

Preserved in sugar of their own juices, 1 cent a pound; if contained over 10 per cent of alcohol, 20 per cent ad valorem and in addition \$2.50 per proof gallon of alcohol in excess of 10 per cent. Jellies, 20 per cent ad valorem; pineapples preserved in their own juice, 20 per cent ad valorem.

## FRUIT CANNING AND PRESERVING.

California made a pack of hermetically sealed fruits in tin cans in 1861. For many years after that canned goods were a luxury, relatively expensive, and used only in emergencies, on board ship or at remote places where other food was not obtainable.

The real importance and development of the canning industry did not commence until about the year 1875. The value of its products, which in 1889 was \$6,621,931, more than doubled during each of the two following decades, amounting in 1909 to \$32,914,829.

The case, which is used as the unit of measure for canned fruits and vegetables in the table below, consists of 24 standard-size cans No. 2 (also called 2-pound cans) for berries, cherries and plums, and No. 3 (also called 3-pound cans) for all fruits and vegetables.

California ranks first among the states in the production of canned apricots, peaches and pears.

The most important of the dried fruit products, both in point of quantity, and of value, are raisins and prunes.

## Canned Fruit Packed, by Varieties, 1915 - 1919.

(All grades and sizes.)

\*Figures compiled by the Cannery League of California

## Principal Varieties for Canning.

*Cling Peaches*—Phillips, and Tuscan.

*Freestone Peaches*—Lovell.

*Apricots*—Blenheim and Tilton, also Moorpark.

*Cherries, Sweet*—Royal Anne, Governor Wood, Rockport, and Assorted Black.

*Cherries, Sour*—Montmorency.

*Pears*—Bartlett.

*Plums*—Yellow Egg, Washington, Jefferson, Baileys, Green Gage.

*Prunes*—French Prunes.

## Principal Varieties of Dried Fruits.

*Apricots*—In drying and shipping, Blenheim and Tilton.

*Peaches*—Clingstone, Phillips, Tuscan, also Pleora, and Peaks.

*Peaches*—Freestone, Lovell, Muir, also Elberta, and Salway.

*Nectarines*—The Nectarine is a much neglected fruit. America does not appreciate its value, while it is much prized in England and Belgium where it brings fancy prices.

Stanwick is the largest of the nectarines and thrives splendidly in Fresno County. This and the Gower, an old English variety, are the best for drying and shipping.

*Prunes*—French, also Imperial, Robe de Sergeant, and Sugar.

*Pears*—Bartlett, also ~~Bartlett~~ Hardy, and Glout Morceau.

**VARIETIES AND AVERAGE QUANTITY OF FRUIT USED IN CANNING.\***

While there is a limited quantity of jams, jellies, and preserves manufactured commercially within the state, by far the larger quantity of fruit is used for canned fruit—that is, fruit that is filled into the can fresh, before cooking; sugar syrup is then put in merely for flavoring, the can is hermetically sealed and finally processed or sterilized by heat. Sugar is not essential to the keeping qualities. The preserves, jams and jellies stewed in kettles with a high percentage of sugar are not so dependent upon hermetic closure, as the sugar acts as a preservative agent. For these so-called preserves California produces suitable berries, sour cherries, peaches, plums, quinces, currants, gooseberries, apples and figs and grapes. But of greater commercial importance are the fruits that are generally used for tinned or canned fruits—apricots, peaches, pears, cherries and plums.

*Apples.* About 2,500 tons are canned annually in California, chiefly Newtown Pippins. The average price paid is from \$10 to \$12 per ton. The apples for canning purposes come largely from Sonoma, Santa Clara and Santa Cruz counties.

*Apricots.* In a normal season 20,000 tons of apricots are canned in California. The average price paid to growers for the past five years has been \$30 per ton. The Royal Blenheim and Hemskirke varieties grown in Santa Clara Valley gives the best results to the canner. Moor-parks have a flavor preferred by many, and they grow to a large size.

*Cherries.* Royal Anne and White cherries in general are preferred. An average price would be from 5 to 6 cents per pound. About 1,200 tons of Royal Annes and Whites are used annually for canning, and probably 450 tons of Blacks.

\*See address before the State Fruit Growers' Convention, Davis, June, 1914, by C. H. Bentley, Sales Manager, California Fruit Cannery Association, San Francisco.

*Grapes.* The Muscat or raisin grape is canned to a limited extent; about 1,000 tons are used annually at a price of about \$12 to \$15 per ton.

*Nectarines.* Nectarines are canned, but a very limited quantity is used, and the fresh and dried fruit markets are more desirable for this variety.

*Peaches.* The freestone varieties, such as the Muir and Lovell, are preferred. About 24,000 tons are canned annually with prices about \$22.50 per ton for Lovell, and \$17.50 for other varieties like the Muir and Early Crawford. In spite of the increased trouble and expense of removing the pit, Yellow Clings are the most desirable of all California canned fruits, and more of these are canned than any other variety. An average price delivered at the cannery would be about \$25 per ton for Phillips and Tuscan, and \$20 for other varieties. In the case of clings, a considerable demand has developed for slices. About 35,000 tons are used for canning.

*Pears.* About 20,000 tons of Bartlett pears are canned annually. The price paid to growers ranges from \$30 to \$40 per ton.

*Plums.* Egg plums, Green Gage, Golden Drop plums and similar varieties are used to a limited extent for canning. About 2,500 tons are used for canning, and the price is usually from \$15 to \$20 per ton.

*Berries.* Blackberries have been produced in large quantities, chiefly in Sonoma County, and are used extensively by canners. The Mammoth and Lawton varieties are most common. About 2,000 tons are used by canners and makers of preserves. The price has ranged about \$40 per ton. Far better results are obtained from loganberries. In its fresh form the price ranges from \$55 to \$75 per ton. Canners use about 750 tons.

*Strawberries.* The varieties commonly grown are comparatively soft and juicy, suitable for jams and jellies, but not for preserves. Such are the Dollar and Jessie varieties of the Florin district near Sacramento, and the Banner and Malinda berries of the Watsonville district in Santa Cruz County. The Longworth of the Alviso and Santa Clara districts has become too small to give satisfaction to the canner. These varieties ordinarily bring \$60 to \$70 per ton, while the Clarke, Wilson and other similar varieties grown in Oregon bring \$100 per ton. About 800 tons are used by canners and preservers, but a much larger quantity could be used of better varieties.

With raspberries, also, the canners find better results from Oregon fruit, because it is firmer and higher in color. The Cuthbert and Antwerp varieties are preferred for canning. Canners use about 100 tons.

*Gooseberries* are used in a limited way for jams and jellies.

*Calimyrna and White Endish Figs* are used to some extent. Texas seems to be able to grow a small white fig of good quality and this is canned to a considerable extent. There would seem to be an opportunity for development in California.

*Damson Plums* are needed for preserves, jams and jellies; they bring \$35 to \$40 per ton when ordinary varieties like the Gage and Egg Plums are selling for \$15. There are very few grown at the present time.

*Concord Grapes* are needed for jams and jellies; the want is partly filled by the *Isabella* variety.

*Quinces*, which were for years a drug on the fall fruit market, now bring \$25 to \$30 per ton.

*Crab Apples* are in short supply, commanding a price of 4½ to 5 cents a pound.

*Sour Cherries* are also used in a limited way.

### NUTS.

About three-fourths of the nuts produced in the United States are grown in California, walnuts and almonds being the principal crops.

Walnuts in the United States are produced almost exclusively in California, Orange and Los Angeles counties taking the lead.

California produces practically the whole of the almond crop in the United States.

Peanuts thrive well in southern California, chiefly on the lower lands of the coast region, while in central and northern California peanuts are mostly grown in the river bottoms of the Sacramento and San Joaquin valleys.

### Almonds.

The almond crop in 1918 was very light per acre, the increase over the previous year being due to new acreage. The prices received by growers were the highest ever paid, and nearly double those of 1915.

California is the only state in the Union producing almonds commercially, and about 75 per cent of the crop is controlled by the California Almond Growers' Exchange. In 1918 23,840,145 pounds were imported, valued at \$5,454,408.

Almond Crop, 1910 - 1919.

	Pounds		Pounds

Almost all almonds are imported from Spain and Italy. In 1918, 8,706,782 pounds of shelled almonds came from Spain and 3,790,875 pounds unshelled, or a total of 12,497,657 pounds, and from Italy 9,740,497 pounds shelled, and 364,195 unshelled, or a total of 10,104,692 pounds, or a total for the two countries of 22,602,349. Of almonds the largest proportion is imported shelled, but the reverse is the case with walnuts, the quantity unshelled being nearly double of the shelled.

## Walnut Crop, 1912 - 1919.

The acreage in walnuts in 1918 was estimated at 47,775 bearing and 18,808 nonbearing. The value of the walnut crop in 1918 amounted to \$11,475,250, unshelled walnuts amounting to \$10,870,250, and the shelled to \$605,000.

The acreage in walnuts for 1919 in California was estimated at 50,220 acres bearing, and 19,877 acres non-bearing.

New walnut producing areas are being developed, and very heavy plantings are being undertaken in several sections, in the San Joaquin Valley and other valleys in the state.

The English walnut is the greatest nut grown in the state, judged by the size and value of the crop. It is almost entirely grown in the four southern counties of Santa Barbara, Los Angeles, Orange and Ventura.

The bulk of imported nuts are of the Marbot and Cornes varieties, which correspond in size and quality to the second grade of the Pacific coast production. There are about four million pounds of Naples walnuts imported from Italy annually, and these are the greatest competitors of the California product, as they are of high quality and bring a high price on the market. The total quantity of walnuts imported in 1918 was 23,289,170 pounds, valued at \$5,690,511, being almost the same quantity and value as almonds.

## \*Walnut Crop, 1909 - 1919.

Year	Production	Year	Production
1909 -----	18,700,000 pounds	1915 -----	23,650,000 pounds

Almost all walnuts are imported from France and Italy. In 1918 there was a heavy fall in the quantity imported owing to the war, but in 1917, 10,892,978 pounds of shelled walnuts and 7,409,929 pounds unshelled came from France, or a total of 18,302,907 pounds; and from Italy 223,889 pounds of shelled and 7,598,723 pounds of unshelled, or a total of 7,822,612 pounds; or a total for the two countries of 26,125,519.

**Chestnuts.\***

"The Spanish or sweet chestnut is a stately and magnificent tree, native of the countries bordering on the Mediterranean, but also ripening as far north as Scotland. This nut can be grown very successfully in the coast counties, where the conditions are exceptionally favorable for them. Of chestnuts grown in California the Italian predominates, and it may be said that a large area of the state is well suited for the growth of this nut, as there are bearing trees in nearly all parts of the state. The chestnut, aside from its desirability as an orchard tree, can be commended as a tree for hillsides or a shade tree, and should be more widely planted in California.

There are so many points in favor of the chestnut that it is very difficult indeed to understand why the culture of this nut has not long before this become one of our leading industries. Aside from the fact that the trees are very ornamental, the certainty of a crop one year with another should have caused them to be planted on an extensive scale. By heading the trees low it is practical to grow them in the interior valleys. However, from a standpoint of profit they should only be planted in the deep, alluvial, silty soils found in our river bottoms.

Chestnut culture has always been a problem in the Eastern States when it came to growing European and Japanese types, and now that the blight has made such a serious invasion into the great chestnut forests of the East, there can be no possible excuse for the Pacific Coast States not engaging in this industry which is so promising."

The chestnut is an important crop in Italy, where the yield was 696,244 tons in 1916, and it is considered an important crop, as it forms one of the chief foodstuffs of the poor. Chestnuts also bulk largely in the food resources of the poor in Spain, Switzerland and Germany. Chestnuts are eaten raw or roasted, or else ground into flour. The quantity imported into this country can not be stated, as in the customs returns they are not given separately, but included under "all other nuts."

**The Pecan.**

The pecans grow well in the lower lands of the interior valleys, but are raised in only limited quantities. The most favorable reports of pecan production on the Pacific coast have come from the interior valleys of central and northern California. Very favorable reports have been received from small orchards and scattered trees (mainly seedlings) from Chico, Woodland, Winters, Vacaville, Elk Grove, Stockton, Farmington, Patterson, Fresno, and Bakersfield. Reports from Anaheim and Whittier, in southern California, where great trouble is experienced with pecan rosette, have been much less encouraging. In the opinion of one of the leading practical horticulturists of the San Joaquin Valley, the pecan offers greater inducements for that particular section than does the almond or the walnut (Persian).

"Of the eight or nine species of hickories the one which produces the most marketable fruit and in the most profitable quantities is the pecan. A native of the Southern States, it is today the only nut (which has any commercial importance) which is grown there, and to a limited

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

extent in the Middle States. Texas is probably the largest producer of pecans, the crop aggregating several millions of pounds.

Old seedling pecan trees are found growing and producing heavy crops annually in the Sacramento and San Joaquin valleys. A number of seedling trees, two feet and over in diameter, are growing one mile north of Fresno, bearing abundant crops.

It is only within the last ten years that pecans have been regarded of sufficient commercial importance to cause groves to be planted in the middle and Southern States, and the condition of affairs has been brought about by the unexcelled merit of the paper-shell pecan. In California only a very few paper-shells are to be found; none of these are over fifteen years old."

#### The Pistachio.

This nut is a native of Syria, and is generally cultivated in the Mediterranean region. The trees do exceedingly well in the Sacramento and San Joaquin valleys in California. A few of the grafted trees of some of the commercial varieties in the Chico test orchard are bearing a few nuts this season. Seedling trees near Fresno have borne large crops of nuts for some years. Mr. Walter T. Swingle and several others who have studied the subject, and are familiar with the conditions believe that in the not distant future pistache culture will be an established commercial industry of considerable importance in this country.

The peculiar beauty of the Chinese pistache and the great age to which it lives have suggested its trial as an avenue tree. A trial avenue a quarter of a mile long, planted at the Chico garden in 1910, already makes an excellent appearance.

The small, green-fleshed nuts are most excellent to eat when roasted and salted, and are extensively used in the coloring and flavoring of ice cream and confections. The entire supply of these nuts at present comes from abroad. This country can, and surely should, grow what it needs.

"Comparatively little is known about the pistachio, or green almond. It is particularly well adapted to the warm interior valleys. The trees are of very easy culture, thrive on a great variety of soils and are, as a matter of fact, very much hardier than the fig and the olive. As border trees they are very attractive, and I have every reason to believe they will prove quite profitable. They would be used by the foreign population much more extensively than they are if the price at which they are sold, from sixty to eighty cents per pound, was not so high. The importations are estimated to average \$200,000 per annum. There is no question about the future of this industry, though up to the present time it is still in the experimental stage. It is largely through the efforts of the Bureau of Plant Industry of the United States Department of Agriculture that varieties of merit have been introduced in recent years. I am giving now, and have given for several years, considerable time and thought to the culture of this nut, and I am confident that the time is not far distant when it will become another valuable acquisition to our list of horticultural products.'"

\*From Roeding's Fruit Growers' Guide, Fresno, 1919.

## Imported Nuts, 1909 - 1919.

(Duty on imported peanuts, unshelled,  $\frac{3}{4}$  of 1 per cent per pound; shelled,  $\frac{3}{4}$  of 1 per cent per pound; all others (except almonds, peanuts and walnuts) 1 cent per pound.)

Year	Peanuts and other ground nuts		Miscellaneous nuts, value	Total value, all nuts*
	Pounds	Value		
1909.....			\$1,717,374	\$8,664,253
1910.....	29,276,235	\$1,234,088	1,218,052	13,246,742
1911.....	18,834,441	765,033	1,254,943	14,498,413
1912.....	15,558,038	575,282	858,837	15,827,988
1913.....	18,756,422	769,666	977,161	13,965,569
1914.....	44,549,789	1,899,237	1,357,520	19,782,924

## APPENDIX A.

## CALIFORNIA STATE BOARD OF AGRICULTURE

## State Boards of Agriculture and Agricultural Experiment Stations in the United States.

There are 43 official bodies or organizations in the United States charged with the promotion of agriculture. Of these 20 are "State Boards of Agriculture"; 19 are governed by a "Commissioner of Agriculture;" 3, California, Georgia and Minnesota have a "State Agricultural Society," and Pennsylvania a "Secretary of Agriculture." Of the above, California is the only one with a dual title, that of the "State Agricultural Society" and "State Board of Agriculture," added in 1863. There are also 60 agricultural experiment stations, conducted, in most cases, under the authority of the state universities.

The first agricultural experiment stations were formed some forty-five years ago, one of the pioneers being that of the State University at Berkeley in 1873. They were subsequently reorganized under the Hatch Act of 1887, which largely extended the number of these most valuable institutions.

## Stallion Registration Boards.

The first law regulating the registration of stallions was passed by the state of Wisconsin in 1906, since which time twenty-three other states have taken this important step to improve the breed of their horses. The Stallion Registration in California dates from August 1, 1911.

## California State Agricultural Society.

(Incorporated May 13, 1854. State Board of Agriculture appointed March 12, 1863.)

The California State Agricultural Society was one of the first to be organized, and ranks as fifth in the United States.

The first State Fair was held in the Music Hall at San Francisco from the fourth to about the twelfth of October, 1854, and the stock show was held on the Pioneer race course. A fair has been held annually ever since—in 1855 at Sacramento, 1856 at San Jose, 1857 at Stockton, 1858 at Marysville, and since then at Sacramento, except in 1915, when it was omitted on account of the Panama-Pacific International Exposition at San Francisco.

Many of the books and records of the Society were destroyed by a disastrous flood on the 9th of December, 1861, and 9th of January, 1862, caused by a break in the levee on the north side of Sacramento, and the Library, together with a complete set of the Annual Reports, was destroyed by fire on the 3d of September, 1916, when the main building was burned to the ground.

## CALIFORNIA STATE FAIR, 1854-1920.

Year	Place	Date	Premiums	Races	Total	Presidents
1854	San Francisco	Oct. 4-----	\$4,660	-----	\$4,660	F. W. Macondry, San Francisco.
1855	Sacramento	Sept. 25-Oct. 1..	6,550	-----	6,550	C. T. Hutchinson, Sacramento.
1856	San Jose	Oct. 7-10-----	6,746	-----	6,746	E. L. Beard, Alameda.
1857	Stockton	Sept. 29-Oct. 2..	7,991	-----	7,991	C. M. Weber,* Stockton.
1858	Marysville	Aug. 23-28-----	7,435	-----	7,435	John C. Fall, Marysville.
1859	Sacramento	Sept. 13-23-----	8,139	-----	8,139	C. T. Hutchinson, Sacramento.
1860	Sacramento	Sept. 19-26-----	8,827	-----	8,827	T. G. Phelps, San Mateo.
1861	Sacramento	Sept. 16-21-----	7,231	-----	7,231	Jerome C. Davis, Yolo County.
1862	Sacramento	Aug. 31-Sept. 4..	-----	-----	5,000	A. Harasothy, Sonoma.
1863	Sacramento	Sept. 25-Oct. 3..	4,894	-----	4,894	Judge Isaac Davis, Yolo County.
1864	Sacramento	Oct. 17-22-----	6,105	-----	6,105	C. F. Reed, Grafton, Yolo County.
1865	Sacramento	Sept. 18-23-----	10,658	-----	10,658	C. F. Reed, Grafton, Yolo County.
1866	Sacramento	Sept. 10-15-----	9,742	-----	9,742	C. F. Reed, Grafton, Yolo County.
1867	Sacramento	Sept. 9-14-----	9,954	-----	9,954	C. F. Reed, Grafton, Yolo County.
1868	Sacramento	Sept. 15-25-----	-----	-----	10,000	C. F. Reed, Grafton, Yolo County.
1869	Sacramento	Sept. 6-11-----	-----	-----	-----	C. F. Reed, Grafton, Yolo County.
1870	Sacramento	Sept. 12-17-----	-----	-----	30,000	C. F. Reed, Grafton, Yolo County.
1871	Sacramento	Sept. 18-23-----	-----	-----	40,000	C. F. Reed, Grafton, Yolo County.
1872	Sacramento	Sept. 19-23-----	-----	-----	20,000	C. F. Reed, Grafton, Yolo County.
1873	Sacramento	Sept. 15-20-----	8,925	14,200	23,125	R. S. Carey, Yolo.
1874	Sacramento	Sept. 21-28-----	9,619	15,950	25,569	R. S. Carey, Yolo.
1875	Sacramento	Sept. 15-26-----	9,214	13,330	22,544	R. S. Carey, Yolo.
1876	Sacramento	Sept. 18-23-----	-----	-----	-----	R. S. Carey, Yolo.
1877	Sacramento	Sept. 17-22-----	-----	-----	-----	Marion Biggs, Butte.
1878	Sacramento	Sept. 16-21-----	10,965	13,775	24,740	Marcus D. Boruck, San Francisco.
1879	Sacramento	Sept. 8-13-----	-----	12,260	12,260	Hugh M. Larue, Sacramento.
1880	Sacramento	Sept. 20-25-----	6,502	14,885	21,387	Hugh M. Larue, Sacramento.
1881	Sacramento	Sept. 19-24-----	6,603	12,525	19,128	J. M. McShafter, San Francisco.
1882	Sacramento	Sept. 11-16-----	8,651	14,262	22,913	Hugh M. Larue, Sacramento.
1883	Sacramento	Sept. 10-15-----	8,915	11,005	22,920	P. A. Fingan, Alameda.
1884	Sacramento	Sept. 8-20-----	11,467	23,165	34,632	P. A. Fingan, Alameda.
1885	Sacramento	Sept. 10-19-----	13,612	25,145	38,757	Jesse D. Carr, Salinas.
1886	Sacramento	Sept. 9-18-----	13,370	22,900	36,270	Jesse D. Carr, Salinas.
1887	Sacramento	Sept. 15-21-----	14,538	23,470	38,008	L. U. Shippee, Stockton.
1888	Sacramento	Sept. 6-15-----	14,256	25,560	38,816	L. U. Shippee, Stockton.
1889	Sacramento	Sept. 12-21-----	17,056	30,860	47,916	Christopher Green, Sacramento.
1890	Sacramento	Sept. 11-20-----	15,761	27,016	42,777	Christopher Green, Sacramento.
1891	Sacramento	Sept. 8-19-----	17,628	30,081	47,709	Frederick Cox, Sacramento.
1892	Sacramento	Sept. 5-17-----	17,106	29,950	47,056	Frederick Cox, Sacramento.
1893	Sacramento	Sept. 4-16-----	13,244	32,715	45,959	John Boggs, Princeton, Colusa Co.
1894	Sacramento	Sept. 3-15-----	13,447	29,220	42,667	John Boggs, Princeton, Colusa Co.
1895	Sacramento	Sept. 2-14-----	11,416	32,880	44,296	C. M. Chase, San Francisco.
1896	Sacramento	Sept. 1-19-----	12,971	47,222	60,193	C. M. Chase, San Francisco.
1897	Sacramento	Sept. 6-18-----	20,252	35,247	55,499	C. M. Chase, San Francisco.
1898	Sacramento	Sept. 5-17-----	20,163	28,170	48,333	A. B. Spreckels, San Francisco.
1899	Sacramento	Sept. 4-16-----	10,529	38,745	49,274	A. B. Spreckels, San Francisco.
1900	Sacramento	Sept. 3-15-----	9,768	38,745	48,513	A. B. Spreckels, San Francisco.
1901	Sacramento	Sept. 2-14-----	8,974	30,355	39,329	A. B. Spreckels, San Francisco.
1902	Sacramento	Sept. 8-20-----	15,000	40,280	55,280	A. B. Spreckels, San Francisco.
1903	Sacramento	Aug. 31-Sept. 12	15,000	31,435	46,435	Benjamin F. Rush, Suisun.
1904	Sacramento	Aug. 22-Sept. 3..	15,000	28,597	43,597	Benjamin F. Rush, Suisun.
1905	Sacramento	Sept. 2-9-----	6,656	24,419	31,075	Benjamin F. Rush, Suisun.
1906	Sacramento	Aug. 25-Sept. 1..	7,598	10,670	18,460	Benjamin F. Rush, Suisun.
1907	Sacramento	Sept. 2-14-----	11,153	14,914	26,067	Benjamin F. Rush, Suisun.

## APPENDIX B.

## COUNTY COMMISSIONERS OF HORTICULTURE.

County	Horticultural Commissioners	Address
Alameda	Fred Soulberger, 418 Fourteenth st. D. P. Macdonald, Deputy Commissioner, 418 Fourteenth st.	Oakland. Oakland. Ione. Oroville. Chico. San Andreas. Colusa. Concord. Placerville. Fresno. Orland. Eureka. El Centro. Bigpine. Bakersfield. Hanford. Kelseyville. Susanville. Los Angeles. Madera. San Rafael. Ukiah. Merced. Davis Creek. Aromas. Salinas.
Amador	J. Marchant	
Butte	Earle Mills T. F. Stille, Deputy Commissioner	
Calaveras	J. B. Luddy	
Colusa	L. R. Boedefeld	
Contra Costa	V. G. Stevens	
El Dorado	John A. Winkleman	
Fresno	Fred P. Roullard	
Glenn	H. W. Kingswell	
Humboldt	John F. Benton	
Imperial	F. W. Waite	
Inyo	John W. Dixon	
Kern	Kent S. Knowlton	
Kings	Lawrence O. Haupt, Court House	
Lake	Fred G. Stokes	
Lassen	F. H. Taylor	
Los Angeles	H. J. Ryan, Hall of Records	
Madera	Geo. Marchbank	
Marin	Thos. P. Redmayne	
Mendocino	E. W. Dutton	
Merced	Arthur E. Beers	
Modoc	Thos. Briles	
Monterey	J. B. Hickman J. O. McKinney, Deputy Commissioner, P. O. box 242.	
Napa	W. D. Butler	Napa.
Nevada	D. F. Norton	Grass Valley.
Orange	Earl L. Morris	Santa Ana.
Placer	C. K. Turner	Auburn.
Riverside	D. D. Sharp	Riverside.
Sacramento	Fred C. Brosius, Court House	Sacramento.
San Benito		Hollister.
San Bernardino	John P. Coy	San Bernardino.
San Diego	G. R. Gorton, Court House	San Diego.
San Francisco	Dudley Moulton, Board of Supervisors, Clerk's Office	San Francisco.
San Joaquin	H. H. Ladd, Court House	Stockton.
San Luis Obispo	H. E. Alley	San Luis Obispo.
San Mateo		Redwood City.
Santa Barbara	Eugene S. Kellogg	Santa Barbara.
Santa Clara	L. R. Cody	San Jose.
Santa Cruz	Donald D. Penny	Watsonville.
Shasta	B. F. Stroup	Anderson.
Siskiyou	W. L. Kleaver	Yreka.
Solano		Vacaville.
Sonoma	O. E. Bremner	Santa Rosa.
Stanislaus	A. L. Rutherford	Modesto.
Sutter	H. P. Stabler	Yuba City.
Tehama	G. H. Flourney	Red Bluff.
Tulare	Chas. F. Collins C. H. Doyle, Deputy Commissioner	Visalia. Porterville.
Tuolumne	H. H. Sherrard	Sonora.
Ventura	A. H. Call	Santa Paula.
Yolo	Wm. Gould Harold Van Tassel, Deputy Commissioner, P. O. Box 199.	Woodland. Sacramento.
Yuba	G. W. Harney	Marysville.

## FARM ADVISERS OF CALIFORNIA.

County	Name	Address
Alameda	Prof. M. A. W. Lee, Chamber of Commerce E. R. Temperli, Assistant.	Hayward.
Butte	H. F. Drobish, Chamber of Commerce.	Oroville.
Contra Costa	A. M. Burton.	Martinez.
El Dorado	Prof. Burle J. Jones.	Placerville.
Fresno	Dr. J. P. Benson, 317 Holland Building. Frank Murphy, Assistant. Homer R. Keller, Assistant.	Fresno.
Glenn	G. A. Goatley, Federal Building. Homer R. Keller, Assistant.	Willows.
Humboldt	Dr. J. W. Logan, 622 Third Street.	Eureka.
Imperial	E. L. Garthwaite, Court House. Raymond Ellis, Assistant.	El Centro.
Kern	M. A. Rice, Court House. R. H. Kiant, Assistant.	Bakersfield.
Kings	W. Sullivan.	Hanford.
Los Angeles	R. W. Hodgson, 361 Court House. C. F. Blanchard, Assistant. C. E. Gordon, Assistant. B. C. Bougher, Assistant.	Los Angeles.
Madera	E. F. Smyth, Chamber of Commerce.	Madera.
Marin	Mr. Bosavaine.	San Rafael.
Mendocino	Prof. Chas. S. Myszka.	Ukiah.
Merced	J. F. Grass, Jr., F. B. Office. J. A. McPhee, Assistant. T. O. Mayhew, City Hall. E. J. Campbell, Assistant.	Merced.
Monterey	Prof. H. J. Baade, Court House. W. F. Carroll, Assistant.	Salinas.
Napa	Prof. H. J. Baade, Court House. W. F. Carroll, Assistant.	Napa.
Nevada	H. I. Graser.	Grass Valley.
Orange	H. E. Wahlberg, 508 N. Main st. John Waters, Assistant.	Santa Ana.
Placer	E. O. Amundsen, Court House.	East Auburn.
Riverside	R. E. Nebelung, Telephone Building. J. F. Osborne, Assistant.	Riverside.
San Bernardino	Prof. D. S. Fox, 438 Court Street. B. H. Ormand, Assistant.	San Bernardino.
Sacramento	L. Y. Leonard, Court House. R. L. Hooper, Assistant.	Sacramento.
San Diego	J. G. France, Chamber of Commerce.	San Diego.
San Joaquin	J. W. Adriaance, Chamber of Commerce. F. M. Spurrier, Assistant.	Stockton.
Santa Cruz	H. L. Washburn, 4 Cooper st. W. J. Tocher, Assistant.	Santa Cruz.
Shasta	Prof. Parker Talbot, Court House.	Redding.
Solano	J. W. Mills, Court House.	Fairfield.
Sonoma	Prof. H. A. Weinland. M. W. Buster, Assistant. H. P. Everett, Assistant.	Santa Rosa.
Stanislaus	A. A. Jungermann, P. O. box 877. R. D. McCallum, Assistant.	Modesto.
Santa Barbara	D. R. Batchelder.	Santa Barbara.
Sutter	C. E. Sullivan, Mission Hall.	Yuba City.
Tehama	E. W. Curtis, Chamber of Commerce.	Red Bluff.

Ventura	O. C. Staunton, Court House.	Ventura.
Yolo	W. D. Norton, Court House.	Woodland.
Yuba	Wm. Harrison, Chamber of Commerce.	Marysville.

## Itinerant Assistants.

J. E. Tippet, Room 106, Agricultural Hall, Berkeley.  
 L. W. Taylor, Room 106, Agricultural Hall, Berkeley.  
 R. B. Easson, Room 104, Agricultural Hall, Berkeley.

## APPENDIX C.

## NATIONAL AND CALIFORNIA AGRICULTURAL ASSOCIATIONS.\*

## Horses.

American Hackney Horse Society	Hempstead, New York
American Shire Horse Society	Bushnell, Illinois
American Saddle Horse Breeders' Association	Lexington, Kentucky
Arabian Horse Club of America	1729 G St., Washington, D. C.
Coach Horse Association of America	Lafayette, Indiana
French Coach Horse Society of America	Maple Ave. and Harrison St., Oak Park, Ill.
German, Hanoverian and Oldenburg	
Standard Bred: American Trotting Registered Association	
	137 South Ashland Ave., Chicago, Ill.
Thoroughbreds: The Jockey Club	New York, New York
Percheron Society of America	Stockyards, Chicago, Illinois
Pacific Coast Saddle Horse Breeders' Association	Dr. W. J. Smyth, Secretary
	Union Savings Bank, Oakland, California
Pacific Coast Trotting Horse Breeders' Association	Oakland, California

## STATES HAVING STALLION REGISTRATION LAWS.

State	Name and location	Date of organization
California	Stallion Registration Board, Sacramento	Aug. 1, 1911
Colorado	State Board of Stock Inspection Commissioners, Denver	Aug. 5, 1911
Idaho	Stallion Registration Board, Moscow	Mar. 15, 1909
Illinois	Stallion Registration Board, Springfield	Jan. 1, 1910
Iowa	Stallion Registration Board, Des Moines	Mar. 30, 1907
Kansas	State Livestock Registry Board, Manhattan	April 3, 1910
Michigan	Agricultural College, East Lansing	Aug. 1, 1911
Minnesota	Stallion Registration Board, St. Paul	April 25, 1907
Missouri	Missouri Stallion Registration Board, Columbia	Jan. 1, 1918
Montana	Bureau of Agriculture, Labor Industry and Publicity, Helena	Mar. 8, 1909
Nebraska	Stallion Registration Board, Lincoln	July 7, 1911
New Jersey	Stallion Registration Board, New Brunswick	Sept. 1, 1908
New York	New York Stallion Registration Board, Albany	Aug. 1, 1916
North Dakota	Stallion Registration Board, Fargo	Jan. 1, 1910
Oklahoma	Oklahoma State Live Stock Registration Board, Stillwater	Feb. 25, 1915
Oregon	Stallion Registration Board, Corvallis	May 20, 1911
Pennsylvania	Stallion Registration Board, Harrisburg	Jan. 1, 1908
South Dakota	Stallion Registration Board, Brookings	Mar. 9, 1909
Utah	Stallion Registration Board, Logan	May 13, 1907
Washington	Stallion and Jack Registration Office, State College, Pullman	June 8, 1910
Wisconsin	Stallion Registration Board, Madison	Jan. 1, 1906

## Cattle.

American National Livestock Association	Denver, Colorado
American Hereford Cattle Breeders' Association	
	625 Finance Building, Kansas City, Missouri
American Polled Hereford Cattle Breeders' Association	Des Moines, Iowa
American Jersey Cattle Club, R. M. Gow, Secretary	
	324 West Twenty-third Street, New York, N. Y.
American Polled Jersey Cattle Club	R. F. D. No. 4, Springfield, Ohio
American Guernsey Cattle Club, Wm. H. Caldwell	Peterboro, New Hampshire
American Devon Cattle Club, L. P. Sisson, Secretary	Charlottesville, Virginia
American Polled Durham Breeders' Association, J. H. Martz, Secretary	
	Greenville, Ohio
American Shorthorn Breeders' Association, F. W. Harding, Secretary	
	No. 13 Dexter Park Avenue, Union Stockyards, Chicago, Illinois

\*This is only a partial list as there are many county and local organizations too numerous to include in this summary.

Holstein-Friesian Association of America, L. F. Houghton, Secretary	-----	Brattleboro, Vermont
Red Polled Cattle Club of America, H. A. Martin, Secretary	-----	Gotham, Wisconsin
American Aberdeen-Angus Breeders' Association	-----	817 Exchange Avenue, Chicago, Illinois
American Galloway Breeders' Association	-----	Carrollton, Missouri
American Kerry and Dexter Cattle Club, C. S. Plum, Secretary	-----	Ohio State University, Columbus, Ohio
Ayrshire Breeders' Association, C. M. Winslow, Secretary	-----	Brandon, Vermont
Dutch Belted Cattle Association of America, G. G. Gibbs, Secretary	-----	Marksboro, New Jersey
Brown Swiss Cattle Breeders' Association, Ira Inman, Secretary	-----	Beloit, Wisconsin
California Cattlemen's Association	-----	320 Sharon Building, San Francisco, California
California Holstein-Friesian Association	-----	Sacramento, California
California Jersey Breeders' Association	-----	Lockeford, California

### Sheep.

American Southdown Breeders' Association	-----	510 Monroe St., Springfield, Illinois
American Shropshire Register Association	-----	Lafayette, Indiana
American Oxford Down Record Association	-----	Hamilton, Ohio
The Continental Dorset Club	-----	Mechanicsburg, Ohio
American Cheviot Sheep Society	-----	Fayetteville, New York
American Tunis Sheep Breeders' Association	-----	Crawfordsville, Indiana
American Cotswold Registry Association	-----	Waukesha, Wisconsin
National Lincoln Sheep Breeders' Association	-----	Charlotte, Michigan
American Leicester Breeders' Association	-----	Cameron, Illinois
American Romney Breeders' Association	-----	Mechanicsburg, Ohio
American and Delaine, Merino Record Association	-----	Delaware, Ohio
American Rambouillet Sheep Breeders' Association	-----	Milford Center, Ohio
American Hampshire Sheep Association	-----	36 Woodland Avenue, Detroit, Michigan

### Goats.

American Angora Goat Breeders' Association	-----	Lawrence, Kansas
American Milk Goat Record Association, J. C. Darst, Secretary	-----	Dayton, Ohio
California Woolgrowers' Association, Prof. Robt. F. Miller, Secretary	-----	University Farm, Davis, California
National Association of Wool Manufacturers	-----	50 State Street, Boston, Massachusetts

### Swine.

American Berkshire Association	-----	Springfield, Illinois
American Hampshire Swine Record Association	-----	Peoria, Illinois
American Yorkshire Club	-----	White Bear Lake, Michigan
American Poland China Record Association	-----	Union Stockyards, Chicago, Illinois
National Poland China Record Association	-----	Winchester, Indiana
National Duroc-Jersey Record Association	-----	Peoria, Illinois
National O. T. C. Chester White Record Association	-----	Hastings, Nebraska
California Swine Breeders' Association, R. P. Boyce, Secretary	-----	University Farm, Davis, California

### Poultry and Dairy.

American Poultry Association	-----	St. Louis, Missouri
Poultry Keepers' Association	-----	Petaluma, California
Poultry Producers of Central California	-----	612 Underwood Building, San Francisco, California
Southern California Poultrymen's Association, Jos. Davis, Secretary	-----	Los Angeles, California
Poultry Producers of Southern California	-----	Los Angeles, California
Stanislaus Poultry and Pet Stock Association	-----	Modesto, California
San Joaquin Poultry Association	-----	Stockton, California
Pasadena Poultry, Pigeon and Pet Stock Association	-----	Pasadena, California
Associated Milk Producers, Inc.	-----	53 Clay St., San Francisco, California
A. J. Homen, Secretary.	-----	
California Milk Producers' Association of Central California, Bacon Blk., Oakland	-----	
C. H. Geer, President.	-----	
H. J. Faulkner, General Manager.	-----	
California Milk Producers	-----	1505 S. Main St., Los Angeles, California
B. A. Rhoades, President.	-----	
T. H. Brice, Secretary-Manager.	-----	
Northern California Milk Producers' Assn.	-----	Fruit Bldg., Sacramento, California
J. M. Henderson, Jr., President, Sacramento Bank, Sacramento.	-----	
H. M. Ellis, Secretary.	-----	
San Joaquin Valley Milk Producers' Association	-----	Cory Bldg., Fresno, California
Fred W. Hansen, President and Manager.	-----	
J. A. Schlotthauer, Secretary.	-----	
Milk Producers' Association of San Diego County	-----	310 Central Mortgage Bldg., San Diego, California
Douglas Young, Manager.	-----	

### Hares and Rabbits.

National Association of Commercial Giant Breeders	-----	323 Richland Ave., San Francisco, California
California Rabbit Breeders' Association	-----	2157 Encinal Ave., Alameda, California

## Fruit Associations.

California Fruit Growers' Exchange	Los Angeles, California
Citrus Protective League of California	Los Angeles, California
California Fruit Exchange	Sacramento, California
California Fruit Distributors	Sacramento, California
California Associated Raisin Company	Fresno, California
California Pear Growers' Association	510 Battery St., San Francisco, California
California Prune and Apricot Growers' Association	San Jose, California
California Peach Growers' Association	Fresno, California
California Fig Growers' Association	Cory Building, Fresno, California
California Avocado Association	Experiment Station, Riverside, California
American Date Company	206 Wright & Callendar Bldg., Los Angeles, California
Coachella Valley Co-operative Date Growers' Syndicate	Indio, California
California Associated Olive Growers, Incorporated	
	721 Balboa Building, San Francisco, California
American Olive Company, Adam St. and Long Beach Ave.,	Los Angeles, California
California Ripe Olive Company	Oroville, California

## APPENDIX D.

---

### Acts Relating to the Management and Control of the State Agricultural Society.\*

- Chapter 60—To provide for the management and control of the State Agricultural Society by the state. Approved April 15, 1880.
- Chapter 307—An act to amend the above act. Approved June 11, 1913.
- Chapter 570—An act to amend the above act. Approved May 29, 1915.

## STATISTICS.

- Chapter 584—An act to provide for the collection, compilation and publication of agricultural and other industrial statistics for the state of California, and making an appropriation therefor. Approved April 25, 1911.

---

---

\*The California State Agricultural Society was one of the first to be organized, and ranks as fifth in the United States.  
Incorporated May 13, 1854.  
State Board of Agriculture appointed March 12, 1863.

## CHAPTER 60.

*An act to provide for the management and control of the state agricultural society by the state.*

[Approved April 15, 1880.]

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. The state agricultural society is hereby declared to be a state institution.

SEC. 2. Within ten days after the passage of this act, the governor shall appoint twelve resident citizens of the state, who shall, when organized constitute a state board of agriculture, who shall, except as hereinafter provided, hold office for the term of four years, and until their successors are appointed and qualified. Vacancies occurring from any cause in the board shall be filled by appointment of the governor for the unexpired term of the office vacated.

SEC. 3. Within ten days after their appointment, the persons so appointed shall qualify, as required by the constitution, and shall meet at the office of the state agricultural society and organize by the election of one of their number as president of the board and said society, who shall hold said office of president for the term of one year, and until his successor is elected and qualified. The board shall also elect a secretary and treasurer, not of their number, who shall each hold office at the discretion of the board.

SEC. 4. At the same meeting, the members of the board shall, by lot or otherwise, classify themselves into four classes of three members each. The terms of office of the first class shall expire at the end of the first fiscal year; of the second class, of the second year; of the third class, of the third year; of the fourth class, at the end of the full term of four years. The fiscal year shall be from the first of February to the first of February.

SEC. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules of the society, to adapt the same to the provisions of this act, and to the management of the society, its meetings and exhibitions. They shall provide for an annual fair or exhibition by the society of all the industries and industrial products of the state, at the city of Sacramento; *provided*, that in no event shall the state be liable for any premium awarded or debt created by said board of agriculture.

SEC. 6. The board shall have power to appoint all necessary marshals and police to keep order and preserve peace at the annual fairs of the society; and the officers so appointed shall be vested with the same

authority for the preservation of order and peace, on the grounds and in the buildings of the society, that executive peace officers are vested with by law.

SEC. 7. Said board shall use all suitable means to collect and disseminate all kinds of information calculated to educate and benefit the industrial classes, develop the resources, and advance the material interests of the state, and shall, on or before the first day of February of each year, report to the governor a full and detailed account of their transactions, statistics, and information gained, and also a full financial statement of all funds received and disbursed. They shall also make such suggestions and recommendations as experience and good policy may dictate for the improvement and advancement of the agricultural and kindred industries.

SEC. 8. The superintendent of state printing shall, each year, print and bind in cloth four thousand volumes of said transactions, and deliver the same to said board of agriculture for distribution and exchange. He shall also do such job printing as said board may require to carry out the provisions of this act.

SEC. 9. The directors or boards of managers of each county and district agricultural society or association, and of county, district, or state horticultural and stock breeding association or society, organized, and acting under the laws of this state, shall report annually, on or before the first day of April, to the state board of agriculture, the name and post-office address of each officer of such society or association; and, on or before the first day of December, shall report to said board of agriculture the transactions of said society, including the premiums offered, the list of stock and articles exhibited, and the premiums paid; the amount of receipts and expenditures for the year, the new industries inaugurated, and any and all facts and statistics showing the development and extent of the industries, products, and resources of the county or district embraced within the management of such society or association; *provided*, that the provisions of this act shall not apply to any board of commissioners or other body organized under the laws of this state, the object of which is to promote vinicultural industries, unless such board or body shall voluntarily request the privilege of making such reports as are called for by this act, in which case such board or body shall enjoy equal privileges as are accorded to other institutions devoted to agriculture.

SEC. 10. To facilitate such reports, the state board of agriculture shall have prepared, and shall furnish such societies with necessary schedules and blanks for such reports; said state board shall include such reports from societies and associations, or so much thereof as they may deem advisable, in their report to the governor.

SEC. 11. When said state board of agriculture shall have been organized and classified as provided herein, the secretary of the board shall report such organization and classification to the governor. He shall also report any vacancy that may occur in said board at any time.

SEC. 12. All laws and parts of laws in conflict with this act are hereby repealed.

SEC. 13. This act shall take effect and be in force from and after its passage.

## CHAPTER 307.

*An act to amend an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880.*

[Approved June 11, 1913.]

*The people of the State of California do enact as follows:*

SECTION 1. Section five of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, is hereby amended to read as follows:

Sec. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property, and be intrusted with the direction of its entire business and financial affairs. They shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules of the society; to adapt the same to the provisions of this act, and to the management of the society, its meetings, and exhibitions. They shall provide for an annual fair or exhibition by the society of all the industries and industrial products of the state, at the city of Sacramento; *provided*, that in no event shall the state be liable for any premium awarded or debt created by said board of agriculture; *provided, further*, that the collections and receipts from other sources than state appropriations shall be reported monthly by the secretary to the controller of state and shall be paid into the state treasury. Such receipts shall be credited to the state agricultural society contingent fund, which is hereby created, and shall be for the use of the society.

---

CHAPTER 570.

*An act to amend sections one and five of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, as amended and approved June 11, 1913.*

[Approved May 29, 1915.]

*The people of the State of California do enact as follows:*

SECTION 1. Section one of an act entitled "An act to provide for the management and control of the state agricultural society by the state," approved April 15, 1880, as amended June 11, 1913, is hereby amended to read as follows:

Section 1. The state agricultural society is hereby declared to be a state institution; *provided*, that all rights and privileges which have

heretofore accrued to members of said society under its rules, either through payments made or by services rendered, are hereby recognized and continued.

SEC. 2. Section five of said act is hereby amended to read as follows:

Sec. 5. The state board of agriculture shall be charged with the exclusive management and control of the state agricultural society as a state institution; shall have possession and care of its property and be intrusted with the direction of its entire business and financial affairs. It shall define the duties of the secretary and treasurer, fix their bonds and compensation, and shall have power to make all necessary changes in the constitution and rules for the society, to adapt the same to the provisions of this act and to the management of the society, its meetings and exhibitions. It shall provide for an annual fair or exposition by said society of the industries and industrial products of this state and commercial products exported and imported through the ports of this state at the city of Sacramento each year; *provided*, that in any year during which an international exposition conducted in whole or in part under the auspices of the State of California and endorsed by the United States government, is held within the State of California and the state board of agriculture deems it inexpedient to hold a state fair, the funds of the state agricultural society for that year only may be expended in cooperation with the management of said exposition to provide for a proper exploitation of the industries of California at such exposition; *provided, further*, that in no event shall the state be liable for any premium awarded or debt created by the said state board of agriculture; *provided, further*, that the collections and receipts from sources other than state appropriations, shall be reported monthly by the secretary to the controller of state, and shall be paid to the state treasury. Such receipts shall be credited to the state agricultural society contingent fund, which is hereby created, and shall be solely for the use of the society.

---

## CHAPTER 584.

*An act to provide for the collection, compilation and publication of agricultural and other industrial statistics for the State of California, and making an appropriation therefor.*

[Approved April 25, 1911.]

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. The board of directors of the state agricultural society are authorized, and it is hereby made their duty, to collect, compile and publish annually, on or before the 31st day of January in each year, statistics showing the yield of agricultural and other farm and industrial products of the State of California for each preceding year, and shall, as nearly as may be practicable, ascertain and publish each year the number of acres of land within the state that are under irrigation, and

the number, location and extent of any new irrigation enterprises, exclusive of individual pumping plants, that may have been started within the state during the preceding year.

SEC. 2. For the purpose of carrying out the provisions of this act, the sum of five thousand (\$5,000.00) dollars per annum is hereby appropriated out of any money in the state treasury not otherwise appropriated, and the controller is hereby authorized to draw his warrant from time to time up to the amount of said appropriation in favor of the board of directors of the state agricultural society, and the state treasurer is hereby authorized and directed to pay the same.

## LETTER OF TRANSMITTAL.

SAN FRANCISCO, CALIFORNIA,

July 1, 1920.

*To His Excellency WILLIAM D. STEPHENS,  
Governor of the State of California,  
Sacramento, California.*

SIR: In accordance with section 332 of the Political Code of the State of California we have the honor to submit for your consideration the twenty-sixth biennial report of the Fish and Game Commission. Herein you will find a complete record of the activities of this Commission, for the period July 1, 1918, to June 30, 1920, together with the financial statement covering the two fiscal years, showing the receipts and expenditures for the biennial period.

The intimate details concerning the work of the different departments may be found in the reports of the several heads of departments. We commend them to your careful perusal.

There has been no change in the membership of the Commission itself but a change was made in its Executive Officer, Mr. Charles A. Vogelsang succeeding Mr. Carl Westerfeld to this important office on the twenty-eighth of April, 1920.

Respectfully submitted.

(Signed) F. M. NEWBERT, *President.*

(Signed) M. J. CONNELL.

(Signed) E. L. BOSQUI.

*Board of Fish and Game Commissioners.*

By CHAS. A. VOGELANG,  
*Executive Officer.*

## IN MEMORIAM.

### **Romer I. Bassler, Foreman in Charge Klamath Stations.** (Died 1918.)

Mr. Bassler entered the employ of the Fish and Game Commission in 1908 and was employed as a fishculturist and as an employee in the car messenger service until 1915. In 1915 he was appointed superintendent of Distribution Car No. 2, and served in that capacity until the spring of 1918, when his health broke down, owing in a great measure to the arduous duties of his position.

---

### **Frank Shebley, Superintendent Mount Whitney Hatchery.** (Died December 21, 1918.)

Mr. Shebley entered the service of the Fish and Game Commission in 1894 and was employed as fish culturist for several years at the Tahoe and Mount Shasta hatcheries. In 1898, he was made superintendent of the Eel River Hatchery. In 1905, he accepted a position as fishculturist for the county of Santa Cruz and established the Brookdale Hatchery, which he operated until 1912, when the property was turned over to the State Fish and Game Commission under a lease. He was appointed superintendent of the new Mount Whitney Hatchery in 1917, and investigated the lakes and streams of the southern Sierras.

---

### **O. H. Richling, Cashier.** (Died November 9, 1919.)

Mr. Richling was appointed a special deputy October 24, 1903, in Amador County. On account of excellent work he was given a regular appointment on March 24, 1908, in the San Francisco office. At the time of his death he held the very responsible position of cashier.

---

### **Frank Clessens, Assistant Mount Shasta Hatchery.** (Died November, 1919.)

Mr. Clessens entered the service of the Fish and Game Commission in 1903, and was employed as carpenter and assistant in general work at the Mount Shasta Hatchery from that date until his death. His services were marked by the highest degree of loyalty and dependability. He was always faithful in the discharge of his duties and was on hand at any hour of the night to see that everything was running properly.

---

### **Chester A. Scroggs, Deputy Fish and Game Commissioner.** (Died January 22, 1920.)

Mr. Scroggs was first appointed June 19, 1908, with headquarters at Loomis, Placer County. He was a fearless officer and made a most excellent record during his twelve years of service.

---

### **Forest Nesbitt, Deputy Fish and Game Commissioner.** (Died March 5, 1920.)

Mr. Nesbitt was the son of Sheriff Nesbitt, who has been reelected many times in Monterey County. He was in the service less than three years, but during that time his devotion to his work made him a thoroughly efficient officer.

## TWENTY-SIXTH BIENNIAL REPORT.

The following review of the work of the Fish and Game Commission during the past biennial period shows that it has been one of constantly widening range in its activities, of increased results with respect to hatchery output and improvements, of higher scientific achievement by our Commercial Fisheries Department, and a closer enforcement of the fish and game laws by our patrol force.

With our increasing population, which includes a considerable alien element, and the almost universal use of the automobile, our responsibilities have been vastly increased.

Most of the alien class arrive here with but little regard for conservation laws, the result being that they are the chiefest offenders to engage the attention of our patrol force. The use of the automobile has given easy opportunity to hundreds of thousands to reach the habitat of fish and game at any hour of the day or night, which renders detection of violation much more difficult.

We believe there is no force of employees in any department of the state who have shown more loyalty and faithfulness to their respective tasks than can be found in the employees serving under this Commission, regardless of the department in which they are employed.

This Commission was fully and creditably represented in the great war. Happily every man who was privileged to go, returned safely and found his position open for him. Those who, from various causes, were unable to contribute their services to their country, bore heavy burdens uncomplainingly at home. This is the more remarkable when it is remembered that in all the industries and every transportation line compensation had been almost doubled. Our employees remained faithful to their work, with but an insignificant salary advance compared with the much greater cost of living. This Commission has therefore reason to feel proud of its loyal and devoted workers.

A special page is devoted to the list of those of our force who died in our service during the past two years.

Our Department of Fishculture has at its head Mr. W. H. Shebley, who has been identified with the fishcultural work of the California Fish and Game Commission for upwards of thirty years, and who is regarded as one of the ablest and most successful fishculturists in the United States. Combined with his practical judgment, Mr. Shebley unites the results of his many years of experience and study of the scientific side of all questions relating to fishculture, with special reference to salmon and trout propagation, and has furnished a report on the details of his work that is worthy of careful consideration.

During the past biennial period sixteen hatcheries and six egg-collecting stations have been in operation. From them a total of 34,000,000 trout fry have been reared and distributed—the greatest number in the history of the Commission in a like period. In addition to the trout distribution a total of approximately 29,000,000 Chinook salmon were reared and distributed in suitable places in the Sacramento, Eel and Klamath rivers.

The outstanding feature in the work of this department has been a greatly improved system of fish distribution, increase in the number of and expansion of our pond system, for rearing both trout and salmon, and the successful propagation and distribution of the golden trout, considered to be the most beautiful of the trouts of the world.

Special attention is called to the color plate of a Loch Leven trout, on our report cover. This hardy, gamey fish hails from the lakes of Scotland. He has found a most congenial habitat in all of the colder waters of this state, either stream or lake. There is no more valiant fighter in the trout family, nor one whose food qualities are superior. We have distributed upwards of four million Loch Leven fry in suitable waters during the past biennial period, and desire that our people become better acquainted with and more appreciative of his sterling qualities.

Practically all of our hatchery stations are now provided with Ford auto trucks, which are utilized in re-stocking streams in the vicinity of the hatcheries or in other points remote from rail facilities. By this method the fish can quickly be taken to the streams and properly planted by trained men. Crews on our fish-distribution cars have been increased in order that we may use trained men to accompany the larger consignments from the railroad station to the waters that are to be stocked, thereby assuring successful transportation and proper distribution of the young fish.

A handsome new hatchery building, with four times the capacity of the old one that has done duty for about thirty years, has been completed on Lake Tahoe near Tahoe City, and will be ready for next season's operations. It is located about one mile north of the old hatchery, where an abundant supply of water sufficient to maintain it at full capacity can be had during the entire hatching season. Some necessary work upon the grounds and ponds for fish displays and a superintendent's cottage will be built in the spring and summer of 1921.

Another entirely new hatchery site has been selected on the Kaweah River, in Tulare County. Plans for the building are under way, which, when completed, will be an important link in our chain of hatcheries, enabling us to stock waters on the western slope of the Sierras to

greater advantage than is possible from either the Mount Shasta or Mount Whitney hatcheries. This hatchery is expected to be in full operation for the forthcoming trout season. The water rights have been secured, the supply guaranteed, and it has been thoroughly tested by the successful operation for the past two seasons of an experimental hatchery under canvas.

Extensive repairs which had been neglected at the Mount Shasta and Fall Creek hatcheries, due to war conditions, are now under way. The coming season will find these hatcheries fully equipped in all respects.

#### **MOUNT WHITNEY HATCHERY.**

Improvement work has steadily gone on at the magnificent Mount Whitney hatchery in Inyo County. The grounds and approaches have been improved to match its general scheme.

Among the other five and one-half millions of trout hatched and distributed from the Mount Whitney Hatchery were 300,000 golden trout during the past season, which were distributed under the direct supervision of Commissioner Connell, into barren lakes and streams in the southern Sierras. The location and water supply of this hatchery have amply justified its selection as an ideal hatching and rearing place for the rare and dainty trout of our southern Sierra, found in no other part of the world, the golden trout.

#### **FISHWAYS AND SCREENS.**

Although the building of fishways has been retarded by the drought of the past three years, in spite of it, remarkable progress has been made. Surveys were made of 82 new fishways, practically all of which have been constructed, the most important of them being the one located on the American River, at the Folsom dam. The surveys, plans and the construction of these ladders have been made under the constant supervision of deputy A. E. Doney, who has specialized in this work for more than fifteen years.

Surveys and legal notices to install screens to prevent the loss of young fish through irrigation canals and power wheels, have been made, on 171 streams, ditches and canals, practically all of them now working efficiently. This important work is under the supervision of Mr. A. E. Culver as screen inspector. In most cases our requests have been met with ready compliance. In fact, there has never been a time in the history of the state when the conservation of our fish by installation of screens and fishways has been needed more, owing to the constantly increasing amount of water that is being diverted for agricultural and industrial purposes.

FIG. 2. The Mount Whitney Hatchery located at Independence, Inyo County, showing pond and hatchery grounds.  
Photographed by J. L. Von Blon.

### COMMERCIAL FISHERIES.

This department is under the immediate direction of Mr. N. B. Scofield, a trained scientist who has devoted twenty years to the service of the state in the study, development and control of the commercial food fish industries. He is assisted by a thoroughly organized and efficient office and patrol force, and also by a corps of able scientific investigators headed by Mr. W. F. Thompson. Highly important discoveries have been made and valuable papers furnished, all tending to make of this department one of the most important maintained in this class of work by any state or country.

Mr. Scofield's contribution to our report is a valuable document. We draw particular attention to that portion of it referring to the operations of the canneries along our coast, with special reference to the vexatious problems of fertilizer plants.

To assist in further development of this work and to preserve the valuable records and the statistical data already secured we have, with the approval of your Board of Control, set aside \$25,000 for the construction of a fisheries laboratory to be located at San Pedro, adjacent to the large fish canning establishments.

With commendable foresight the city of Los Angeles granted free of cost a splendid building site for a period of thirty years, with the privilege of renewal for a like period on the same terms. Plans are now being drawn and we hope that this valuable addition to our scientific work will soon be an accomplished fact and performing, under more favorable conditions, still greater work than has been accomplished in the past.

### MOUNTAIN LION BOUNTIES.

The increasing number of does and fawns that can be seen in a day's journey through the deer country, and which are being continually reported by hunters and those living in the mountains, is conclusive evidence of the wisdom of continuing to pay a bounty to encourage the killing of these marauders, who not only prey upon deer of all ages, but upon the farmers' livestock. He seems to have a fondness for colts, calves, sheep or goats. This has been confirmed many times although the presence of deer meat in the stomach contents strongly indicates his preference.

The Commission began to pay the bounty in November, 1908, and has to this time paid for the pelts and scalps of 3170 lions, all of which were sent to this office accompanied by the applicant's sworn statement showing where the animal was killed and by whom, and further supported by the signatures of two witnesses. In addition, the claim must be accompanied by an account of the pursuit and killing, together with

such other evidence as is acceptable to us to justify presenting the claim to the Board of Control for approval.

There was a steady decrease from year to year in the number of pelts received and claims presented, until a specially trained hunter was employed. The largest number taken in any one calendar year was 482 in 1908. For the calendar year 1918, 243 bounty claims were paid, and for the calendar year 1919, 214 were paid. It was decided in 1917 to increase the bounty to \$30 for the pelt of the female lion as a further inducement to those living in the mountain lion country to hunt them, as it requires trained dogs, as well as much patience and hard rough work, to locate and finally tree them.

As the game refuges increased in number and shooting not being permitted there, nor in the National Parks, the lions seemed to avail themselves of those shelters. The Commission in 1918 decided to adopt further measures and engaged the services of Mr. Jay C. Bruce, an experienced mountaineer and lion hunter, the possessor of highly trained dogs, to take up the work as a regular deputy and devote his time especially to the refuges and parks, but also to respond to the call from any section where lions were reported as doing damage.

The increased results have fully justified his employment, as in addition to the lions, he destroys all other predatory animals destructive to game.

A page showing the total number of lions killed to January 1, 1920, by counties, and for which the bounty has been paid, will be found in the appendix.

#### ARRESTS AND FINES.

The work of our patrol force is best shown by the official record of its accomplishments, which clearly indicates that the work has been thorough and far reaching; that it covers every class of offense relating to the fish and game laws, and that it has reached into every corner of the State. This statement is based upon the detailed history, shown in our book of arrests and fines, of each case made.

The number of arrests and amount of fines assessed upon offenders during the biennial period is the greatest in the history of the Commission, totaling 1891 arrests and \$49,426 in fines.

We do not claim that all violators of the fish and game laws have been apprehended. The opportunities afforded through the now general use of the automobile renders detection and capture more difficult. Our force is placed at the same disadvantage thereby as our city and county officers charged with the enforcement of other sections of the Penal Code, but we do confidently claim that no other body of officers, city, county or state, can show a cleaner record or a higher state of

efficiency. Their work is not measured by certain hours of the day or night, but at all hours, in any weather, stormy or sunny, on the water or in the field, or as conditions seem favorable to the law breaker.

We do recognize, however, a marked improvement in general public sentiment towards the enforcement of the fish and game laws. Convictions by juries are no longer the exception. The attitude of magistrates particularly in the interior of the state, is reflected by the imposition of deterrent penalties.

Another hopeful sign is the courtesy shown, and assistance extended, to our deputies throughout the state while in the discharge of their duties.

#### THE UNITED STATES FOREST SERVICE.

At this time, we desire to speak of the valuable assistance rendered by the men of the United States Forest Service. Supervisor and ranger alike have been of great assistance in this work. They have assisted our deputies to the limit when necessary and many important cases were unknown to us until the court records came in, showing that the arresting officers were members of the Forest Service. They have taken a conspicuous part in the arduous work of distributing young trout in remote waters.

They have also kept a watchful eye and reported on the conditions of the streams as related to fishways and screens. Their intelligent cooperation is deserving of your unqualified approval.

#### EDUCATION AND PUBLICITY.

We believe that nothing will develop public sentiment in favor of fish and game conservation more quickly and thoroughly than a properly conducted campaign of education and publicity. Your attention is invited to the report of our Bureau of Education, Publicity and Research, under the immediate supervision of Dr. H. C. Bryant. A perusal of this report will indicate how wide a field has been covered by this bureau in preaching the gospel of conservation. It has reached universities and colleges, normal schools, high schools, grammar schools, parents and teachers' associations, boy scout camps and other vacation camps and mountain resorts of the state. The lectures are accompanied by motion picture films of wild life showing the home life of game birds and mammals, and also one reel showing our hatchery operations.

In addition, this bureau is charged with the responsibility of editing and issuing our quarterly bulletin, "CALIFORNIA FISH AND GAME," which was first issued in October, 1914, and judging by the frequent letters of approval coming to this office, has steadily grown in public estimation.

It is becoming more and more apparent that the tremendous drain upon our trout streams, due to the facilities of approach by rail and especially by automobile, justifies us in urging that the trout season be shortened at least one month throughout every district, that the young fish planted each year may be given an opportunity to reach a sportsman's size and permit seed enough to remain to insure, if possible, reproduction of species.

We are also reminded by many sportsmen that owing to the unequal distribution of the deer in the state and the consequent stronger attack on those sections of the state where deer are still numerous, that the limit should be reduced to one buck per year. Whether such reduction shall be made at the forthcoming session of the Legislature is an open question, but there can be no doubt that it must soon come.

We would favor some slight changes in the existing deer law with respect to season, the evidence of which comes from those resident in the respective sections where deer are found and whose judgment and experience should, therefore, not be disregarded.

We receive suggestions of many sorts from different sections of the state proposing changes in the fish and game laws. Some are entirely of a selfish nature and would not treat with fairness, the neighboring localities. We desire to be fair to all.

It is our endeavor to conserve the supply of fish and game of this state for all of its people rather than to yield to the pressure of the few in one section to the detriment of those in adjoining sections.

We aim to cooperate with each county to the fullest extent and give careful consideration to their requests and to smooth out differences that are more apparent than real. We acknowledge our obligation to county officials of every class. Their support has been both cordial and helpful. In fact, we recognize a decided gain with respect to the general sentiment of the people regarding the observance of all conservation measures pertaining to fish and game.

#### ACKNOWLEDGMENTS.

To many departments of the state do we acknowledge our indebtedness for courteous assistance and cooperation.

To the officials and subordinates of the American Express Company, the Lake Tahoe Railway and Transportation Company, the San Francisco and Sacramento Railway, the Yosemite Valley Railroad Company, the Sacramento Northern Railroad Company, we extend our thanks for valuable assistance.

To the United States Bureau of Fisheries and assistants we acknowledge our appreciation for hearty cooperation and assistance in salmon culture.

To the United States Forest Service for its valuable aid in the enforcement of the fish and game laws and liberal cooperation in fish distribution.

We gratefully acknowledge our obligation to the University of California and to Leland Stanford Junior University for helpful assistance in investigations and in the solution of difficult problems.

And especially do we wish to express our appreciation to the thousands of sportsmen, hunters and anglers alike, who are the main stay of this organization in a financial sense, and who have by friendly advice and cooperation assisted in carrying on this great work to its present high standing among the Fish and Game Commissions of the United States.

## REPORT OF THE DEPARTMENT OF FISHCULTURE

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: We take pleasure in submitting for your consideration a report of the operations of your Department of Fishculture for the biennial period July 1, 1918, to June 30, 1920.

In previous reports submitted to your Honorable Board, this department has called attention to the growing demand for trout fry for stocking the streams and lakes of the state, due to the ever increasing number of anglers seeking recreation in every section where the sport of angling is possible.

With the advent of the automobile and the good roads movement, the way has been opened, for one so inclined, to go in a few hours with the greatest ease from the very heart of our most closely settled communities into the utmost recesses of our mountain fastnesses. And the city dwellers have gone in a never-ending procession, literally by the tens of thousands, from the opening day in the spring to the closing of the fishing season on the approach of winter.

Sections of the state, in the most remote recesses of the high Sierras, which but a few years ago could be reached only by pack trains with the assistance of hardy mountain guides and days and often weeks of travel, are now reached in but a few hours from the main centers of population, by automobiles, over some of the finest highways in the world. There can be but one result from such a condition of affairs and that is the practical destruction of fishing in the majority of the waters of the state, unless the most stupendous efforts are put forth, and at once, to conserve our game fishery resources and to increase the extent of the operations of this department. Every effort has been made within the past four years to keep pace with the demands of the situation, but war and post-war conditions have seriously handicapped us in accomplishing our objective. During the war period it was impossible to attempt any construction and improvement work on account of scarcity of labor and materials, therefore, it was not until the spring of 1919 that we were enabled to proceed with our plans for constructing

new hatcheries and egg collecting stations and enlarging and modernizing our older plants, properly fitting them with egg collecting equipment and providing suitable quarters and accommodations for the men engaged in carrying on the work. We now feel that we are equipped to handle the situation in the future to far better advantage than we have been able to during the past two years.

There are now in operation sixteen hatcheries, the majority of which are also equipped to carry on egg collecting operations, and in addition thereto, six egg collecting stations. With this equipment we are confident that we will be able to keep pace with the demands for trout fry.

A vast improvement has been made in our system of fish distribution from the various hatcheries and with the fish distributing cars. The more important of our hatcheries are now provided with small auto trucks, which in addition to being of great assistance in carrying on all regular operations, are used very extensively in connection with distributing the fry in the localities in which the stations are located. The fish are taken out during the proper season, a few cans at a time, and are carefully planted by our own men, who are skilled in this line of work. Local sportsmen and prominent citizens of the various communities are cooperating in stocking the streams, to a greater extent than in previous years, for the people generally are coming to realize the importance of maintaining the fish in their streams as an attraction to lure the people into the healthful recreations of the wilds.

The crews on our fish distribution cars have been increased to permit our messengers to accompany as many as possible of the larger consignments of fish from the point of delivery to the streams, where the transportation and planting of the fish is at all difficult, and when the applicants are inexperienced in fish planting. Many of them are experienced in the work and no assistance from this department in the actual planting work is necessary. Many of the deputy fish and game wardens are also cooperating with the department and the applicants, as are also a great many of the United States Forest Service Rangers who have had experience in planting fish. The result, of this policy, and new system of trout distribution, is that a far greater proportion of the fish survive. Then too, with the better methods of planting and the ever increasing number of experienced men engaged in the work, the fish are better "scattered" and receive a much wider distribution than formerly.

#### TROUT.

For the biennial period, a total of 34,000,000 trout fry were reared and distributed in the waters of California. This is the greatest number of trout fry ever distributed by the Commission in a like period.

Although much has been accomplished in the distribution of trout fry, it is impossible to keep the streams in the more easily accessible

regions stocked to the satisfaction of the majority of the anglers, as the open season is too long. The trout fry do not have a chance to grow. Fry planted during the summer and early fall are caught the next spring, when they are not over four or five inches in length. The growing season in the Sierra Nevada range—where the great majority of the stocking streams and lakes are situated—is during the spring, summer and fall. Trout do not make much of a growth during the cold stormy weather of midwinter. To give the trout fry a chance to grow and the adult fish to propagate, the season should be shortened at least

FIG. 3. Sisson Lake, one of the three large salmon rearing ponds at the Mount Shasta Hatchery. Photograph by Homer Marston.

one month in the spring and one month in the fall. Five months out of the year should be ample time for the anglers to enjoy the privilege of taking trout.

There are streams in the Sierra Nevada Mountains in which there are very few breeding or adult fish left. The anglers fish some of the easily accessible streams until the only fish left in any great numbers are the fry that have been planted the season before. They cannot take all of the large fish out of a stream and expect to have good fishing. If the open season on trout is shortened to five months, the results will be apparent in several ways. The number of fish taken will be reduced. The fry will have a chance to grow during the spring and fall when there is an abundance of natural food, and the adult fish will be protected during the breeding season. The rainbow, black-spotted and steelhead species spawn in the spring, and the Eastern brook, Loch Leven and German brown trout, in the fall. Thus there

will be an increase of natural propagation, and the fry from the natural propagation, as well as from the hatcheries, will have a chance to live and grow to a larger size. And the anglers will have in turn a better sized fish to catch.

#### CHINOOK SALMON.

The propagation of Chinook salmon has engaged the attention of this department as in former years, and while no radical change in method or policy has been made, there has been a steady improvement in the work. The policy of holding and feeding a large number of salmon fry in the big salmon rearing ponds at the Mount Shasta

FIG. 4. Eel River, at the mouth of Fort Seward Creek, showing the extremely low water level on February 23, 1920—the lowest on record. Low water prevents the fish from reaching their spawning grounds. Photograph by M. K. Spaulding.

Hatchery throughout the summer months, and releasing them during the fall when conditions are propitious for their journey to the sea, has been strictly adhered to.

The major portion of our Chinook salmon eggs has, as in years past, been received from the United States Bureau of Fisheries' stations at Mill Creek and Battle Creek, tributaries of the Sacramento River.

All rights to the use of their old station at Klamathon on the Klamath River, in Siskiyou County, were secured from the Bureau of Fisheries and this hatchery has been operated for the past two years. The first season we were not properly prepared to conduct operations and only

a small number of eggs were taken. Last fall a fine take of eggs was procured and the number received would have been much greater had it not been for the drought, which extended all over the state and materially interfered with the extent of our egg collecting operations. A portion of the salmon eggs taken at Klamathon Hatchery are hatched and the fry reared at the new Fall Creek Hatchery. Here a large number of the fry are held in ponds during the summer and released in the Klamath river as fingerlings during the fall months.

A total of approximately 29,000,000 Chinook salmon were reared and distributed in the Sacramento, Eel and Klamath rivers during 1918-1919.

We desire to call particular attention to the salmon run in the Sacramento river. It is threatened with extermination if measures are not taken in the immediate future to increase the pond rearing system on the Sacramento River. Fully 80 per cent of the natural spawning grounds of the Sacramento River basin have been destroyed by the mines, and dams constructed for the purpose of generating electricity, and by the diverting of water for irrigation purposes.

The salmon rearing ponds at the Mount Shasta Hatchery will soon be inadequate to keep up the supply, and if the Iron Canyon Project is completed, according to the plan of the promoters, all of the salmon fry will have to be hatched and reared below Red Bluff.

The run has been broken at Redding by the construction of the dam diverting the water into the canal of the Anderson-Cottonwood Irrigation District. At the time the dam was built during 1916-1917, we had an understanding with the engineer in charge of the District, that the dam was not to be raised above a certain level. This would allow all the salmon to pass the dam and proceed on their way up the McCloud and Pit rivers. This would allow natural propagation in the Pit River and the Bureau of Fisheries could collect the eggs from the salmon that entered the McCloud River at Baird Hatchery and hatch and rear them as in former years.

In spite of the heavy drain on the fish in Monterey Bay and elsewhere in the ocean and in the Sacramento River, the salmon culture operations, as carried on by the Bureau of Fisheries and the State Fish and Game Commission, kept the run of salmon up without an appreciable decrease until the last two or three years. But recently the large number of salmon taken in Monterey Bay, the fishing areas off the coast of Fort Bragg, and the fishing in the lower river, combined with the number speared during the so called closed season on the upper reaches of the river, have made a material reduction in the number of adult salmon and effective measures must be taken without delay to save the salmon that are the output of the Sacramento River system. The low water in the river caused by the diversion of the water to the rice fields,

and its contaminated condition, has a tendency to prevent the salmon from passing up the river. The water that returns from the rice fields is full of organic matter and the gases formed by the decomposition is deleterious to all fish life. In our opinion a careful study of this condition should be made next season with the object of determining the actual facts.

We respectfully recommend that the Legislature stop all market fishing for salmon above the City of Sacramento and make a closed season off the coast of Fort Bragg and in Monterey Bay so that at least one-third less salmon can be taken during the season along our coast. The dates for the closed season on the Sacramento River and in Monterey Bay, and along the the coast where the salmon fishing grounds are located, should be arranged from data collected by the Department of Commercial Fisheries and the Department of Fishculture, so that the best results may be obtained. Further experiments should be carried on, at the Chico Experimental Station where the Fish and Game Commission has procured a lease from the City of Chico on Big Chico Creek in the Bidwell Park. These experiments should include the rearing of salmon fry in ponds, so that if the Iron Canyon Project is completed, the Commission will be in a position to save the salmon of the Sacramento River by a pond rearing system.

The installation of the dams in Pit River by the Pacific Gas and Electric Company to generate hydro-electric power will destroy that stream as a natural breeding ground for salmon. If work is begun on the Iron Canyon Project in the next year, the power company should be forced to erect a salmon hatchery and rearing ponds on Pit River to propagate the salmon that their project will destroy. This should be taken up at an early date and every effort made to save the salmon.

The last of the salmon breeding grounds on the San Joaquin will be destroyed this season by the completion of the Kerckhoff dam and powerhouse by the San Joaquin Light and Power Company. The water will be diverted through a tunnel 17,000 feet in length that will dry up about 12 miles of the river bed as well as prevent any salmon from ascending above the dam. A survey of conditions on the San Joaquin River has been made and an estimate of the number of breeding salmon that pass the Mendota Weir, about 50 miles below the Kerckhoff dam, is in preparation. A survey has been made for a fishway over the new Mendota Weir that is now under construction. This will allow the spring run of salmon to pass on up the San Joaquin River to a point where the large irrigation canals take the water out of the river. These salmon ascend the river during May, June and the first part of July. In the foot hills near Friants they congregate in the large pools and remain until such time in the fall as the temperature is right for them to spawn, then they ascend the river into the gorge of the San Joaquin

River where they spawn during the fall. This is the result of our observations and data gathered from the residents and deputies who have lived in that vicinity for years. If such proves to be the facts, the only way to save the remainder of this run of fish is to establish an egg collecting station near the Kerckhoff powerhouse, collect the eggs, and transfer them by truck to Powerhouse No. 1, a distance of about seven miles, and there hatch and rear the fry in ponds. The fry should then be held until the following spring, or it may be necessary to hold them in the ponds for 16 months, until the following spring after they are hatched, and then release them in the river during flood periods before the large canals are opened for the season's operations.

If the water is turned in the large canals before the fry are ready to be released or the water is not turned off from the large canals during the winter and early spring, the fry would have to be transported by truck down the river to where they could be distributed below the canal systems. All this work should be forced on the power companies. They construct impassable obstructions in our rivers and streams in the shape of dams and diverting tunnels and canals without regard to the enormous destruction of the runs of commercial fishes. The Legislature should enact laws at once, compelling the power and irrigation companies to erect hatcheries and pond rearing systems, when in the judgment of the Fish and Game Commission it is deemed necessary to do so, and to furnish the funds to the state for the maintenance of these hatcheries.

There has been no effort on the part of some of the power companies and irrigation districts to repair any of the damage that they are doing in destroying a valuable source of food supply for the people. While they are developing properties that are essential to the development and growth of the state, they should at least be compelled to maintain the run of commercial fishes that they destroy in so doing, when it can be done easily and at a nominal cost.

Some of the corporations have cooperated with us to the very fullest extent possible in this work, but others have consistently opposed or evaded our efforts to conserve our commercial fishes.

The commercial fish interests should wake up to the fact that their valuable business is being destroyed to create another industry, and everyone should assist the Fish and Game Commission in saving this important food supply before it is too late.

#### **MOUNT SHASTA HATCHERY.**

During the biennial period there were distributed from the Mount Shasta Hatchery a total of 14,948,000 trout fry. A small portion of these fish were distributed in local streams from the hatchery, but the

greater number of them were shipped away in the two fish distribution cars to other sections of the state.

While the department is operating a total of twenty-two hatcheries and egg collecting stations in various sections of the state, the greater portion of the streams are stocked with trout fry from the Mount Shasta Hatchery. It is at this station that the entire supply of brood stock is held in artificial ponds, which furnishes all of the Eastern brook, Loch Leven and Brown trout fry. A small stock of rainbow breeders is also carried at this hatchery. Under this system there is assured a never failing supply of trout fry, no matter to what extent adverse climatic conditions may affect the collecting of eggs from the wild fish in the streams and lakes on which our egg collecting stations are located. Especially during the past two seasons when our take of eggs from the wild trout fell far below normal, on account of the extreme drought it has been a source of gratification to this department to know that the breeding stock in the Mount Shasta Hatchery ponds could be relied upon to furnish at least a fair number of fry, all of desirable species, for keeping our streams stocked.

We believe that the general public does not sufficiently appreciate our accomplishments in this line of work. Even the applicants, with whom we are more closely in touch, are so accustomed to having their requests for thousands and tens of thousands of trout fry met annually, and substantially as requested, that they little realize all the work and planning it takes to produce the fish.

Mount Shasta Hatchery was established in 1888. The equipment consisted of a single building 40 feet by 60 feet with a capacity of 44 hatching troughs. The output of fish during the first few years was but a few hundred thousand fry annually. Today the station covers seventeen acres of land, practically every foot of which is utilized. There are five large hatchery buildings located on the site with a combined capacity of 450 hatching troughs, capable of handling at least 10,000,000 trout fry annually. Other buildings consist of a superintendent's residence, cottages for the foreman and assistants, barn, sheds, garage, spawning house and kitchen for the preparation of the fish food. There are 50 large rearing ponds, where the breeding fish are retained, nurseries for the young fish, etc. In addition to this equipment the Commission has leased outside the grounds, but within a radius of a quarter of a mile of the plant, three large ponds which are used for rearing salmon fry. The capacity of these ponds is 3,000,000 fry. A one and a half-ton truck is used for hauling materials and supplies from the town of Sisson, which is one mile distant, and for hauling fish and eggs to and from the trains.

During the past year a great deal of repair and improvement work has been undertaken, the most important accomplished being the installation of new hatching troughs in "Hatchery A." The entire station is in first class shape.

By far the greater portion of the salmon cultural operations of the department are carried on at Mount Shasta Hatchery. During the biennial period a total of 23,363,000 Chinook salmon were reared and distributed from Mount Shasta Hatchery. Of this number a little over 16,000,000 have been distributed in the upper reaches of the Sacramento and Klamath rivers during the spring and early part of the summer, and the balance of over 7,000,000 have been reared in the three salmon rearing ponds above referred to through the summer months. The fry have an abundance of natural food in these lakes and an unlimited flow of pure, cold, mountain water. They are also fed on artificially prepared foods.

The conditions under which the fry are reared are ideal and when the season is favorable for their release into the streams after the first fall rains, they are in most excellent condition for their long journey to the sea.

Located as it is at an altitude of 3500 feet above sea level on the southern slope of Mount Shasta and in the heart of Strawberry Valley, with a wonderful supply of pure cold water, as well as being within a mile of the main line of the Southern Pacific Railroad, which is but a couple of hours by rail from the rainbow trout egg collecting stations on the Klamath River, Mount Shasta Hatchery is ideally situated. It has a capacity for handling not only the bulk of trout fry which can be transported to practically every section of the state at a comparatively moderate cost with a minimum loss of fish, but is capable of also rearing a sufficient number of salmon fry to maintain the salmon run in the Sacramento River.

#### KLAMATHON HATCHERY.

In order that the run of Chinook salmon in the Klamath River might be properly maintained, it was deemed essential that the department increase the extent of its operations with reference to this locality.

For many years past the Klamath River has been stocked each season with Chinook salmon fry, the supply being principally obtained from eggs taken from the Sacramento River. The United States Bureau of Fisheries had operated the egg collecting station at Klamathon and the eggs here taken were mostly shipped to Sisson, where they were hatched, reared, shipped back and planted in the Klamath River. The Bureau also hatched some fry at Klamathon and these fry were planted early

in the spring. However, the station was not well equipped for general operations and the water supply was poor and uncertain and consequently the extent of the operations was limited and the results obtained far from adequate. After careful deliberation, it was decided that some radical changes in the method of stocking the Klamath River must be undertaken. The matter was taken up with the Bureau of Fisheries and they very kindly agreed to turn the station over to us and donated the use of most of their equipment, buildings, etc.

In our report of 1918, mention was made of the provisions of the law requiring the owners of dams to erect hatcheries in lieu of fishways; when in the judgment of the Fish and Game Commission the dams are too high for the successful operation of a fishway or for other reasons it is deemed best to establish hatcheries below the dams for the propagation of any species of fish that may be obstructed in their movements by the dams. In accordance with the provisions of this act, arrangements were made with the California-Oregon Power Company to erect a good hatchery and cottages for the help at Fall Creek, and to establish racks and an egg collecting station at Klamathon for the purpose of collecting salmon eggs from the salmon that could not reach the spawning grounds on the upper reaches of the river, because of the high dam constructed by the California-Oregon Power Company.

The racks at Klamathon are well constructed. The plans for the racks and buildings were furnished by the Department of Fishculture and our employees had the supervision of the work. The egg collecting station at Klamathon and the Fall Creek Hatchery were built by the power company at an expense of over \$20,000.

Construction of the racks was begun during the fall of 1918, and was finished in time to secure a small number of salmon eggs. Under our plan of operation it was decided to take the eggs at Klamathon Station and ship them to the new Fall Creek Hatchery, which was under construction at the same time, where they would be hatched, reared and planted in the Klamath River and tributaries. Nearly a million Chinook salmon eggs were secured during the fall of 1918. Early in September, 1919, a crew was put to work at Klamathon Hatchery and everything was put in excellent shape for the season's operations. The season proved to be very unfavorable for egg collecting operations. The fall rains came unusually late in the season and were insufficient to raise the Klamath River to levels necessary for a good run of fish. However, we were fairly successful and secured 5,000,000 eggs before the run was finally over. Should next season be favorable for salmon egg collecting operations, double this number will undoubtedly be secured.

### FALL CREEK HATCHERY.

As above mentioned, the Fall Creek Hatchery was constructed and paid for by the California-Oregon Power Company in lieu of constructing a fish ladder over their dam at Copco in the Klamath River.

A site on Fall Creek, a tributary of the Klamath River, at a distance of sixteen miles from the town of Hornbrook and along the line of the old Klamath River railroad was selected. A substantially constructed hatchery building, with a capacity of one hundred hatching troughs, a cottage for the foreman and living quarters for assistants comprise the equipment. The hatchery, completely equipped for fish-cultural operations and with a capacity sufficient to adequately take care of requirements in that section, was completed and ready for operation in the spring of 1919. The Chinook salmon eggs, taken at the Klamathon Hatchery during the previous fall, were hatched here and the fry reared for distribution in the Klamath River and tributaries during the spring and summer of 1919.

Five hundred thousand Chinook salmon fry were planted during the early spring months and a large pond was constructed in which were held and reared, to the fingerling stage, 648,000 fry. They were released in the stream during the months of October and November. In addition to handling the salmon work during the season of 1919, 670,000 rainbow trout eggs were received from the Bogus Creek Station that spring and were reared and planted in the Klamath River, above and below the dam and in tributary streams, during that summer. A large portion of the rainbow trout eggs taken at the Bogus Creek Station are immediately transferred to the Fall Creek Hatchery, where they are "eyed" and later all surplus eggs over and above the amount required for stocking the Klamath River are shipped to other stations to be hatched and reared for general distribution.

### BOGUS CREEK STATION.

For a number of years rainbow trout egg collecting operations have been carried on in the Klamath River section by trapping the spawning fish as they ascend Bogus Creek and Camp Creek. The racks, traps and holding tanks in both of these creeks were in a very poor state of repair and accordingly, during the fall of 1919, the old egg collecting plant was removed and new equipment installed.

Spawning operations at these two creeks are carried on by the same crew, as they are but a short distance apart, Bogus Creek being on one side of the Klamath River and Camp Creek a short distance above on the opposite side of the stream. Accordingly, the two camps are operated under the name of Bogus Creek Station.

In the spring of 1918, 2,000,000 rainbow trout eggs were collected from this station and in 1919, 2,500,000 were taken. During the spring

of 1920, we procured over 2,600,000 eggs from this station, despite the extreme drought and unfavorable weather conditions, which obtained throughout the state. The success of our operations at this station this season was due to the installation of the new equipment. The eggs were shipped to Fall Creek Hatchery and to Mount Shasta Hatchery, where they were "eyed" and reared for distribution throughout different sections of the state.

#### **HORN BROOK STATION.**

Hornbrook Station, which is located on Cottonwood Creek, near the town of Hornbrook, Siskiyou County, produced 715,000 rainbow trout eggs in the spring of 1919 and this number could have been materially increased had the racks been placed in the stream lower down and had we been better equipped for egg collecting operations.

A careful investigation of Cottonwood Creek with reference to the collecting of rainbow trout eggs was made during the spring and early summer of 1919. A lease for a new site was obtained from Mr. Marshall Horn and a permanent system of racks was installed therein to trap the spawning trout as they ascend the stream. A new and larger holding tank for the fish was also installed and with the new equipment it was possible to obtain 1,600,000 trout eggs in the spring of 1920. These eggs were shipped, as soon as taken, to the Mount Shasta Hatchery.

#### **MOUNT WHITNEY HATCHERY.**

The Mount Whitney Hatchery, which is located near the town of Independence, Inyo County, and which was completed in the spring of 1917, has been operated each season to better advantage. This hatchery has the most extensive and complete equipment of any of our stations and the results obtained, especially during the past two years, have demonstrated the success of the hatchery. The trout fry produced at this hatchery are larger and more vigorous than those of any other hatchery. This condition is due to the wonderful supply of pure, cold water with which the hatchery is supplied from Oak Creek, and to the fact that the fishcultural equipment is superior to that of any other station. While it is true that the station is located at a considerable distance from some of the Southern California and San Joaquin Valley sections, which receive their supply of trout therefrom, the transportation facilities are very good, the trains being run on schedules which permit of the fish being delivered to the applicants within but a very short time of their leaving the hatchery. Consequently, the fry are in the very best possible condition when planted in the streams. While it may appear, to one not familiar with the existing conditions, that the distribution of the fish from Mount Whitney Hatchery is more

expensive than from other stations, on account of the high rate of fares from Mojave to Owenyo, the very reverse is true; for the trips of our distribution car are all comparatively short ones and we are enabled to complete the distribution work within a short time, which materially lessens the cost of distribution. But the most important feature of the advantage to Southern California of this hatchery is the excellence of the fry produced. They are truly wonderful fish and the advantage to the southern waters of our planting such fry is really inestimable.

During the biennial period, we distributed a total of nearly 5,000,000 trout fry from Mount Whitney Hatchery. The most interesting work undertaken at this station during the two years, from a fish cultural standpoint, has been the propagation of golden trout, obtained from the Cottonwood Lakes Station. The propagation of this species is very difficult owing to the weakness of the embryos. The eggs are fertilized with but an ordinary loss, but the embryos hatched seem to lack vitality and it is only by exercising the greatest care and patience in handling the eggs during incubation and in caring for the embryos, that the fry survive at all. However, golden trout are being successfully reared, and some very excellent results are expected from the stocking of the streams and lakes of the southern high Sierra, in which section conditions are propitious for the successful development of this species.

Owing to the failure to collect the usual number of eggs this spring, we were not able to carry out the plans of stocking all the barren lakes and streams of this region this season, but plans are being made to carry on the work next season. A well equipped pack train in charge of an experienced fish planter will be placed in charge of the work. This is an important work as it will stock the barren waters in advance of the army of anglers that each season advance farther into our mountain regions in search of sport and recreation.

The work of improving the grounds around the hatchery has been continued and the gardens are beginning to show the results. A large pond has been constructed, in which there are a number of adult trout of different species. Surrounding the pond are extensive lawns and beautiful flower gardens, roadways, paths, etc. The shrubs and trees set out a year ago last spring are thriving exceptionally well, and the time is not far distant when the Mount Whitney grounds will take rank with some of the finest garden spots of the state.

#### COTTONWOOD LAKES STATION.

As above stated, the propagation of golden trout fry for the stocking of streams and lakes of the southern high Sierra, has engaged the attention of the Department for the past two years. The eggs of this variety are obtained by trapping the spawners as they ascend the

streams flowing into Cottonwood Lakes. These operations are carried on under extreme difficulties. The fish commence "running" as soon as the ice on the lakes commences to break up in the spring, which is generally during the middle of June. The remoteness of the site of operations from railroads, highways or, indeed, any human habitations, the high altitude, and prevalence of snow storms, make the trip into this remote section at this season of the year actually dangerous at times. Nevertheless the work has been continued and crews have gone into the "lakes" each season and successfully accomplished their mission. Five hundred thousand eggs were taken in the spring of 1918, and in 1919, nearly a million eggs were procured. Immediately after each spawning pack trains were started out to take the eggs to the Mount Whitney Hatchery where they were hatched and reared. The Cottonwood Lakes Station is being opened up again this season and about three quarters of a million eggs will be taken, if conditions are favorable.

FIG. 5. On the way to the Rae Lakes Egg-collecting Station, on June 7, 1920. It takes ingenuity and hard work to reach some of the spawning stations. Photograph by G. McCloud Jr.

#### RAE LAKES STATION.

The Rae Lakes Station was established during the late spring of 1917 and operated that season. At the site of operations the altitude is 10,500 feet above sea level. It is a beautiful chain of lakes set in the heart of the high southern Sierra in Fresno County, and is well stocked with rainbow trout. To reach the site in time to trap the fish as they enter the streams to spawn is extremely difficult. The trip into the lakes must be made via Oak Creek pass at an elevation of over 11,000 feet. There are few trails and one must make the trip through the blind mountain

FIG. 6. Shoveling snow to release a pack animal on the Rae Lake trail, June 9, 1920. Crossing the Sierras in summer is not always an easy thing. Photograph by G. McCloud Jr.

passes over great depths of snow. Severe snow storms in this section, even in June when the fish are spawning, are frequent. Even when the days are clear and warm, the nights are freezing cold and the journey through the passes is at best a difficult one, taxing the strength

FIG. 7. Spawning rainbow trout at the Rae Lakes Egg-collecting Station.

and resourcefulness of the hardest mountaineers. Owing to the difficulties attending the opening up and operation of this station, and to the fact that sufficient skilled help to operate all of our hatcheries to capacity could not be obtained, this station was not utilized during 1918 and 1919.

On account of the extreme drought obtaining throughout the entire state during the winter and spring of 1920, which materially reduced our take of trout eggs, it was decided that every effort should be made to take at least a half million rainbow eggs at the Rae Lakes Station in

FIG. 8. Cabin at the Rae Lakes Egg-collecting Station as it appeared at the end of June, 1920. Photograph by L. J. Stinnett.

order that Mount Whitney Hatchery might be supplied with an ample number of trout eggs to stock the streams and lakes of southern California. Some rainbow and a few steelhead eggs had been shipped to Mount Whitney Hatchery from some of the northern stations, but the hatchery was still half a million eggs short of requirements.

Accordingly, on June 7, our crew left Mount Whitney Hatchery for the Rae Lakes district. The Oak Creek trail was in very bad shape, rocks and slides having made it very rough. The snow banks were very deep and the snow soft, making it extremely difficult to get the pack animals through in places. Several times the men had to shovel out paths for the horses. The party was four days in making the trip, but fortunately they got in ahead of the run. The ice on the lakes was just

commencing to break up and it was several days before the fish began to run into the creeks to spawn. In the meantime, the crew had ample opportunity to install the racks, traps and holding pens.

The run of fish was very heavy but being of small size they produced only an average of 250 eggs each. Approximately 500,000 eggs were taken, about what we expected to obtain. The eggs were brought down to the Mount Whitney Hatchery immediately after being taken.

#### LAKE TAHOE HATCHERY.

The Tahoe Hatchery, located on the shores of Lake Tahoe, one mile from the town of Tahoe, was established in 1889. The water supply is furnished from springs rising on the land used as a hatchery site. Thirteen acres were purchased at the time the hatchery was constructed, so as to secure all the available water to be had near the site. The water is pure and very good for the purpose of rearing fish, but the supply, ten miners inches, is not sufficient for a hatchery of the size necessary to supply the Tahoe basin outside of the territory supplied from the Mount Tallac Hatchery.

During the fall of 1917, this Department began a survey of all the available and suitable streams flowing into Lake Tahoe and after a careful examination we selected the Walker Springs, one mile north from the present site, on the state highway. The Walker Springs run during the minimum flow is 30 inches of water and during the maximum flow is a couple of hundred inches, and this during the season of greatest hatchery activity. Therefore the state has secured a most desirable site to carry on hatchery work. It is the only suitable water for hatchery purposes in the Tahoe basin proper. The streams that have their sources in the mountain range surrounding Lake Tahoe carry too much detritus and are too roily during the time the snow is melting. After purchasing the property, plans were made by the state architect for a modern stone hatchery with four times the capacity of the old hatchery. The contract was given to Mr. Matt Green during the summer of 1919. Work was begun on the new hatchery that fall and will be completed this summer (1920). At the request of Governor Stephens and the citizens of Placer County, the old hatchery grounds were converted into a public camping ground by an act of the Legislature during 1918, and the management of this public park was placed with the Fish and Game Commission, who have improved and maintained it from the funds collected from hunting and angling licenses. The old hatchery at Tahoe is being used until such time as the new hatchery shall be completed.

During the past two years there were hatched and reared 857,000 rainbow and black-spotted trout fry at the Lake Tahoe Hatchery and

these were given a wide distribution in the streams tributary to Lake Tahoe.

The new hatchery will have a capacity of 3,000,000 fry up to the swimming stage. Then the surplus fry can be placed in nursery ponds until such time as they can be distributed. The work of fencing the grounds, building roads, cottages for the superintendent and the help, and a small building for the preparation of the fish food, will be carried on during the coming fall and spring.

An endeavor has been made to add a new variety of game fish to the native species of trout in Lake Tahoe, by the introduction of the renowned golden trout of the Mount Whitney region. Last summer a consignment of 250,000 golden trout eggs were shipped from the Mount Whitney Hatchery to the Lake Tahoe Hatchery. The resulting fry were carefully reared and planted in the streams flowing into the lake, where conditions appeared to be most favorable for them. If the golden trout thrive in the waters of Lake Tahoe, it will mean much to the anglers of the state, who enjoy the fishing in this region.

#### MOUNT TALLAC HATCHERY.

The Tallac Hatchery has been operated for the past two seasons as formerly. Some changes have been made in the building to improve the light and water supply. During the last three seasons of drought, the water supply at Tallac Hatchery was effected as in other parts of the state.

Since the construction, by the Tallac Hotel management some years ago, of a dam at the outlet of Fallen Leaf Lake, which holds back the water that enters the lake from Glenn Alpine Creek, the principal feeder of Fallen Leaf Lake, the water in Taylor Creek, the stream that is the outlet of Fallen Leaf Lake, has been very low. Owing to the light rainfall in the autumn, and the unusually light fall of snow and rain during the winter months, the water that has entered the lake, during the last three winters, has been held back by the dam at the outlet of the lake. Consequently, the flow of water in Taylor Creek has not been great enough to attract the spawning fish to its mouth, where it pours its waters into Lake Tahoe, and where our egg-collection station is located.

As a result of the conditions, the take of black-spotted trout eggs was considerably less than in other seasons of normal rain and snowfall. The Tallac egg collecting station at the mouth of Taylor Creek has been one of the best egg collecting stations in the state. From three to five million eggs have been collected annually from this station for the last fifteen years.

While there are fifteen other streams entering Lake Tahoe on the California side of the lake where the trout have a chance to spawn

naturally, a greater number entered Taylor Creek than any other stream flowing into the lake, and our supply of black-spotted trout eggs has been secured from this creek almost exclusively for the last twenty-five years. This fact alone is positive proof of the beneficial results of artificial propagation, as no more than 5 per cent of the eggs collected annually from Taylor Creek are returned to it as fry, after being reared at the Tallac Hatchery. The remainder of the fry are distributed in other streams entering the lake and throughout the Truckee and Tahoe basins. The number of trout entering this stream was undiminished during twenty years of our egg collecting operations until the water was held back during the last two unusually dry winters by the dam at the outlet of Fallen Leaf Lake.

What the effect will be later on when the seasonal storms are normal again cannot be foretold, but it is probable that we will have to restock this stream heavily for a couple of seasons to restore the run that has been depleted by storage of the water in Fallen Leaf Lake.

We are planning to collect eggs from the Upper Truckee River, that has its source in the water shed of the mountain range to the south of the lake and empties into the head of Lake Tahoe, about two and one-half miles from the mouth of Taylor Creek. This is a larger stream than Taylor Creek and should produce as many eggs as it has, if the run has not been depleted during the years that the market fisherman and others were carrying on their illegal fishing.

The new hatchery at Tahoe City will require a larger number of eggs, as its capacity is four times as great as that of the old station which will be abandoned this season. Therefore our efforts to collect eggs from some of the other streams flowing into the lake will have to be increased. We have introduced rainbow and steelhead trout into Lake Tahoe in considerable numbers during the past two years, and in a few years these desirable species should increase in numbers great enough to give an added attraction to the already remarkably good fishing to be had in Lake Tahoe. The introduction of new species into the lake should improve the fishing conditions, as each new variety has different habits from the others. It often happens that in a lake as large as Tahoe the native species will not take the bait or lure offered them during certain periods in the summer, as the temperature and winds have caused the plankton to descend to greater depths than is practicable to take game fish. The native trout during these periods follow the minnows that are feeding on plankton. Consequently they are too deep to reach with ordinary tackle and, if they are reached, have no inclination to bite freely as their natural food supply is concentrated where they can easily obtain all the food that they require without much effort.

New species of fish introduced will have a tendency to feed nearer the surface and the anglers will enjoy better fishing. The introduction of rainbow and steelhead trout should be kept up for a number of years in as large numbers as possible, as it takes a long time to stock a body of water as large as Lake Tahoe with a new species.

In 1918, there were hatched and reared at Mount Tallac Hatchery, 149,000 rainbow, 1,133,000 black-spotted and 335,000 steelhead trout fry, and 1919, 51,000 rainbow, 685,000 black-spotted and 185,000 steelhead fry were distributed in Lake Tahoe and other waters of that section.

The steelhead trout have made such a remarkable growth, and produced such a fine, gamey, fighting fish when planted in inland lakes of the high Sierra that it was deemed essential that an effort be made to introduce this species in the waters of Lake Tahoe, hence a shipment of steelhead trout eggs is being sent to Mount Tallac Hatchery each season and the fry are planted in the most favorable locations.

#### FORT SEWARD HATCHERY.

The hatchery established in 1916 on Fort Seward Creek, Humboldt County, has more than filled our expectations, the fry produced at this hatchery being the best reared in any of the hatcheries located in the Coast counties.

The hatchery building is situated near the creek in a steep-walled canyon and the superintendent's dwelling on an eminence overlooking the hatchery. As our funds were limited at the time the hatchery was established, only a poorly constructed cabin could be built for the help besides the cottage for the superintendent. During the fall of 1919, two four-room cottages, of plain interior finish and shingle outside, were built so that men with families could be employed. It is a difficult matter to find competent help that will stay for any length of time in an isolated place such as this, sixty miles south of Eureka on the main line of the Northwestern Pacific Railroad and five miles from the post office and store at Fort Seward, unless every comfort is provided.

The water in Fort Seward Creek is the only water suitable for hatchery purposes on the line of the Northwestern Pacific Railroad. There are several streams between South Fork station and Fortuna, but they all have their sources in the same sedimentary formation as Price Creek, where we were compelled to abandon the hatchery owing to the great amount of sediment carried in the water during the winter and spring when the rainy season was at its height.

We have endeavored to find a location from which an ample supply of salmon and steelhead eggs could be collected for this hatchery, so that Eel River may not be depleted of the valuable run of salmon and

steelhead to be found in that river and its tributaries. Investigations have been made for rack and trap sites in the lower reaches of the river, but none have been found that can be operated for any sum of money that is available for such purposes from the present income of the Commission. The river is so wide and deep and subject to such tremendous floods that it is impracticable to attempt to collect eggs near the mouth of it.

It has been urged on our Department several times, by persons not familiar with fishcultural operations and who are not educated to the habits of the anadromous fishes that enter Eel River, that we catch the breeding fish for our egg supply from the fish that congregate in the large pools from the mouth of Bull Creek to the large pool at the mouth of the river. The fish that enter the river and linger in the large pools early in the season are not ripe and consequently they can not be spawned. Several attempts have been made during the last few years to collect eggs from the salmon on the lower reaches of the river, but for the reasons above mentioned all efforts have failed.

The Fort Seward Hatchery has been supplied with steelhead eggs from the Snow Mountain Egg-collecting Station located on the south Eel River, one of the tributaries of the main or middle Eel River. A careful examination of the Eel River system was made during 1918 and 1919 in an effort to locate an egg collecting station on the upper reaches of the river that would furnish both salmon and steelhead eggs enough for the whole Eel River in northern Humboldt County, and several other streams. The most favorable location found so far, is near Branscoms on the South Fork of the main Eel River in northern Mendocino County. The eggs can be collected at this point from fish that are ripe, as the site is located approximately 120 miles from the junction of the south fork and the main Eel River.

The south fork must not be confused with the South Eel River, as the two streams are miles apart and have their sources in different ranges of the coast mountains. The South Eel River, which in reality is the head of the main Eel River, rises in the middle range of the Coast Mountains. The south fork of the Eel River rises in northern Mendocino County in the Coast Range proper and follows the basin near the coast all the way to its junction with the main river. It is the principal tributary of the Eel River system and flows through a heavily wooded country from its source to the mouth and carries the largest amount of water during the fall months of any of the forks of the Eel River.

Judging from the amount of water, the topographical formation of the country through which it flows, and the temperature of the water, it is the branch of the river which the great majority of the steelhead and salmon enter to spawn. This cannot be determined to a certainty until an experimental station is operated for one or two seasons.

We are, at this writing, negotiating for a site near Branscombs to rack and trap the river and carry on the experiment. It is necessary for the maintenance of the run of the steelhead and salmon in Eel River, that a permanent egg collecting station be established where a sufficient number of steelhead and salmon eggs can be collected annually to furnish the Ft. Seward Hatchery with a regular supply of eggs as well as enough of the steelhead trout to furnish a supply for some of our other stations. If the station at Branscombs is established and should prove to be too far up the river, another location farther down must be found, if the fishing conditions in Eel River are to be maintained. It is necessary that a sufficient number of fry be planted each season to insure a good run of fish.

FIG. 9. A truck load of trout fry for planting in the streams of Trinity County. Although these fry traveled one hundred and one miles over mountain roads, only one hundred and one fish were lost during the entire trip. Photograph by John Gray.

A total of 1,757,000 trout fry have been distributed in the streams of the northwest coast counties, Humboldt, Mendocino and Trinity, during the seasons of 1918 and 1919, from the Ft. Seward hatchery. The fry were given a very wide distribution, most of them being steelheads and being planted in the Eel River and tributaries. The Mad River section was also given a fine lot of fry and fishing is reported to be excellent in that district as a result of the continued stocking of the streams.

During the biennial period two million Chinook Salmon were reared at the Fort Seward Hatchery and planted in Eel River, Mad River and the tributaries of Humboldt Bay.

### UKIAH HATCHERY.

The steelhead trout eggs taken at Snow Mountain Station have been "eyed" at Ukiah Hatchery each season, and the surplus eggs shipped from this point to other stations. Of the eggs retained and hatched at this station, 1,030,000 fry have been reared and distributed in the streams of Mendocino and Sonoma counties, during the season of 1918 and 1919.

Ukiah Hatchery was opened for operations in the spring of 1920, and the eggs taken at Snow Mountain Station were sent down to be "eyed," but on account of the extreme drought which affected our operations in this section to a greater extent than in any other locality, there was not a sufficient number of eggs taken to justify the hatching and rearing of fry at Ukiah. Then too, the water supply absolutely failed during the latter part of May and even had there been an adequate number of eggs available the station could not have been operated. As it was, we were fortunate in being able to "eye" the eggs and prepare them for shipment before the water supply gave out entirely. Consequently, all of the eggs were shipped to Fort Seward Hatchery, from which station they will be distributed in the waters of Humboldt, Trinity, Mendocino, Sonoma and Marin counties.

### SNOW MOUNTAIN.

During the spring of 1918 a total of 3,600,000 steelhead trout eggs were taken at Snow Mountain Station, and in 1919 we obtained 5,400,000. During both seasons the number of eggs taken could have been very materially increased had we been provided with adequate facilities for holding the spawning fish.

This station is located at the Cape Horn dam in the Eel River. The dam and the fish ladder over the same are the property of the Snow Mountain Water and Power Company. We secured from the Company a lease to the fish ladder, together with such buildings as are located on the site, and the privilege of operating thereon a hatchery and egg collecting station. A small battery of hatching troughs was installed and holding pens, etc., for the spawning fish were provided. As the fish ascend the fish ladder they are automatically trapped and swim directly into the holding pens, from which they cannot escape. It is a very cleverly arranged scheme and in addition to being a saving, by eliminating a great deal of work, lessens the loss of fish from handling. However, the capacity of the holding pens and "eyeing" equipment was not sufficient to enable us to handle the maximum of the capabilities of the plant, for the run of spawn fish in Eel River is enormous during favorable seasons.

To increase our equipment presented some unusual difficulties, however, and the expense would necessarily be considerable, so it was not

until the early winter of 1919 that we were enabled to undertake the work. While there were many unexpected delays in completing the construction, the station was all ready for operations by the middle of February, 1920, and the crew on the ground and in readiness for handling the largest take of eggs since the establishment of the station. But all of our efforts were unavailing. Week succeeded week of clear warm summer weather. There was no snow in the mountains and none of the usual spring freshets to increase the flow of water in the Eel River sufficiently to permit the breeding fish to ascend to the upper reaches of the river. During April the country in this section was as dry as it generally is in September. Springs, which normally flow throughout the entire year, dried up in April and May.

Only a very few fish succeeded in getting up as far as our station, and only 750,000 eggs were obtained as a result of our entire season's work. These were shipped to Ukiah Hatchery where they were "eyed" and from there sent to Fort Seward Hatchery.

During the biennial period 375,000 steelhead trout fry were hatched and reared at Snow Mountain Station and distributed in tributaries of the Eel River.

#### BROOKDALE HATCHERY.

All of the steelhead trout eggs taken at Scott Creek Station are immediately transported to Brookdale Hatchery where they are properly "eyed" and where all surplus eggs are packed and shipped to other stations. During the two years 1,559,000 steelhead trout were distributed in the waters of Santa Cruz and Santa Clara counties and a few also in Monterey and San Mateo counties.

Brookdale Hatchery is the property of Santa Cruz County and is operated by this Commission under an agreement providing that a half million steelhead trout fry be planted each year in the waters of Santa Cruz County under the direction of the board of supervisors.

Owing to the steady decrease in the water supply at Brookdale Hatchery during the last four years of drought and the increased amount used by the residents of Brookdale during the early summer, when the hatchery should have its maximum supply, we were greatly embarrassed in carrying on our hatchery operations. There was not sufficient water to keep the fish in good condition after the first of July, and the fry had to be distributed too early to get the best results. We are of the opinion that a new hatchery site should be selected in Santa Cruz County, if conditions do not improve next season. It is very doubtful if water conditions will improve at Brookdale Hatchery, as the water has been getting less each season for the last five years.

### SCOTT CREEK STATION.

During the past two years the Scott Creek Station has produced 3,900,000 steelhead trout eggs all of which, as above mentioned, have been sent as soon as taken, to Brookdale Hatchery.

During the spring of 1920, the same conditions prevailed in this section as in other parts of the state, although there was a little heavier rainfall than in the Snow Mountain section. During most of the season the water levels in Scott Creek were considerably below the normal, and the breeding fish were unable to enter the creek from the lagoon on account of the sand bars at the mouth of the stream. From time to time, however, the spring storms were sufficient to raise the waters to levels which permitted some of the fish to pass over the bars and ascend the stream as far as our station. As a result of our efforts 1,060,000 eggs were taken. While this number is only about half of our usual take, we feel that in view of the adverse conditions for egg collecting operations, we did very well to obtain this number. It insured the adequate stocking of Santa Cruz and Santa Clara county streams, as well as providing a limited number of eggs for Mount Whitney Hatchery. The steelhead fry hatched at the latter station will be distributed in streams of the southern counties from Santa Barbara to San Diego.

### ALMANOR HATCHERY.

Almanor Hatchery has been operated each season as an egg collecting station. It produced 261,000 rainbow eggs in 1918, and 282,000 in 1919. The water supply fails too early in the summer to permit the hatching and rearing of fry at the station, and accordingly, the eggs are transferred to Clear Creek or Domingo Springs Hatchery as soon as they are "eyed."

### DOMINGO SPRINGS HATCHERY.

This station was established as an experimental hatchery in 1916. Improvements were made during 1917, when the temporary plant was moved to Rice Creek, one of the main branches of the North Fork of the Feather River above Lake Almanor. A thorough test of the water and an investigation of the run of fish resulted in the establishment of a permanent egg collecting station and hatchery at this place. Accordingly, during the summer and fall of 1919, a permanent building was erected and a substantial trap constructed, one-quarter of a mile below the falls in Rice Creek. The site was procured from the United States Forest Service and we now have a very desirable station at that place which will furnish fry for the entire region surrounding the west side of Lake Almanor, as well as the lakes and streams in the Mount Lassen National Park and surrounding country.

During the two years 850,000 rainbow and steelhead trout fry were distributed in the streams and lakes in this district from Domingo Springs Hatchery. A total of 2,200,000 rainbow trout eggs was collected at this station during the two seasons.

Each season a consignment of steelhead trout eggs is shipped to Domingo Springs Hatchery and the resulting fry are planted in the high Sierran lakes of that region which are suitable for this variety. The steelhead trout have thrived remarkably well in the lakes of this section and afford some of the finest fishing in the state.

FIG. 10. Eyeing house and tank at Canyon Dam, Lake Almanor, Plumas County, April, 1919. Spawning operations must be begun under such conditions as these. Photograph by S. Campbell.

#### CLEAR CREEK HATCHERY.

The Clear Creek Hatchery and Egg-collecting Station was established in the fall of 1918, on the creek that bears its name, one and one-half miles from the town of Westwood, Lassen County. Clear Creek is a tributary of the Hamilton Branch of the Feather River. Before the construction of the dam forming Lake Almanor, it flowed into the valley known as Big Meadows, and united its waters with those of the North Fork of the Feather River, which entered the Big Meadows basin from the north. Hamilton Branch flows into the basin from the east. The Hamilton Branch has a run of rainbow trout that ascend the stream to spawn from Lake Almanor. Clear Creek being one of the principal tributaries of the Hamilton Branch a good portion of the spawners enter this creek. The distance from the Clear Creek Station to the Domingo Springs Station is approximately twenty miles. Clear Creek has its source in a large spring and the water is pure and cold as all the waters are that rise in a lava formation.

The Red River Lumber Company furnished the site and material for the Clear Creek Hatchery and the Fish and Game Commission furnished the labor for construction. We have operated there for the last two seasons with good results.

Clear Creek Station was first operated during the summer of 1918, 189,000 rainbow trout eggs being shipped in from Almanor Hatchery and the resulting fry reared to a good size and given a wide distribution in the waters in the vicinity of Westwood. During the season of 1919, 157,000 rainbow trout fry were reared and distributed from Clear Creek Hatchery.

#### BEAR LAKE HATCHERY.

In our Biennial Report of 1918, we made mention of the necessity of increasing the capacity of the Bear Lake Hatchery at Green Spot

FIG. 11. The old and new hatchery at Green Spot Springs, Big Bear Valley, San Bernardino County, May 21, 1920. Photograph by L. Phillips.

Springs. We had been using the old buildings that had been erected by the Southern California Trout Association, but it was poorly constructed and the arrangements of the troughs were not right to do good work.

After procuring a permit from the Forest Service for a site adjacent to the site leased to us by San Bernardino County, a new hatchery with modern troughs was erected and fully equipped for the hatching and rearing of trout fry. The site at Green Spot Springs is about twelve miles from the egg collecting station at North Creek. This is the only water available for hatchery purposes near Bear Lake. All the

creeks dry up as the summer advances, except some small springs used for domestic purposes.

The Green Spot Springs rise near the foot of Sugar Loaf Mountain and flow through a shallow ravine towards Baldwin Lake. The water is used by the Shay Brothers, on their stock ranch after it leaves the hatchery. There is approximately twenty inches of water in the spring. It is cool and free of any organic substances and is excellent hatchery water.

During the summer and fall of 1919, we planned to make general improvements at North Creek Egg Collecting Station and to erect a new hatchery at Green Spot Springs, with a capacity of 1,500,000 fry. The work was begun early in September, but owing to delays in getting materials, was not finished until late in November. At the hatchery at North Creek Egg Collecting Station, a portion of the eggs are hatched each season and the fry held until they are swimming well; then they are distributed in the most favorable places in Bear Lake, where there is an abundance of natural food. The fry can not be held in North Creek Station later than the middle of July as the water in North Creek fails by that time. The remainder of the fry reared for Bear Lake are held in the hatchery at Green Spot Springs until later in the season, when they are distributed in the lake in the shallows and other favorable spots. The condition of the water in Bear Lake has been very murkey and discolored for the last three seasons. Owing to the growth of algae and its decomposition during the period of low and warm water, the fish are compelled to go to the deep water, where the effects of the decomposing algae are not so great. The minnows and aquatic insects are in a measure affected in the same way and consequently, they seek the depth for the same reason that the trout do. The trout having an abundance of feed do not bite well or take any kind of a lure to a great extent during the warm weather. This condition will change when the normal amount of rain and snow falls on the water shed surrounding the lake, filling the streams running into the lake and thus carrying the organic matter away by the flood waters.

During the spring of 1918 a total of 3,500,000 rainbow trout eggs were collected at the North Creek Station. Eight hundred thousand eggs were transferred to the Bear Lake Hatchery at Green Spot Springs and the resulting fry were liberated in Big Bear Lake and in streams of San Bernardino County. The balance of the eggs were shipped to Mount Shasta, Mount Whitney and Mount Tallac hatcheries.

Four million eight hundred thousand eggs were collected at North Creek Station in 1919. Owing to the extreme drought and unfavorable weather conditions generally, in the Big Bear Lake country during the spring of 1920, our operations were practically a failure as far as egg collecting work was concerned. Despite all of our new equipment for

egg collecting operations and larger crews of spawn takers, we procured only 1,500,000 rainbow trout eggs. All of the eggs taken were hatched and reared at the North Creek Station and at the Bear Lake Hatchery, from which stations they will be given a wide distribution in the streams and lakes of San Bernardino County.

#### NORTH CREEK EGG COLLECTING STATION.

The egg collecting station at the mouth of North Creek was operated in a tent; the employees have also lived in tents since the spring of

FIG. 12. State hatcheries as they appear when spawning operations begin. In some instances employees are able to reach the egg-collecting stations by means of pack trains, but in other instances they must cover a considerable distance on snowshoes. a, b. Views of North Creek Station, San Bernardino County, March 25, 1920. Photographs by L. Phillips. c. Wawona Hatchery, Mariposa County, April 15, 1920. Photograph by M. K. Spaulding. d. Cabins at Almanor Hatchery, Plumas County, April, 1919. Photograph by S. Campbell.

1915, when the Fish and Game Commission first began the work of collecting eggs from Bear Lake.

Bear Lake is situated at an elevation of 6700 feet above sea level and the weather during March and April in this altitude is severe in any locality, particularly so in the Bear Lake region. The winds sweep unbroken over the deserts until the air currents strike the San Bernardino Mountains, when they drive with relentless fury down on the lake

and through the open timber near the lake shore where our men are camped. Snow storms and squalls follow each other in rapid succession, during the early spring. Our men endure hardships that very few appreciate, unless they have spent the spring months in a tent on the shores of Bear Lake. During 1919 plans were made to build suitable quarters for the help at North Creek Egg-collecting Station, a cabin a new trap on Metcalf Creek, and a cabin and trap on Grout Creek. A new trap was built in North Creek and the egg collecting station and hatchery was repaired and improved.

The principal streams entering Bear Lake, North Creek, Metcalf Creek, Butler Creek and Grout Creek were filled with sand from the high water mark on the lake shore to the waters edge, averaging in length from one-fourth to one-half mile. The creeks are all short, but carry a large amount of granitic sand caused by the disintegrated granite formation through which these streams flow. These creeks had been filling up for several years, until in the spring of 1919 it was almost impossible for the breeding trout to enter them, as the water was spread over such a wide area of sand deposits that the fish could not find water of sufficient depth for them to swim in. We planned to open these channels so that the fish could enter the streams and reach our traps. Teams and scrapers were hired and the channels excavated through the sand deposits so that the water would have sufficient depth at the mouth of the creeks. The spawning area above the traps is so small that it does not justify allowing any of the fish to spawn naturally. The streams nearly all dry up before the eggs are hatched, even if they are allowed to ascend the streams and deposit their eggs. The majority of the eggs deposited by the breeders below the traps do not hatch, as they are covered over with the sand that packs so tight over the eggs that they are smothered. Consequently, the stock of fish in Bear Lake must be kept up by artificial propagation almost entirely.

Years ago when the lake was first stocked the sand deposits were not so great, as the flood waters scoured the streams out each season, but during the last five or six years the sand has accumulated to such an extent that the creeks must be kept open by removing the sand every two or three years so that the fish can reach the traps.

Bear Lake has an abundance of natural feed for the trout. Besides the minnows, there are a great many varieties of aquatic insects that abound in the lake in great numbers. During the last three seasons of drought, these insects have increased, so that it is safe to say that there is not another body of water of equal size anywhere that has the same amount of natural food for trout.

The excessive fishing during the last five years on Bear Lake has no doubt considerably reduced the number of fish in the lake, although good fishing can be had when conditions are right. But owing to the

great numbers of persons who fish in Bear Lake and the easy manner in which the trout are taken when conditions are favorable, indicates in our judgment the necessity for a longer closed season. We do not believe any lake of the size of Bear Lake can stand the drain on its fish supply for years, without there being a marked decrease in numbers of adult fish. Bear Lake can easily be kept stocked by artificial propagation, but there is a limit to the area in which fish can thrive in Bear Lake during periods of low water, and as a precautionary measure we would recommend that the people who have the greatest interest in Bear Lake assist us in asking the Legislature for a longer closed season.

#### YOSEMITE EXPERIMENTAL STATION.

With the intention of keeping the streams of the Yosemite Valley adequately stocked with trout fry, the Commission, during the fall of 1917, made a survey of conditions obtaining in the Valley with reference to the establishment of a hatchery. A suitable site was obtained for a fine hatchery near Happy Isles and application was made to the Department of the Interior for a lease to the property required for our operations. We were given every assurance by the Yosemite Park officials that the Department would give us a suitable lease, and pending the outcome of negotiations for the same, we took advantage of a temporary permit granted us to establish an experimental hatchery on the site, in order that it might be definitely determined as to the practicability of the location for the propagation of trout. Arrangements were made with the State Department of Engineering for the preparation of suitable plans for the permanent hatchery.

The experimental station was established during the fall and winter of 1918 and was opened up for operations in the spring of 1919. Four hundred thousand rainbow, black-spotted and steelhead trout eggs were shipped to the station and the resulting fry were reared and planted in the streams and lakes of the Yosemite Valley with the cooperation of the Park officials. The fry were held in the hatchery until the middle of October and it was thoroughly demonstrated that the location was in every manner suitable for fishcultural purposes. The fry produced were vigorous and healthy and attained an unusual size in the few months that they were reared in the hatchery. Owing to improvements and repairs being made at the other stations, the work on the Yosemite Hatchery was deferred until such time as conditions were more favorable.

#### WAWONA HATCHERY.

The Wawona Hatchery was operated during the last two years in the building constructed in 1918, on the site of the old hatchery. All of the old equipment was installed in the new building, as at that time,

it was not possible to put in new equipment. Five hundred and fifty thousand trout fry were reared at the station during the two years, and were distributed in the streams of the Yosemite Valley and the region near the Wawona Hatchery.

All of the equipment removed from the Yosemite Experimental Station was taken to the Wawona Hatchery, where it was substituted for the old equipment, which had been in use for many years. With the new equipment from Yosemite Station, Wawona is much better equipped for taking care of the fishery requirements of that section. When it is possible to do so, it is planned to enlarge and properly equip this hatchery so that a larger number of fry can be reared for that section.

On account of the limited number of trout eggs taken this season, it was possible to ship only 300,000 rainbow trout eggs to Wawona Hatchery but this number are being held in the hatchery longer than usual and reared to a much larger size. This has been made possible by the better equipment.

#### KAWEAH HATCHERY.

Early in the spring of 1919, it was decided by the Commission, that to adequately stock the streams of Fresno, Tulare and a portion of Kern County, a hatchery should be located in the most favorable situation in that district. Accordingly, the proper investigations were made and the site located on the Kaweah River, near the town of Hammond, in Tulare County chosen as the most favorable for the purpose.

The site is located on the property of the Mount Whitney Light and Power Company, on the main highway to the General Grant and Sequoia National Parks, and has a water supply which is most excellent for hatchery purposes. It is the central distributing point for stocking the streams in that entire section. The location being all that could be asked for, an experimental station was established to determine the suitability of the water supply for fishcultural purposes. Three hundred thousand rainbow, 50,000 black-spotted and 100,000 steelhead trout eggs were shipped to the station during the latter part of May. The resulting fry were reared to an advanced stage and were given a wide distribution in the streams of the Sequoia and General Grant National Parks, and the entire Kaweah River system during the months of August and September. The fry were strong and vigorous and at the time they were planted, had attained an unusual size. It was demonstrated by the season's operations that the site selected is entirely satisfactory for the establishment of a permanent hatchery.

Negotiations were entered into with the Mount Whitney Light and Power Company, the owners of the site, for a lease extending over a

period of thirty years to cover the land necessary for the establishment of a permanent hatchery, together with a right to an adequate supply of water. Considerable difficulty in obtaining a lease which would satisfactorily safeguard the interests of the Commission was experienced and the matter dragged along until so late in the spring of 1920 that there was not time to sufficiently complete a permanent building in order to operate this season. The matter was therefore held in abeyance and operations for this season were carried on in the temporary quarters.

This hatchery received 300,000 rainbow eggs and the resulting fry will be distributed in the waters of that section as soon as they have attained the proper size. As soon as possible after the fry have been distributed, construction of the permanent hatchery will commence.

### FISHWAYS AND SCREENS.

#### Fishways.

The work of our fishway inspection service, has been retarded somewhat by the prevailing drought of the last few years, but in spite of this and other obstacles, remarkable progress has been made. As a result of several improvements on the types of fishways made by our surveyor, all the fishways installed under the plans made and approved by this Department have proved more efficient and practicable. Some of the old fishways installed several years ago have been improved now, so that the fish have no trouble in passing them.

The fishway over the Folsom Dam that has been a source of trouble for many years, because it was not built according to the plan designed, has been remodeled, and is now in good order. The steelhead trout that ascended the American River this spring had no trouble in passing this dam. Several other important fishways have been improved during the last two years in addition to surveys for eighty-two fishways located as follows:

Date 1918	Name of dam	Stream	County
Jan. 3	Samoza	Rector Creek	Sonoma
Jan. 9	State Asylum, Napa	Rector Creek	Napa
Jan. 18	Merced Falls	Merced River	Merced

July 6	Gray Eagle Dam	Gray Eagle Creek	Plumas
July 7	Slaot Dam	Long Valley Creek	Plumas

The work of maintaining efficient fishways over dams becomes more important each season, as the number of dams being built by the hydro-electric plants and irrigationists are increasing very rapidly. Every

time that a dam is constructed, the natural movements of the fish are obstructed and the fish in that stream are affected by it.

The fish in the great majority of our streams ascend the streams during the spawning season to reach their natural and most favorable breeding places. They also move from one part of the stream to another in search of food, as well as to adapt themselves to temperature conditions. The fish descend to the lower reaches of the large rivers that drain the Sacramento, San Joaquin, Kings, Kern, Kaweah, Tule, Klamath, Eel and other river basins during the fall and winter, when the water is cool, and ascend these streams when the temperature of the water rises in early summer. If their movements are obstructed by dams, the natural propagation is seriously interfered with as well as their movements to the upper reaches of the streams when the temperature rises. It is essential that proper fishways be constructed to allow of the free passageway of the fish as the law provides. The amount of water necessary to allow fish to ascend the fishways and pass above the dams is very small compared with the normal flow of any stream. Spring and fall, the period of the year when the fish are moving, is the period of the maximum flow in the majority of the streams, and there is always sufficient water for the fishways, as well as for the power plants and irrigationists.

There is a tendency on the part of some of the water-users to take all the water from the streams regardless of the fish life that is destroyed. While we realize the importance of the water to generate electricity and for irrigation purposes, there is always enough in our streams to allow the migratory fishes to ascend the streams above the dams at the time they are naturally inclined to do so. In a great many instances where large dams are constructed, and lakes formed, the fishing area is increased instead of diminished, if the owners of the dams will allow the public the right to fish in the waters stored behind their dams. The provision in Section 637, relative to the "right to fish" in any of the waters impounded by dams should be rigidly enforced as the owners of the dams deprive the public of valuable waters by the construction of dams, even if enough water is allowed to pass the dam, to maintain fish life.

The flows of the streams are generally reduced to such an extent below the dams that the value of the stream for angling purposes is greatly reduced, particularly during the period of the minimum flow in the late summer and fall. Therefore, the owners of dams should be compelled to allow the public to fish in all waters held in storage or where it is dammed up for any purpose, as the right of the public to fish in the waters of the state should not be denied. It is one of the greatest sources of recreation known and is growing more popular with all classes every season.

**Screens.**

During the last two seasons it has been very difficult to install screens, owing to the drought that has prevailed all over the state for the past three years, but in spite of the difficulties, we have managed to have some important screens installed as well as to have others, which were installed several years ago, maintained in good order.

The large pumping plants that take their water supply from the Sacramento River for the rice fields have been examined from time to time and it has been found that the screens that have been installed are very effective. Our screen inspector has made regular trips, examining and reporting on the condition of all the pumping plants, ditches, and canals in the different sections of the state. A large portion of his time has been given to the district north of Sacramento, as this is the most important field. Several types of screen are used, depending on the location and general conditions.

The majority of the owners of pumping plants and canals have met our requests to screen their intakes without opposition. A few have been lax in their cooperation with this Department, but we are pleased to state that they are in the minority.

Surveys and legal notices to install screens for the biennial period ending July 1, 1920, in the different counties, numbered 171. They were made as follows:

Alpine	11
Butte	7
Calaveras	4
Colusa	2
El Dorado	6
Glenn	5
Inyo	27
Kern	1
Lake	1
Lassen	1
Mono	28
Placer	1
Riverside	4
Sacramento	6
Sierra	2
San Bernardino	1
Shasta	3
Siskiyou	41
Stanislaus	5
Sutter	1
Tehama	4
Trinity	2
Tuolumne	2
Yolo	4

171

The follow up work by the Legal Department has been very satisfactory. Very few hearings were held as most of the owners of ditches and canals realize the importance of conserving the fish and as a rule do not resist efforts to have efficient screens installed.

There is one part of the present law regarding screens and fishways that we would respectfully recommend the Legislature to repeal, and

that is that part of Section 629 and 637 relating to hearings. We would suggest that whenever there is a difference of opinion between this Department and the owners of a ditch, pumping plant, canal or dam, regarding the advisability of installing either a fishway or a screen, that the case be taken directly to the Superior Court, which is the proper tribunal to determine whether the ditch, canal or intake should be screened, or a fishway constructed.

In our judgment the hearings held by our Commission under the present law are not satisfactory. Before ordering anyone to install a screen or fishway, we make an investigation and satisfy ourselves of the necessity of the expense. Therefore, we deem it a waste of time and money to hold hearings before one of our employees to satisfy the demand of some one for a hearing. If any of the owners of ditches, canals or dams are not satisfied or question the necessity of installing a screen or fishway on their particular property, they have their redress in the courts, where all such cases will eventually end, if the persons on whom legal notices have been served resist the orders to install screens and fishways.

There never was a time in the history of our state when legislation to conserve our fish by the installation of proper screens and fishways is needed more than at the present time, owing to the great amount of water that is being diverted for agricultural and industrial purposes. The fish can be saved without material injury or damage to the hydro-electric plants and the irrigationists if proper and stringent laws are passed and enforced, as all plans for fishways and screens are practicable and efficient.

In some instances we have found the district attorneys were not in favor of prosecution for violations of these laws, but it was generally found to be a matter of politics more than any just reason for not standing by the rights of the people.

The fish of the inland waters, both food and game species, are one of our most valuable assets and everyone concerned in the progress of our state should assist in protecting and conserving them.

#### PLANTING FOOD FOR TROUT.

In some of the lakes of the southern High Sierra and in the Tahoe Basin, attempts to introduce aquatic insects where the waters were barren of certain species have been made. The large *Corydalis*, or salmon fly, has been introduced into several streams running into Lake Tahoe, during the last two seasons and our foreman reports that they are thriving. In the lakes of the southern High Sierra where all kinds of insect food is secured aquatic plants and the scuds or gammarus have been planted. We have not received any reports regarding the success

of this work as yet. It may be that the aquatic plants will need to be well established before the success of this work is assured.

It is the plan of this department to take up this work systematically during the next season and stock with insects and aquatic plants certain lakes that need an added stock of natural food. Examinations will be made to determine the larvæ of the different species that abound in the lakes that seem to require an added amount of natural food and new species will be introduced wherever the conditions justify the expense. This is an important work and should be carried on systematically each season so that the best results may be attained.

#### COOPERATION WITH THE WATER COMMISSION.

We respectfully recommend that an act be passed by the coming session of the Legislature that will arrange for the coordination and cooperation of the Water Commission with the Fish and Game Commission in regard to appropriated waters. It should be understood and agreed that the fish in certain streams of the state be allowed water enough to survive during the minimum flow of late summer and fall.

The State Water Commission should be authorized to force all applicants for water appropriations to comply with the law regarding fishways before accepting any plans for diversion of the water. The applicant for water rights should have the plan of the fishway made and approved by the Fish and Game Commission strictly in conformity with the law before granting applicants the right to appropriate water from any river or stream.

The rights of the people should be safe-guarded as far as possible when not detrimental to greater interests. No stream should be entirely diverted without some effort being made to protect the rights of the people. There are cases now where the entire flow of water has been taken without any consideration for the fish life in the stream. The valuable food and game fishes of California should be protected as well as all other interests and it can be done without injury to the hydro-electric plants or the irrigationists, if the Water Commission and the Fish and Game Commission cooperate in the plans of allowing sufficient water to pass the dams on the larger streams during the period of minimum flow as well as to see that plans for efficient fishways are made by the Fish and Game Commission before the appropriations are granted.

A great many other recommendations will be made during the session of the Legislature regarding changes in the trout and salmon seasons, and means of strengthening by amending some of our present laws regarding other subjects.

Respectfully submitted.

(Signed) W. H. SHEBLEY,  
*In Charge, Department of Fishculture.*

## REPORT OF DEPARTMENT OF COMMERCIAL FISHERIES.

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: The growth of California's fisheries in the past few years has been rapid and spectacular. So very recent has been this growth that few in this state realize that we have gained first place in the list of states both in the quantity and value of our fishery products. In 1919 California produced over 250,000,000 pounds of fish and about 8,000,000 pounds of shell fish. These fish had a wholesale value as fresh fish and manufactured products of over \$25,000,000.

If this great industry is to be fostered and the exhaustion of any of the varieties of fish upon which it depends guarded against, and if at the same time the fishery resources of the state are to be adequately utilized and the industry expanded along proper lines, it is necessary to carry on a great deal of investigation work and to get intelligent legislation and to see that the conservation laws are enforced. The state, which has sole jurisdiction over its fisheries and is alone responsible for their protection, has charged the Fish and Game Commission with this conservation work. As the state laws defining the duty of the Fish and Game Commission in regard to fisheries investigation work were not very definite, the Legislature of 1919 passed the following law:

It shall be the duty of the Fish and Game Commission to gather data of the commercial fisheries and to prepare the data so as to show the real abundance of the most important commercial fishes; to make such investigations of the biology of the various species of fish as will guide in the collection and preparation of the statistical information necessary to determine evidence of overfishing; to make such investigations as will bring to light as soon as possible those evidences of overfishing as are shown by changes in the age groups of any variety of fish; to determine what measures may be advisable to conserve any fishery, or to enlarge and assist any fishery where that may be done without danger to the supply.

This, together with laws which provide the means for gathering complete and accurate statistics of the fisheries, as well as laws which provide a revenue from the fisheries, puts the fisheries conservation work of the state on a firm and definite foundation, and assures the continuation of investigation work which owes most of its value to the fact that it is continuous.

To the Department of Commercial Fisheries falls the duty of carrying out the commercial fisheries work of the Commission.

## STATISTICS OF THE FISHERIES.

In the appendix to this report will be found statistical tables gathered and compiled by this department which show in detail the magnitude of California's fisheries. Complete recent statistics of most of the other states are lacking but we believe none will contest California's claim to

first place in both quantity of catch and value of its fishery products. Only six years ago she held a place of insignificance among the states in value of her fisheries.

FIG. 13. The growth of the sardine fishery. Quantities landed as compared to those for other species.

FIG. 14. Sardines landed at Monterey, San Pedro and San Diego.

FIG. 15. Comparison of cases of fish of all kinds packed in northern and southern California.

The greatest growth has taken place in the tuna and sardine fisheries. The accompanying graphic charts show the growth of the principal fisheries during the years from 1916 to 1919, inclusive.

#### SYSTEM FOR GATHERING FISHERIES STATISTICS.

As statistics must be the basis of all earnest fisheries conservation work, this department early in its history began gathering data of

FIG. 16. Comparison of number of cases canned, value of packing plants and number of employees.

said record to be in triplicate carbon copies and on forms to be furnished by the Fish and Game Commission, which shall show the name of the fisherman and boat or the dealer from which the fish, mollusks or crustaceans were received, together with the date received, the weight of the fish, mollusks or crustaceans by species, the price received by the fishermen and the name of the person receiving same.

It shall be stated in the record for what use the fish are intended, whether to be sold fresh or whether they are to be canned, cured, made into fish meal or fertilizer, or any other disposition to be made of them, or if a commercial distinction is made

the catch. Laws were passed requiring fish dealers and packers to submit monthly reports of the fish catch by varieties. Later it was realized that to be of the greatest service to the fisheries investigator such data must be made more complete and accurate than is possible by that method. Therefore, a system was inaugurated which has worked out in an entirely satisfactory manner. At first the data under this system was furnished voluntarily by the industry, but in order to make it permanent a law was enacted by the State Legislature in 1919, which makes the giving of the data compulsory. Every effort is being exerted to make this data as accurate as possible, realizing that accuracy is the main requisite of the investigator. Such data increases

greatly in value with the passing years. As this system of gathering the data of the catch is unique and superior to that employed by any government or state fisheries board, we quote the law governing it:

Sec. 2. Every person, firm or corporation engaged in the business of buying, canning, curing or preserving fish, or manufacturing fish meal, fish oil or fish fertilizer, or dealing in fish, mollusks or crustaceans, shall make a legible record in the form of a receipt,

between different sizes or qualities of any species or variety, it must be so stated on said record or receipt, and the record shall also state if the fish were taken in foreign waters, or in the high seas off another state or foreign country. The names used in the record for designating the variety or species of fish handled must be the name which is in common usage, and the Fish and Game Commission shall have the power to decide what is the common usage name of any variety.

The original copy of this record shall be delivered to the fisherman at the time of the purchase or receipt of the fish, the duplicate copy shall be kept by the dealer or person receiving the fish and the triplicate copy shall be delivered to the Fish and Game Commission or any duly authorized assistant thereof.

Where a fish dealer, canner or preserver catches his own fish, he shall fill out the above record as required when he purchases the fish from fisherman or dealer, or if it so desires the Fish and Game Commission may furnish a separate form for such cases. It shall be the duty of the Fish and Game Commission to preserve all such records of the fisheries as are obtained by it in places adequately safeguarded from fire or other destructive agencies and such records are to be kept in such manner as to render them accessible for reference or research, the intention being to guard against the destruction or such neglect of the records as will detract from their future value.

This system is now in use all over the state and from the records gathered can be obtained the daily catch of any variety of fish by any boat, which, it will be realized, is of the greatest value in keeping track of the trend of any fishery and in detecting any evidences of depletion. Supplementing this data must be a record of the boats and the fishing gear used, therefore a section of the same law requires that every boat fishing in the state or out of any port in the state, must file with the Fish and Game Commission a statement giving the dimensions of the boat, the motive power, number in crew, equipment and description of fishing gear.

A section of the law also provides that large fishing vessels, such as otter or beam trawls or those operating paranzella nets can be required to keep a record of their trips, number and place of hauls and quantities of each variety of fish caught in each.

Fisheries data is being gathered and tabulated under these laws and published in the Commission's quarterly magazine CALIFORNIA FISH AND GAME. The permanent records in the form of the triplicate receipts of the catch and the boat registration cards are being filed in such manner that they may be of the greatest good to the fisheries investigator when they may be needed. The need of a building for the filing of these records where they will be safeguarded from destruction by fire or other causes as required by the law, as well as to provide a proper place for investigators to work, is taken up elsewhere under the title, "A State Fisheries Laboratory."

During the principal fishing seasons the data of the catch of some of the fisheries have been gathered and tabulated daily for the accommodation of the fish packers. During the present year the catch of the more important canning varieties have been tabulated four times a month for the use of canners of the San Diego, San Pedro and Monterey districts.

To gather the statistics of the catch, to register the boats and fishing gear and to do the necessary tabulating, has necessitated putting on an extra assistant in the branch offices of the Department of Commercial Fisheries in San Diego, San Pedro and Monterey, as well as an extra statistical assistant in the San Francisco office. It is difficult to estimate the cost of this system of gathering the records of the catch as each statistical assistant has other duties to perform which have little to do with statistics and as assistants in other lines give some help in gathering the records. But, as we have had several inquiries as to the cost of the system, we have estimated it as near as we can. The books of receipts which are furnished the dealers and packers are costing us approximately \$485 a year. It will be fair to charge to the system the services of one assistant at the four fishing centers, San Diego, San Pedro, Monterey and San Francisco, which with traveling expenses will amount to approximately \$650 a month. Any state adopting the system would require one assistant at each fishing center. Each should have a suitable place to work upon the tabulations and should be provided with adding machines. This covers only the cost of gathering the records and roughly tabulating them. To work out the boat catches for conservation purposes is work for the investigator. A proper place should be provided for storing the triplicate receipts in such a manner that they may be readily accessible for future study and where they will be safe from destruction or damage. On account of the large number of small boats fishing, California uses more triplicate receipt books than would be used where larger catches per boat are made.

#### INVESTIGATION.

Our statistical program is only a part of the work. While it is the basis upon which much of the work of the investigator must rest, it must be supplemented by a study of the biology of the species upon which our principal fisheries depend. The investigations are not being conducted merely through a scientific interest in the species dealt with; they are conducted for the primary purpose of conservation and the intelligent expansion of the fisheries. The investigations are all based on the needs of the fisheries and in all there is a well defined program which has been arrived at through the experiences of fisheries investigators of this and other countries. The object and method of the investigation work has been stated very fully in the Fish and Game Commission's Fish Bulletin No. 2 by W. F. Thompson, entitled "The Scientific Investigation of Marine Fisheries, as Related to the Work of the Fish and Game Commission in Southern California." We will not discuss here the needs of scientific investigations or the methods of the work as they are given full treatment in this Bulletin.

**Albacore Investigations.**

The investigation work on the albacore or longfinned tuna has progressed under Mr. W. F. Thompson and his assistants until now very definite results have been obtained and are being prepared for publication.

Very complete data have been gathered from the very beginning of the albacore industry and this wealth of material, more extensive we believe than that ever gathered from any one fishery, is in its final analysis disclosing facts of great value to the fishery. As long ago as 1915, a paper was read before the Western Division of the American Association for the Advancement of Science, at San Diego, by one of the leading tuna packers, in which paper this packer stated that it was feared the albacore even then might be undergoing depletion on account of too intensive fishing. The demand for canned tuna was so great that the canneries were being enlarged at a reckless rate, the number of albacore fishing boats was being rapidly increased mainly on capital furnished by the canners. There was a growing belief that the schools of albacore were not so extensive as a few years before and there was a tendency to increase the price to the fishermen for the fish. The paper voiced the sentiment of the packers at the time in a plea for a scientific investigation of the albacore fishery for the purpose of determining its limitations and to give the packers some idea of the permanency of the industry and as to whether the expansion had reached the limit to which it could be safely extended, or if it had already passed that limit. These were practical and extremely important questions being asked of the scientific investigator by an important industry, and the interest created by the discussion which followed hastened the activity of the state in its fisheries work, which until that time had not been taken up by it in a serious manner.

It takes time and accurate data extending over a period of years to determine if depletion of a fishery is taking place. The total yearly catch does not give an indication unless we also know the number of boats and the kind of fishing gear used in making the catches. This data has to be obtained. Fish are also subject to fluctuations in abundance due to natural causes and not to fishing, so it is necessary in such an investigation to get the data which will enable us, by methods known to the science of fisheries conservation, to determine if periods of scarcity are due to overfishing or to natural causes.

Extensive data has now been gathered and will continue to be gathered an analysis of which will show these very things which we wish so much to know. While the data does not extend over a sufficient number of seasons to enable us to be absolutely certain that depletion of albacore in California waters has not taken place, it is sufficiently extensive to enable us to say, with enough assurance to answer the

requirements of those in the industry, that the present fishing is not causing depletion and that the fluctuations in abundance from season to season are due to natural causes. The analysis of the relative abundance of albacore during past years, as made by this commission and published in the Pacific Fisherman Year Book 1919, showed a steady fall in the catch of the same unit of gear from year to year. Based on that evidence alone this would indicate depletion, but from other facts, mainly that the proportion of older fish caught at the latter end of the season, held up, we are led to believe that the fall in relative abundance of albacore during these years was not due to depletion but to natural causes. This conclusion is borne out by the fact that the catch for 1920 has shown a decided increase, which coupled with the reappearance of younger classes of albacore are encouraging signs.

A necessary part of such a fisheries investigation is to work out a method of determining the age and rate of growth of the fish. It is of great importance to be able to determine the relative abundance of the age classes of the fish under investigation, in order that depletion may be distinguished from natural fluctuations in abundance and to furnish information upon which to predict the abundance in the future seasons.

The work on the age and rate of growth of the albacore has progressed to where it is now ready for publication. The usual method of determining age is by means of the marks or winter checks on the scales. These marks proved to be extremely difficult to decipher by the simple method of viewing them through the microscope. A special technique was used to decipher them which entailed a great amount of painstaking labor. The method is a distinct contribution to the science of fisheries conservation for it proves by a strictly mechanical method which is entirely free from the influence of the workers personal judgment that the marks on the scales correspond absolutely with the age of the fish. The importance of this contribution will be seen when it is known that well known biologists have expressed their doubt if the marks on scales do actually show age. This is the first direct knowledge we have of the age of any of the fish belonging to the mackerel family.

The work on the age of albacore shows that it is a fast growing fish, which is encouraging, for on that account the fishery can stand heavier fishing than if it were a slow growing fish. The study of age has also thrown light on the migration of these fish. These matters are thoroughly discussed in Mr. Thompson's paper.

Much work has been done on the migrations and fluctuations in the run of albacore. A relationship between the catch and temperature, or some factor allied with temperature, has been shown. A couple of papers by Mr. Thompson have already pointed out this relationship.

But since their appearance a great deal of additional work has been done and the whole subject of migrations and fluctuation of the catch will be treated in a subsequent paper which is now being prepared for publication. It is sufficient to say that the results show that there are no sudden and long migrations made within a season as has been believed by many of the fishermen and caused them to make long trips up and down the coast in the belief the schools had made an extensive migration.

There is evidently a migration to the northward through a period of years but the migration of any one year class is comparatively limited. During the short periods when they do not take the hook they are undoubtedly near at hand, probably deep in the water, but the conditions which are allied with the temperature, are such that they do not feed at the surface and therefore do not come within the range of the hooks of the fishermen. This knowledge should prove of economic importance to the industry.

#### **Sardine Investigation.**

Although there is probably no immediate danger of depleting the supply of sardines in this state, the time to begin an investigation is while this industry is yet young and before depletion takes place. The rapid growth together with the magnitude and importance of this fishery has caused us to concentrate our efforts upon it. A considerable amount of preliminary work was done by Mr. W. F. Thompson, assisted by Mr. Elmer Higgins, Mr. A. W. Warnock and others. In this work, begun two years ago, the breeding season was observed, a series of scales and other data were collected for the study of age and rate of growth. A set of careful observations were made on the difference between sardines from San Diego, San Pedro and Monterey to determine the interdependence of the fish in the different regions. This point is of importance for it is vital to know if the sardines of each fishing center constitute a local problem or if there is an interdependence between the different regions. A report on this part of the work will soon be out. Very good supplies of very young sardines were collected during the investigations carried on by the patrol boat "Albacore," which throw much light on the spawning habits of the sardine.

About a year ago the sardine work was taken up in a thorough-going manner and a well defined program laid down designed to meet the needs of the fishery. This program was published in Vol. 6, No. 1, pp. 10-12 of our quarterly magazine CALIFORNIA FISH AND GAME. It also follows the general plan as set forth in Fish Bulletin No. 2. The program although scientific is extremely practical and meets well the

needs of the fishery. To quote CALIFORNIA FISH AND GAME, Vol. 6. No. 4:

The program under which the work has been done contemplates (1) the discovery of depletion if it should occur, (2) the discovery of great natural fluctuations in abundance or quality other than those due to over-fishing, (3) the foretelling of these fluctuations, which in other fisheries have at times caused great damage, (4) the deciphering of those habits of the species which are of importance to the canner and fisherman, such as migrations, and (5) knowledge of such facts as will aid the legislator. The absolute completion of this program is without doubt well removed, but contributions to it of great value will be made in the very near future, enabling us to make at least provisional answers, a thing impossible now. Among these we may list the age and rate of growth, the breeding season, and the interdependence of the sardines in different regions. That the fore-telling of fluctuations is not necessary may be seen from the work of the Norwegian fishery authorities on the herring. The other elements of the outline given are dependent entirely upon the records we obtain—and we are acquiring the very best possible.

The most valuable results to be expected from these investigations will be the ability to detect the earliest evidence of depletion so that we can permit the industry to expand without fear of greatly overrunning the limit of safety for the future of the industry, to detect natural fluctuations in abundance from depletion and to be able to foretell the abundance of the different canning sizes in the next or subsequent years.

#### Clam Investigation.

Since April, 1919, F. W. Weymouth has been devoting a portion of his time to the completion of a survey of the shellfish of the California coast commenced several years previously by Will F. Thompson. A report is now in the hands of the printer (Fish Bulletin No. 4) embodying all the collected data. The primary purpose of the survey has been to put on record the number and abundance of the species of commercial importance and the location and condition of the beds at present being utilized. The scope of the report has been extended by the inclusion of descriptions and figures together with a key for ready identification of some forty species of present or possible commercial value. Heretofore no such key has been available, and it is hoped that by this publication campers and amateur clam diggers can be made acquainted with the edible bivalves of the coast. Beside the description and range of each species an account of its habits has been included. Though many collections of attractive and interesting "shells" have been made there are few observations on the varied habits of these mollusks and it is hoped that those recorded in this report may lead to more study of the remarkable ways in which the bivalves are adapted to the diverse conditions of life under which they are found.

In connection with this survey certain important points have developed. One is the need for a more detailed study of the life history of at least some of the more representative and important species. At

present, though several of the eastern species have been carefully investigated, no facts concerning the age or rate of growth of a single native Pacific species are known.

In an attempt to remedy this lack, data have been collected throughout the year on the Pismo clam, one of the most important California species, and these are now being carefully studied. The preliminary work indicates the main features of the age and as soon as it can be completed it will be put in form for publication. It appears that the growth is less rapid than has been supposed and that a considerable age is reached by the larger specimens met with.

A careful survey of the coast has forced the conclusion that few of the native species can be materially increased by artificial means, but that in certain suitable bays the "farming" of the introduced soft shell or long clam might be made very profitable. Its culture has passed the experimental state on the eastern coast and profiting by this experience many acres of otherwise barren tide flats might be made to yield as sure and valuable a crop as a wheat field. It is hoped that in the future the question of the control of suitable tide lands may be put on as secure a basis as is the management of existing oyster lands, thus making such clam farming a practical possibility.

#### Oyster Investigations.

During the past year Dr. Harold Heath has been employed on investigations relative to the propagation of our native California oyster. The larger Eastern oyster has never yielded to efforts to propagate it in this state for the principal reason that our waters during its spawning season are entirely too cold. It has been necessary, therefore, for the growers of Eastern oysters to keep their beds stocked by bringing out the spat or seed oysters from the Atlantic coast. After the oysters have reached the size known as "spat" they will thrive in our waters but the younger larval stage can live only within a narrow range of temperature which is above that reached by the water in any of our bays where oyster raising has been tried. Our smaller native oyster on the other hand, propagates within a comparatively wide range of temperature and breeds naturally from San Diego Bay to Alaska. It is known in the far North as the "Canadian oyster," in Washington as the "Olympia oyster" and in this state as the "California oyster."

In Washington much progress has been made in raising this Pacific Coast oyster and by means of expert advice the industry has been made quite profitable. Choice oyster bottoms on Puget Sound are valued as high as \$4,000 per acre.

The only place in this state where it has been at all profitable to gather the native oyster is on Tomales Bay, Marin County. Although

these oysters are said by oyster men to be the equal of the better known Olympia oyster, no very intelligent effort has been made to increase the yield. Occasional trials have been made to obtain a better set by placing out shells or other objects as collectors to which the young may attach themselves. In these trials the collectors have mostly been put out at the wrong time or in the wrong place. In response to requests for aid, Dr. Heath was employed to conduct the present investigation. The work was mainly done on Tomales Bay for the reason that assistance and co-operation could be had from the local oyster companies. The knowledge gained, however, can be applied to any locality where the conditions for oyster growing are favorable. Although the work was in the nature of a preliminary investigation, and only a comparatively small amount of time was consumed, the work was done with the immediate needs of the industry in view and resulted in clearing up several points vital to the success of the industry. The knowledge thus gained should result in the growing of California oysters on a large commercial scale, not only on Tomales Bay but in several of the other bays of the state.

A preliminary report will soon be published giving the progress of this work so that we will give here only very briefly some of the results. It was found that in the immediate vicinity of the natural oyster beds remarkable "sets" can be obtained on oyster shell collectors if these collectors are put out at the right time. Collectors placed in the water too soon accumulate a coat of slime and sediment which permits only a very few of the embryo oysters to become attached. It is necessary, therefore, to put out experimental collectors at intervals or to observe the relative abundance of free swimming oyster larvae, in order to determine the proper time for putting out the collectors. This work must be done by an experienced person for it is necessary by means of the microscope to distinguish the oyster larvae from the larvae of clams and other mollusks. If this information is supplied each spatting season, it will be possible for the industry to expand greatly. It is now quite certain that the young oysters can be collected on oyster shells or other collectors and later transplanted to prepared beds in places where no oysters grow naturally, just as has been done in Puget Sound. In this way large areas which are now unproductive can be made to maintain beds of oysters.

Work was carried on to determine the distribution of the free swimming larvae in relation to water salinity, temperature and currents. The rate of growth and character of food supply were also subjects of study. Experiments were made in transplanting both young and adults to different parts of the bay to determine how much of a change in salinity or temperature they can withstand.

**A STATE FISHERIES LABORATORY.**

As stated toward the beginning of this report, the fisheries conservation work of any state or government, to be adequate must be based upon detailed and accurate data of the catch. These data gain in value as the years progress and in order that they may be properly preserved and kept available for the investigators, they should be kept in a permanent depository where they will be safe from fire or other destructive agencies. This depository should be in the building where the fisheries work is being carried on. It is also necessary that the investigators have suitable quarters in which to carry on the work upon the biology of the species upon which the principal fisheries depend.

Within these quarters there should be space for a working library dealing with fisheries subjects. Space should also be provided for the collection of specimens and biological material. Storage room is needed for nets and other apparatus used in connection with the investigations and finally it is very desirable that space be had to exhibit to those interested the extent and methods of the fisheries and more especially to show in graphic form the progress and achievements of the investigation work.

So far we have rented quarters wherever we could find them and this has proven to be very unsatisfactory. In fact, it has been impossible to rent anything that even approaches our needs in the locality where such a laboratory should be located. The laboratory quarters have had to be moved frequently and the workers are now scattered so that it is difficult to systematize or to supervise the work.

In order that the records of the fisheries may be safe from destruction by fire we have had to store them where they can be referred to only with great difficulty. There has been no room for the library which is being accumulated nor is there space for the collections.

To meet this need for adequate and permanent quarters plans have been made to build a state fisheries laboratory. We have secured from the City of Los Angeles free of charge, a long term permit to occupy a site at Fish Harbor, San Pedro, situated at the intersection of Seaside avenue and Tuna street. This location is central to the canneries, markets and docks of the most important fisheries center in the state. Tentative plans for a fire proof building have been approved and placed in the hands of the State Architect for the final draft and specifications. The estimated cost of the building is \$20,000. We quote in the following from a statement of the aims of this institution by W. F. Thompson and published in CALIFORNIA FISH AND GAME for October, 1920:

"It will be well to state now as clearly as possible those ideals to which the Commission is planning to dedicate a unique institution. Such a statement may save misunderstanding and opposition, and should give to those interested an appreciation of the underlying purposes such as will enable them to comprehend the reasons for the choice of site and for the plans adopted. The site was chosen because of its

proximity to the canneries and the fish wharves, making it possible to follow easily the progress of the fishery. The plans adopted are intended to give good working room for a statistical and biological study of the fisheries for the purpose of conservation and adequate utilization and at the same time to allow an exhibit to those interested in the purposes of the work and its relation to the fisheries.

That the primary purposes of the investigations of the California Fish and Game Commission are conservation and adequate utilization has been stated many times. But such purposes have been repeatedly avowed by investigators, whose programs when adopted have betrayed a primary interest in general natural history, and have shown little relationship to the problems to be solved. The scientific program of the Commission has, however, been planned very specifically to meet the problems which are involved in governmental control of the fisheries, and are adapted to meet the responsibilities of the state as legal guardian of those natural resources. The machinery for the execution of this program is, in fact, already operating in part, and its purposes are stated very clearly in the laws of the state as duties of the Commission.

The law then goes on to make provisions for the statistical system now in use as one of the bases for the scientific work. This system is to the best of our knowledge one without parallel in any country, and it has already proved itself superior to any statistical system we are acquainted with. It registers the catch of every boat, leaving its record for subsequent study by scientists in conjunction with other records by which changes in apparatus and economic conditions may be discounted, in order that there may be obtained a measure of the fluctuations in abundance of fish from year to year. It will be inevitable, in the future, that any scientific program carried on by the possessors of such complete records as, by this law, we shall eventually have, will be a program designed to discover the meaning of such records in terms of abundance and scarcity of fish. That there are faults in the system must be granted, but the faults are infinitesimal compared to those of statistical systems depending upon estimates and hearsay. The laboratory will provide for the filing and the study of these records.

But this statistical work is only a part of the program, and in formulating both this and the biological, which is in a way the more important, the Commission has had before it the several programs adopted during the last two decades in other countries, notably in those bordering the North Sea and our North Pacific, and from these programs and their results it has been possible to decide within somewhat narrow limits what knowledge is necessary to competently legislate for our fisheries. The failures and successes of others during the recent great advances in fishery science have profited us. And in this fact is seen the reason why the program for the proposed laboratory will be a really vital one, *dealing with questions which actually face the legislator and the men interested commercially*. It will lack the vagueness of random natural history investigations, and it will avoid the limitation in value of technological research. In the future we may justifiably hope that the investigations carried on in the new laboratory will further define and clarify the many problems to be met with.

And in thus reviewing the work in other fields perhaps the most obvious fact has been the absolute necessity of access to the vast store of specimens and data to be furnished by the commercial fisheries. No agency could afford to duplicate this store, despite its vital importance to any investigations. And this has, in fact, determined the location of the laboratory and dominated in the construction of its plans. Another obvious conclusion to be drawn from the work of others has been the necessity of obtaining popular support by exhibiting to those interested the purposes of the work, and its achievements, as well as by showing graphically the necessity for it. Because of this there has been planned an exhibit room.

The great scientific value of this work may not be immediately obvious to the scientist who is interested in some of the more basic laws of biology. It may appear too practical. Yet this definition of aim, and practical trend actually heightens the value of the work from the standpoint of general science. The problems faced by the legislator are, in striking degree, the same as those in which the student of geographical distribution, and of evolution is or should be interested, and the material offered by the commercial fisheries far exceeds in extent that which can be obtained through other sources. The degree of isolation of different races and the extent to which it leaves its traces on the morphology or habits of the species is of great importance to one pondering the value of protection to a species overfished in a particular locality, just as it is to the man interested in the formation of races and

species. The rapidity of growth, the distribution of pelagic ova or larvæ by currents, the response of the species to changes in surrounding conditions, all affect both the conclusions of the naturalist and those to whom the apparent abundance of fish is vitally important. Above all, however, our program will be most vital to the progress of hydrographical science in its relation to the food supply of man, through what is in reality the most essential purpose of our work—the measurement of the actual abundance of fish in the ocean. The effect of hydrographical conditions on fish can not be measured without a knowledge of the real abundance of fish, of the rate of growth, and the habits. So, in addition to being dedicated to the service of competent legislation for conservation and utilization, the laboratory will be in a very real way an essential part in the progress of more general scientific knowledge."

#### FISHERIES PATROL.

Most of the fisheries conservation laws of the state apply to the Sacramento and San Joaquin rivers and to the San Francisco Bay region where intensive fishing has been longest carried on and where more species of fish are in need of protection. For the enforcement of these laws we have five patrol boats. San Francisco Bay and the near outside waters are covered by the boats "Quinnat" and "Steelhead"; the river fishing districts by the boats "Rainbow," "Barracuda" and "Shad." The first two boats are directly in charge of this department. The other three come under the head of general patrol as they

FIG. 17. Commercial Fisheries patrol boats. a. The "Albacore," June 3, 1918. Photograph by E. M. Nielsen. b. The "Steelhead" patrolling the lower Sacramento c. The "Quinnat." Photograph by N. B. Scofield. d. The "Rainbow" at time of launching in 1919. Photograph by A. M. Fairfield.

have much game patrol work as well, and are directed by the chiefs of patrol of the San Francisco and Sacramento districts.

#### **Patrol Boat "Quinnat."**

The patrol boat "Quinnat" is a cruiser or raised deck type of boat, forty-six feet in length with a beam of eight feet and nine inches, and draws three feet two inches of water. She is a well equipped boat with a cabin which furnishes sleeping accommodations for four persons, a fully equipped galley, wardrobe, lockers and lavatory. She is finished in Philippine mahogany and is electric lighted throughout. When built in 1910 at a cost of \$6,500 she was equipped with a forty horsepower gasoline engine which enabled her to attain a speed of about twelve miles per hour. In 1919 it was found necessary to replace this old engine and a ninety horsepower Wisconsin engine was installed in its place. With this new engine she can make a speed of thirteen miles per hour. The boat has a fuel capacity of 240 gallons which gives it a fairly large cruising radius. A small house has been recently built at the forward end of the cockpit to protect the operator from the weather. This boat's regular crew consists of a captain and engineer but can accommodate two extra men when the emergency requires. Although in constant service since being built this boat has been given good care and is in an excellent state of preservation. She was designed for use on San Francisco Bay and for trips to the crab, rock cod and trawl fishing grounds outside, and to the fishing grounds in Monterey Bay. While she is an excellent boat and is doing the work for which she was built she is not as seaworthy in bad weather outside the heads as had been expected. With the growing importance of the outside fishing, more especially that at Monterey and Fort Bragg, it may be necessary at some time to replace her with a larger and more seaworthy boat.

#### **Patrol Boat "Steelhead."**

In 1920 the boat "Steelhead" was built to assist in the patrol work of San Francisco Bay. The "Barracuda" which had been doing this work was transferred to the river work to take the place of a boat which was being rented for the purpose.

The "Steelhead" is the type of boat used in salmon trolling at Monterey and Fort Bragg. She is thirty-one feet long, nine foot beam and draws thirty-two inches of water. She has a twelve horsepower Hicks two cylinder heavy duty engine and has a speed of nine miles per hour. She is decked in and has a house shelter over the engine and cockpit. The forward deck is slightly raised to give sleeping quarters for three men. There are fuel tanks for 100 gallons and a 20 gallon water tank. Her contract price was \$2,545. She can be operated by one man but can carry more when necessary.

In addition to work on San Francisco Bay it is intended to use the "Steelhead" at Monterey and Fort Bragg during the fishing seasons at those places and to engage in experimental fishing to develop methods of catching fish now little used.

#### **Patrol Launch "Albacore."**

For the patrol of southern California waters we have the boat "Albacore," built in 1918 and described in the last Biennial Report. She is sixty feet long, twelve foot beam and has a draft of five feet. She is equipped with a sixty-five horsepower Acme engine and has a speed of eleven miles per hour. An ample cabin is provided with sleeping accommodations for six persons, a fully equipped galley, a lavatory and lockers. She is built plainly on the model of a tuna fishing boat and is a good substantial seaworthy boat, well adapted to patrol and investigation work. With a crew of three, captain, engineer and deckhand, she covers the coast from Santa Barbara to San Diego.

The "Albacore" has been used a great deal in experimental "long line" fishing for albacore and has assisted in the fisheries investigation work. For more than a year, however, practically all of her time has been occupied with patrol work. With constant demands made upon her by the patrol work and with long distances to cover she has been put through a lot of hard work. We doubt if the log of any boat of its size on the coast will show as much work done.

#### **Other Patrol Work.**

Besides the fisheries patrol carried on by boat we employ a patrolman in the vicinity of San Pedro who works about the piers, fishing docks and part of the time on the patrol boat. As occasion has demanded extra men have been secured from the Los Angeles County sheriff's office.

At San Diego we have a patrolman who devotes about all of his time to the fisheries patrol work. At San Francisco one man gives this branch of the work all of his time. As already stated the three boats, "Rainbow," "Barracuda" and "Shad," while doing some game patrol work are largely employed on fisheries work. Game deputies wherever stationed in commercial fishing localities devote part of their time to fisheries work and during fishing seasons may give all their time under the direction of this department. In this way the fisheries patrol is well cared for.

#### **SALMON INVESTIGATIONS.**

In the salmon investigations this department is cooperating with the Department of Fishculture for each is equally concerned with the conservation of these fish. Investigations of California salmon which have been made in the past have in a large degree been superficial, but to

work out the important problems remaining unsolved requires well organized and sustained effort.

The chief object here is to acquaint ourselves as much as possible with the life and habits of the salmon, for intelligent attempts at conservation must depend largely on our knowledge of the natural history of the species. The fact that rapid depletion and almost total destruction of the supply of salmon has occurred in certain localities to the northward, is sufficient warning that the question of conservation must be considered by us even more seriously than in the past. In addition to a constantly increased effort to supply a growing demand for fish food, we are faced with the rapid development of irrigation and power construction, which in some instances completely closes or threatens to close large tributaries of our rivers which have served as natural breeding grounds for salmon. The recent growth of sea fishing for salmon also furnishes a problem for careful investigation. The main hope of being able to combat these destructive agencies lies in intelligently administered conservation and propagation.

Artificial propagation seems to have reached a high state of perfection, but there are many questions relating to methods of liberation, distribution and breeding of young salmon that need immediate attention. It is quite possible that some of our smaller coastal streams might be made through artificial propagation to contribute largely to the demands of sea fishing, and that with a little aid more or less permanent migrations might be established in some of them.

The salmon investigation work has been placed in charge of Dr. J. O. Snyder of Stanford University, who is exceptionally well qualified to carry on this line of work.

During the past two seasons assistants, under his direction, have been engaged in making observations at Monterey Bay, Fort Bragg, Klamath, Trinity, Smith and Sacramento rivers, and elsewhere. There have been assembled considerable data relating to sea fishing and river migration, collections of scales from which something of the life history of the fish may be obtained, collections of young salmon from different localities, etc. Laboratory studies of this material is now in progress. Attention has been directed principally toward king salmon, but observations of value have been made on silver salmon, steelheads, sturgeon, and other river fishes as well.

What is most urgently demanded now is some knowledge of the composition or source of origin of the schools of salmon upon which the sea fishing draws, of the movements, source of food, and other facts relating to the ocean life of salmon, of the location and extent of spawning grounds, the migrations of adults and young, and methods of introduc-

tion and distribution which will bring the best results to artificial propagation. Facts relating to these questions can only be gained through patient observation and carefully planned experimentation.

### FISH REDUCTION.

Wherever fisheries are carried on extensive waste usually results. Many unmarketable fishes are unavoidably caught and frequently even the desirable varieties are caught in such quantities they cannot be absorbed by the markets before spoiling. As an illustration, the mackerel boats fishing out of a port in England recently brought in so many mackerel in one day that the fresh markets and salteries would not take all of them and 500,000 perfectly good mackerel were taken to sea and dumped. Besides such losses resulting from occasional overcatches there is a loss of at least fifty per cent in the cleaning of fish which go to the markets, salteries or canneries. In many places this waste is dumped at sea and no effort is made to convert it into useful products such as fish meal and oil. It is evident that even in England where fishing has been carried on for centuries fish waste and offal is not being utilized as it should. In the salmon fisheries of the north Pacific, many millions of pounds of fish offal are annually dumped into the sea. The Council of Scientific and Industrial Research of Canada estimates that in that country \$12,000,000 worth of fish offal is wasted each year.

In California the demand for fish meal for poultry or stock food or as a fertilizer for fruit trees, and the demand for fish oil to be used in the manufacture of fruits and other products has resulted in almost every pound of fish waste being utilized. California easily surpasses all other states in the utilization of its fish waste. A few years ago when our fisheries began to expand, reduction plants were established at the principal fishing centers and the fish offal and waste was hauled to them by barge or truck. There was a demand for small, compact and sanitary reduction plants which could be run in connection with the cannery. After considerable experimenting these were finally perfected and several different makes were placed on the market by manufacturers in this state. Most of our fish canneries are now equipped with these plants and in them the fish offal is handled quickly before putrefication sets in and the fish meal thus manufactured is an excellent poultry or stock food.

The independent reduction plants which depended on fish offal for their supply of raw material have lost by this and some have had to close. Fish meal and oil have sold at such good prices and sardines can be caught so cheaply that there have been times when it was as profitable to convert the fish into meal and oil as into canned food. This resulted in large quantities of sardines being used in the reduction

plants in the spring of 1919 during the time when the fish were not quite up to the standard of fatness to can. Although it is considered proper to use the menhaden in vast quantities on our Atlantic coast for obtaining fish oil and the herring to a less extent in Norway for oil and meal, it was believed that the unrestricted use of sardines for this purpose should not be permitted in California. Our canners themselves as well as the public were opposed to the practice and the legislature, then in session, enacted a law which placed the regulation of the use of fish in reduction plants in the hands of the Fish and Game Commission. The first idea of the legislative committee which passed upon the bill was that the use of any edible fish in reduction plants should be prohibited, but adopted the plan of placing the control of the matter in the hands of the Fish and Game Commission when it was shown that frequently over-catches cannot be avoided, that fish hoisting apparatus or canning machinery will break and that consequently if the fish could not be used in reduction plants there would be a useless waste.

The handling of this problem has not been an easy one. Sardine canneries having reduction plants are making a profit out of their waste and this gives them an advantage over the other canneries. Further than this, they are able with profit to divert sardines for reduction purposes which have become soft underneath the load in the boat, or fish which are broken or do not otherwise come up to standard and by so doing they make use only of the fine fish for canning. The tendency, however, is for them to use more fish than they should for reduction purposes. The canneries which are not equipped for converting fish and offal into fish meal and oil have paid the fishermen more for their fish than they can get from the reduction plant which buys their offal. As a consequence, they are inclined to can some fish which might better be discarded and with only a few exceptions they pack more cases from a ton of fish than the canneries with reduction plants and they accuse their opponents with using good fish for fish meal and of using that profit to underbid them in the sale of the canned product.

It has been extremely difficult to regulate the percentage of fish that is discarded in this way, even when an inspector is placed in the cannery. Consequently a plan of checking a cannery's daily pack with the amount of fish it receives has been adopted. Their receipts are obtained accurately from the copies of the receipts issued to the fishermen and the daily pack is secured from the memoranda of retort or comptometer records from which the cannery makes up the record of its daily pack. By this means we are able to hold their waste in discarded fish and excess catches within definite limits.

In the matter of controlling excess catches of sardines our task has also been difficult for fishing conditions vary in one locality through a season and the fishing conditions in southern California are very

different from those at Monterey. At Monterey sardines are found in great numbers most of the season and are usually caught close to the canneries and within a comparatively small area. The boats most of the time are able to get their allotted limits and there is little incentive to make an over-catch with the expectation that other boats will not get their limit and on that account they will be able to sell the excess amount. Further than that, the boats are usually near enough together so that each knows what the catch of the other boats is. In southern California the boats fish mostly far from the canneries and scattered over a wide area so that they are not able to regulate the total catch. To insure the canneries running at capacity it is necessary that the limits which the canneries place on their boats be slightly in excess of the capacity of the cannery. We have found by experience that the excess allowed must, on account of the difference in fishing conditions, be greater in southern California than at Monterey. The percentage of leeway which is allowed therefore, is greater in southern California than at Monterey. The canners, almost without exception, are cooperating with us and are willingly permitting us to inspect their plants and the records of their pack.

The regulation of the use of fish in reduction plants we believe is working out quite satisfactorily and in accordance with the wishes of the legislature. Some of the canners without reduction plants and some of the plants not connected with canneries have not been wholly satisfied. But, from force of circumstances they are at a slight disadvantage and it is not natural that they should be entirely satisfied. On the other hand, some of the canners with reduction plants feel that we have been too severe with our regulations. The direct fishing for reduction purposes which caused the passage of the law has been entirely stopped and over-catches and waste has been reduced to a low percentage.

#### PURSE SEINE FISHING.

About the most important development in the fisheries during the past biennial period is the introduction of purse seine fishing in southern California and the capture by this means of large quantities of blue-fin tuna. The tuna canning industry has been supported by the fish known as the long-finned tuna or albacore which is caught only with hook and line. As already stated in discussing the tuna investigations, the catch of this species of fish until this year had been decreasing due, most likely, to a natural fluctuation in abundance and not to over-fishing. A few purse seines introduced in 1918, demonstrated that the other varieties of tuna may be caught with nets. In 1919 the number of purse seine boats increased, in the San Pedro district where

this manner of fishing is chiefly done, from nine to forty-one. These boats had a very profitable season, catching nearly eight million pounds of blue-fin tuna, thus making up the partial failure of the albacore catch. This resulted in a large tuna pack which the cannery of the district sorely needed. In 1920 the number of purse seine boats was increased to 103. The purse seine fishermen's association demanded a higher price than the cannery believed they could pay. The cannery maintained that \$125 per ton was the limit they could pay, and subsequent market conditions have shown that figure to be too high. When the fishermen finally decided to accept this price they were unable to find the blue-fin tuna in sufficient numbers to make their operations profitable. The result of the season was that some of the boats did not operate and scarcely a half dozen of them made their expenses. The albacore catch by the hook and line method, however, was very good and the cannery on that account did fairly well.

The presence of these purse seine boats, many of which have come from the Puget Sound salmon fisheries, is a source of worry to us. They have insisted on fishing within the prohibited area at Catalina Island when tuna were to be found there and have had little respect for the law which forbids their presence within that district with nets on their boats. Our southern patrol boat has had to make numerous arrests. A more serious result of the growth of purse seine fishing, however, is the ill effect it may have on such varieties of fish as the barracuda and white sea bass. These boats are engaged in fishing for tuna for only about three months, the rest of the year many of them fish for the markets. One of these boats is able in one haul of their net to take more barracuda or mackerel than they can carry on their boat. The markets which are not prepared to freeze and hold over large catches until the time when fish are not plentiful, are easily swamped, and it often happens that large quantities of these fish, caught in good faith for the markets, have to go to reduction plants. The fishermen have shown a willingness to cooperate with the Commission and at our request have at times put limits on the amount any boat shall bring in. The losses come, however, on days when, instead of only a few boats making catches, a large number of boats fishing over a wide area make good catches simultaneously. Provision should be made by the markets to freeze and hold these over-catches for there are times in the winter when the markets are practically bare of fish.

The worst feature of purse seine fishing, which cannot very well be remedied under existing laws, is the catching and killing of undersized and young barracuda and white sea bass. It is possible the catching of these two varieties of fish by means of purse nets should be prohibited.

**KELP POTASH INDUSTRY.**

At the time of our last Biennial Report the kelp beds of California were being taxed to their utmost to furnish potash, the supply of which was cut off from Europe by the war. When this source of supply was cut off potash manufactured from kelp sold readily for four times the pre-war price. About 400,000 tons of kelp were being cut annually and the government plant at Summerland and some of the larger companies were making every effort to develop and obtain a market for the by-products in order that the business might be carried on profitably even if the price of potash should fall to what it was before the war. We ventured the opinion at that time that some of the companies would be able to continue operations through the sale of the by-products which they were developing. But the end of the war came sooner than expected and was accompanied by a decided drop in the price of potash. Soon after the signing of the armistice nearly all kelp harvesting ceased for as yet a sufficient market had not been found for the by-products. At the immense, three million dollar plant of the Hercules Powder Company on San Diego Bay, where the fermentation process was used to break down the physical and chemical structure of the kelp, many by-products were developed, several of them being chemicals which had never before been produced in commercial quantities. It was hoped that use for these materials would be found in the industrial arts, but so far no good market has been found for them. The only plant which has continued to operate is the government experimental plant located at Summerland. Here they have continued to work on a small commercial scale and researches have been continued to discover more economical ways of extracting the potash and the different by-products. Here besides the potash salts such by-products as kelp-oils, creosote, pitch, ammonia, bleaching carbons, salt, and iodine have been obtained in commercial quantities. To quote from their last report: "The results obtained to date indicate that it will be possible to establish on kelp as a basic raw material a new American chemical industry of considerable size and of importance and usefulness to the nation." From the work which has been done we now know that the kelp beds of California are capable of yielding 500,000 tons of raw kelp annually without injury to the present stand. It is possible that this great industry may soon be partially revived, but at the present time it is at a standstill.

Respectfully submitted.

## REPORT OF THE BUREAU OF EDUCATION, PUBLICITY AND RESEARCH

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: We have the honor to submit herewith a report on the work and accomplishments of the Bureau of Education, Publicity and Research, covering the period from July 1, 1918, to June 30, 1920, this being the third report since the inception of this department. Although war conditions prevented an enlargement of the work, yet we believe meritorious accomplishments in the field of education and publicity have been achieved.

### EDUCATION AND PUBLICITY. LECTURES.

The Bureau has continued to emphasize work in the schools, consequently a large proportion of the lectures given during the past bien-nium have been delivered to high school and grammar school students. High school principals have been particularly sympathetic with the work, and in many instances return lectures have been requested. In some instances all the schools in a city have been concentrated for the purpose of hearing a lecture and seeing wild life films. It has been surprising to find how little definite information regarding the life history and habits of game birds and mammals is had by the average high school student. Furthermore, there is evident lack of information as to the present status of fish and game and the need for its conservation. As the lectures are often followed by a quiz, or the demand for a written paper, by the biology teacher, the results should prove very much worth while.

Early in 1920, the California Academy of Sciences was furnished with a series of four popular science lectures by employees of the Commission.

Another fruitful field which has been entered is that of the Boy Scouts of America. Many lectures have been given to groups of scout-masters and also to the boys themselves. In the summer of 1918 several boy scout summer camp groups were visited and instruction given by means of field trips and camp-fire talks.

The usual series of nine lectures on fish and game were given to a large class in general forestry at the University of California, in the spring of 1919 and again in 1920. Short field trips designed to give students a first hand acquaintance with the common birds on the campus, and to stimulate their interest in natural history were also given. The response of this group of students has been particularly gratifying. A series of lectures and field trips were also given to a group of prospective teachers in a course in advanced vertebrate zoology,

in the spring of 1919. We believe that we have been fortunate in having this opportunity to give a course of instruction to University students, for in such instruction, we are reaching many prospective teachers and many who will hold responsible positions in the state.

The lecture schedule would have been expanded had there not been the need for curtailing traveling expenses. Lectures have been distributed as follows:

High schools -----	20
Grammar schools -----	17
Normal schools -----	3
Universities and colleges -----	21
Parents' and teachers' associations -----	5
Civic clubs and public -----	59
Boy scouts -----	21
Churches -----	4
Miscellaneous -----	12
<b>Total -----</b>	<b>162</b>

There is still a considerable demand for a collection of study skins of common birds to be used as a loan collection for schools. Although such a collection has slowly been accumulating, it is not sufficiently complete to be available for this use. When completed this collection could be kept on the move with no expense to the Commission, each school paying the expressage. There is a continuous demand from teachers for helpful conservation literature and new material needs to be prepared.

Nature study libraries furnished by the California Nature Study League have been loaned to winter resorts and augmented libraries of reference books have been used in connection with the summer resort work.

#### MOTION PICTURES.

The set of Salisbury wild life films owned by the Commission have been in almost constant use. The films formed the basis of many lectures, and in addition have been displayed in many cities of the state. Not only do these films depict the home life of game birds and mammals but they also emphasize the need for fish and game conservation. Of particular use has been the reel showing the hatchery operations. The films have been furnished free of charge to schools or other organizations making application, providing that they furnished a lantern and operator. All of the high schools have recently been circularized, with the result that the films are being shown systematically in all of the high schools possessing the proper projecting apparatus. Three worn duplicate films have been given wide distribution through the state by the University Extension Division.

One reel has been added to the six Salisbury films. This one was secured by the Commission itself and shows the albacore and tuna fisheries of southern California. The reel shows the fishing grounds, the catching of the fish, shipment, and the processes of canning. Another reel showing the sardine industry is to be added in the near future. Two hundred feet of film showing sea lions on Anno Nuevo Island has also been secured.

A small collection of lantern slides of common birds and mammals has been loaned to the schools on several occasions.

#### PUBLICATIONS.

The continually increasing mailing list and the many letters received, lead us to believe that our quarterly CALIFORNIA FISH AND GAME is proving an educational force in the state. The magazine is now in its sixth volume. A glance at its editorials and the type of articles which appear should convince anyone that its aim is "conservation through education." On many occasions CALIFORNIA FISH AND GAME has been mentioned as the best publication of its kind in the United States. Outstanding among the numbers issued is that for July, 1919, which appeared as a "Trout Number." An article on "California trout" gave a description of the life history and habits of all the different varieties of trout found in the state, and this was illustrated with four beautifully colored plates. As was expected the demand far exceeded the supply. Volume Five (1919) contained 222 pages and 70 illustrations including 18 general articles and more than 220 shorter items.

Increased activity in the field of commercial fisheries is evidenced by the publication of two new fish bulletins which have been given wide circulation. A department in CALIFORNIA FISH AND GAME entitled "Notes from the State Fisheries Laboratory" has furnished published results of the activities of this laboratory.

A large part of the material appearing in the "Bird and Arbor Day Manual" issued by the State Superintendent of Public Instruction was furnished by this Bureau. This manual reaches all of the teachers of the state.

The 1916-1918 Biennial Report of the Commission, edited by this Bureau, although reduced in size and attractiveness for economy, nevertheless, furnished a complete record of the activities and accomplishments during the biennial period.

Mention should also be made of a work on the "Game Birds of California" published by the University of California Press, in December 1918, in which this Bureau had a distinct part, your director being a joint author. The book contains 642 pages, 16 colored plates and 94 line drawings and according to reviewers is the best work of its kind. Each of the 108 game birds of the state is described and introductory chapters are devoted to such subjects as: Decrease of Game and Its Causes; Natural Enemies of Game Birds; The Gun Club in California; History of Attempts to Introduce Nonnative Game Birds; The Propagation of Game Birds; Legislation Relating to Game Birds in California. Our office is now equipped with a mimeograph and an addressograph and as a result a long series of newspaper items have been sent to all the prominent newspapers of the state. At the top of the paper utilized is a heading which points out that the item is part of the free news service furnished by the California Fish and Game Commission, with a note addressed to the editor suggesting the purpose and value of the news service. It has been gratifying to note how regularly the newspapers print these items. A particularly well conducted campaign regarding the summer work was made possible by the California Nature Study League. It was estimated that 40,000,000 people were reached by this publicity.

#### EXHIBITS.

In the fall of 1918 and again in 1919 in connection with exhibits at the State Fair at Sacramento, the different publications of the Commission were exhibited, additions to the mailing list taken and a display of films made. In connection with the summer resort work, a wall rack displaying colored pictures of fish and game proved very useful. This Bureau also cooperated in a bird display shown in connection with the annual flower show given at the St. Francis Hotel, in San Francisco.

### SUMMER RESORT WORK.

The statement in our last report suggesting that the summer vacationist finds himself in close touch with nature, and is in a particularly susceptible mood to receive information on wild life, and that the vacation camps and mountain resorts of the state constitute a neglected opportunity for additional work, has been clearly demonstrated during the past two years. During the summer of 1919, the Tahoe resorts were chosen as a field for the work. Each resort around the Lake was invited to institute educational work relating to wild life. Five of the larger resorts having accepted our proposition, a campaign plan was outlined and extensive newspaper publicity given the project.

In order to avoid the appearance of a cut and dried education propaganda it seemed best to first of all stimulate people's interest in the out-of-doors and the wild things encountered on trips afield, and secondly, to furnish information on the status and needs of fish and game by means of illustrated lectures. There was offered, therefore, at each resort a series of field excursions designed to bring to each participant the ability to recognize and name birds, mammals, trees and insects encountered on the summer vacation. The classes were limited to twenty and the instructor led them along the mountain trails, pointing out the different kinds of plants and animals, and adding some item of interest regarding their life history, status and the need for conserving them. Special excursions were offered for children.

Great interest was shown in these trips afield. At Fallen Leaf the interest was so great that it was almost impossible to care for the crowds. In many instances duplicate excursions had to be made in order to limit the number of students. In all 42 separate field trips were conducted. The total attendance of adults was 362 and that in the children's classes, 157. The fact that many school teachers attended these trips emphasized the value of the work; for invariably these teachers will carry to their pupils the conservation messages given.

In the evenings a series of illustrated lectures was offered. The lectures were designed not only to be entertaining, but to carry facts valuable in developing public sentiment favorable to fish and game conservation. Among the subjects used were: The Fish and Fisheries of California; Game and Fur-Bearing Mammals of California; The Economic Value of Birds; Bird Migration; Methods of Wild Life Conservation; Wild Animal Life in California. Twenty-two lectures in all were given and the total attendance was 2,240. It can be seen, therefore, that the average attendance was more than 100. This is the more encouraging in that a series of lectures was advertised and the attendance continued good throughout each series.

The California Nature Study League became so much interested in this new work that they furnished a compact nature study library to be placed in each of the summer resorts where the work was instituted. This library was supplemented by colored pictures of fish and game and other illustrative material.

The work at Tahoe attracted the attention of the Superintendent of National Parks, Mr. Stephen T. Mather, and in 1920 he suggested that the Commission cooperate in similar work for Yosemite National Park. As a consequence, there was installed in the summer of 1920 in

FIG. 19. A Yosemite audience listening to a conservation lecture. Summer vacationists are in an unusually receptive mood for information on fish and game. Photograph by Curry Camping Company.

Yosemite National Park what was called a "Free Nature Guide Service." Illustrated lectures dealing with wild life and wild life conservation were given in the evenings at the different resorts, and trips afield were scheduled for morning and afternoon. Small nature study libraries were made available at two different places in the Valley, and an office hour gave visitors a chance to have questions relating to natural history properly answered. Considering that the effort was practically new and untried, the results were remarkable. During the month of June alone, the only part of the season covered in this report, 10,815 persons were reached through the medium of lectures, eighteen being given; and the attendance on the thirty-five scheduled trips afield was 483. Further

information on wild life was furnished by some "nature notes" which were run regularly on the back of the menus at Yosemite Lodge and the Sentinel Hotel.

On the field excursions it was not uncommon to come upon deer, bandtailed pigeons and mountain quail, thus giving a splendid opportunity to furnish information on the status of the game and the means whereby it may be conserved. Furthermore, it was possible to convince everyone of the efficacy of a game refuge, for the park itself clearly demonstrates the value of such a reserve.

It hardly seems necessary to emphasize that a larger number of persons were reached, and at a time when they were most ready to learn,

FIG. 20. Under the instruction of a nature guide in Yosemite Valley. Typical of the Fish and Game Commission's summer resort work. Although this particular group were not studying the deer shown in the upper left-hand corner, many opportunities for such a study were offered to similar groups. Photograph by H. C. Bryant.

than could have been reached in any other way. We are convinced that this work has been the most profitable of any educational work outlined by the Commission, which has been undertaken up to the present time. If we may judge by the enthusiasm of those who came in contact with the Nature Guide work in the Yosemite, there is every reason to believe that it will not only be continued in the Yosemite National Park, but that it will spread to the other national parks of our country. If this proves to be true, it will be to the everlasting credit of the Commission that it was largely responsible for the beginning of so important a project connected with the recreation and education of the people.

## RESEARCH.

## Ducks versus Rice.

There has been no more important problem confronting the Commission during the past biennium than that relating to ducks and the rice grower. In the fall of 1918 misleading news items led farmers to believe the rice industry was threatened due to the depredations of ducks, and the sportsmen to believe that ducks were being slaughtered by rice growers in the Sacramento Valley in order to save the crops. In cooperation with the United States Biological Survey, an investigation was made to determine the real damage caused by the ducks and to determine also, some solution for the problem which had become an intense one. Investigation showed:

(1) The consensus of opinion of rice growers obtained through interviews was that owners should legally be allowed to protect crops but the unrestricted hunting would cause more damage to the rice than the ducks. Much of the agitation was started by townspeople who wanted a chance to hunt before the season opened.

(2) Damage to rice caused by ducks is limited in extent, hundreds of growers never having sustained loss. The greatest damage in 1918 was found between Maxwell and Colusa, in Colusa County.

(3) Thin rice or rice with open water is most often attacked by ducks.

(4) The total acreage of growing rice destroyed in 1918 amounted to not more than 300 acres out of 145,000 planted in the Sacramento Valley.

(5) The pintail duck is the only duck causing appreciable damage.

(6) Such suggested methods as an earlier open season and market hunting must be branded as impractical methods of solving the problem.

(7) Such control measures as herding and bombing have been proved feasible and should be depended upon. Intelligent growers can outwit the ducks if they make the attempt.

The misuse of permits which were first granted led to a rescinding of all permits and to concentration on the use of bombs and fireworks for frightening birds from the fields.

As a consequence of the attitude taken by the government, agitation has practically ceased, for those largely responsible for the disturbance have become discouraged because they are unable to shoot before the season is open, while those few rice growers in need of protection have been able to successfully frighten the ducks from the fields by use of bombs and more recently by use of a carbide automatic gun.

## OTHER INVESTIGATIONS.

In December, 1919, an investigation was made of the fisheries and bird life of Salton Sea, in Imperial County. Some valuable data on the history and status of the mullet fishery, which has recently become important, was obtained as well as data on wintering wild fowl and damage to winter grain crops by ducks.

Considerable progress has been made in the examination of duck stomachs with the idea of publishing an article on the food habits of ducks in California. Most of the material now on hand has been gone over, and a full report is now in preparation.

A cursory study of the fur-bearing mammals of the state and estimates of the annual take have been prepared. This data has now been turned over to the Museum of Vertebrate Zoology, of the University of California, where Mr. Joseph Dixon is undertaking the preparation of a

FIG. 21. Wild pintail ducks being fed on the lawns surrounding Lake Merritt, Oakland, California's first game refuge. Photograph by H. C. Bryant, January 6, 1919.

full report illustrated with colored plates by America's foremost artists. It is expected that at least three years work will be required before the results of the investigation will be ready for publication.

A list of all of the publications of the Commission together with a finding index has been prepared and is now ready for publication. A history of the Fish and Game Commission is also being compiled.

In addition to the work outlined above there has been the routine work of estimating the annual deer kill, and the study and filing of the reports made to the Commission by forest officers. The latter contain much valuable data relative to the status of fish and game.

The holders of scientific collectors' permits now number about 140, nearly a third of whom are collecting for museums and schools. Each is required to make a full report to the Commission of their activities for the year. Permits are issued only to those competent to exercise the

privilege for the advancement of knowledge. Accordingly, much valuable ornithological and mammalogical work is being accomplished by the scientific collector in this state.

#### CONCLUSION.

That this Bureau is reaching the public with increasing success is evident from the fact that the persons reached through the medium of lectures total 36,555, through trips afield, 1,308 and through motion picture displays 11,945, making a total of 49,808, in addition to the thousands reached through the medium of the printed word.

Respectfully submitted.

---

#### REPORT OF THE LEGAL DEPARTMENT.

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: I herewith submit to you a report of the work performed by the Legal Department for the two years ending June 30, 1920. Most of the work of this department is in conjunction with the other departments with the exception of the prosecution of violators; therefore, much detail is eliminated for the reason that it would simply be a repetition of the statements found in the reports of the various departments.

During this biennial period 1891 arrests were made of which number 1707 were convicted, 150 dismissed or acquitted and 34 cases still pending.

The amount collected in fines was \$46,373 and the number of days imprisonment imposed on violators was 324.

The number of arrests for this biennial period shows a slight increase over the former report but the aggregate in fines imposed and collected has increased almost 50 per cent, while the jail sentences imposed show a marked decrease over the same period. This decrease in jail sentences is no doubt due to the fact that probation law has had much to do with the reluctance with which judges impose jail sentences on almost all malefactors.

The district attorneys throughout the state, with but few exceptions, have cooperated with the Commission and have rendered valuable assistance in the prosecution of violators, and the justices of the peace, as shown by the amount of fines collected, are imposing heavier sentences for violations of the fish and game laws.

The past two years has shown a marked increase in the number of convictions had where jury trials were demanded by defendants, particularly in the few counties where formerly a conviction could scarcely, if ever, be had against a game violator.

In these sparsely settled counties the residents felt the game belonged to them and they could kill it at all seasons of the year, but the work of the Commission along educational lines and the vigorous prosecution of violators has been the means of teaching the people the value of the game as a natural resource, as well as that all violators will be vigorously prosecuted irrespective of the result of a trial; as a consequence there is scarcely a county in which a conviction cannot be had by jury where the evidence warrants.

Much work has been done in the enforcement of the screen and ladder law, and many of these devices have been installed. Surveys are being made and hearings held where demanded. But the greatest difficulty is in compelling ditch owners to maintain the screens after they are once installed, for in many instances the ditch owners take the screens out to clean the ditches and fail to return them until prosecution is threatened or begun.

The appropriation of the river waters of the State of California for irrigation and power purposes and the erection of large dams for impounding purposes has become a serious menace to the run of fish unless laws are enacted or means can be adopted whereby the corporations taking the water from these rivers can be compelled to permit sufficient water to pass down the natural channel of the rivers, in question, at all times sufficient to sustain fish life, the run of fish will be ultimately exterminated and that shortly.

The Anderson-Cottonwood Irrigation District has constructed a dam on the Sacramento River above Redding that prevents the free passage of fish and is interfering with the salmon run. A notice was served on the district to construct a fishway on the dam, but so far the order has been ignored and proceedings are about to be begun to compel the district to install the fishway. The District Attorney of Shasta County has been requested by this Commission and the United States Bureau of Fisheries to begin an action against the district to compel an installation of the fishway, for under the law as it now stands the District Attorney is the officer whose duty it is to bring an action to abate this nuisance and prevent the destruction of one of the most valuable run of salmon in California.

A case was prosecuted against the Red River Lumber Company at Westwood, Lassen County, for the pollution by sawdust of Robbers Creek, a tributary of the Feather River, and a conviction had in the Superior Court of Lassen County. The creek ran through the mill

grounds. After the conviction, the company diverted the entire stream around the mill and away from the source of pollution.

In the month of December 1919 the Engels Copper Mining Company in Plumas County was tried and an information filed against it for the pollution of Hights Creek by depositing the refuse from its mill into the creek. The case was tried before J. O. Moncur without a jury, the evidence showed that the stream for a distance of over five miles from the plant was polluted to the extent that practically all fish life had been destroyed, yet notwithstanding the testimony the case was dismissed. This was one of the worst cases of pollution of public waters of the state with which this Commission has had to deal.

The most important decisions rendered on the subject of fish and game during this biennial period was in the case of Suttori vs. Peckham et al. by the District Court of Appeal. Suttori was arrested for using a net in Fish and Game District No. 20 in violation of Section 636, Penal Code, and brought an action in conversion against Justice of the Peace Peckham et al. for the fish seized by the officer in making the arrest. The plaintiff contended that the law was unconstitutional in that the state had no jurisdiction over the waters surrounding Santa Catalina Island and the court in deciding the case held that the "state has jurisdiction a marine league at sea in all directions from the shore of the island in question." This decision determines the right of the legislature to pass laws for the protection of fish not only within the three mile limit of the state but also within the three mile limit of all islands adjacent thereto.

Working under a written agreement, the United States Forest Service has cooperated with the Fish and Game Commission in the enforcement of fish and game laws in the forest reserves.

Since the last biennial report the Government of the United States under a treaty with Great Britain for the protection of migratory birds of United States and Canada has taken over the protection of migratory birds and placed them under the Department of Agriculture. By an act of congress, the Secretary of Agriculture is authorized to make regulations for seasons when such birds may be lawfully killed, taken and possessed, and has conferred upon the several states the right to pass laws not inconsistent with the regulations of the Department of Agriculture and to enforce the same. Under the regulations of the Department of Agriculture the sale of migratory birds is prohibited. This regulation has done much to prevent the unlawful traffic in game and has practically eliminated the market hunter who knew neither bag limit nor season.

Respectfully submitted.

(Signed) ROBERT D. DUKE,  
*Attorney.*

## REPORT OF THE DEPARTMENT OF WATER POLLUTION.

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: There has been much less pollution of state waters during the last two years than in like periods in the past. This is probably due to the following reasons:

*First*—The larger firms and corporations have been convinced that much, if not most, of the (so called) "waste" is of value either in its original state or, at small cost, turned into a by-product. Thus the Standard Oil Company of California recovers both acid and asphaltum from the "sludge" from the lubricating stills (which was formerly discarded as worthless), and makes a fair profit on the investment and labor.

The Mason By-Products Company, (formerly the Mason Malt Whiskey and Distilling Company), has found a greater profit in its "waste" than in its alcohol.

The gas companies, realizing the immense value of lampblack and tar as a fuel, would gladly recover the amount, which in past years was dumped into the bay, if it were possible and thus effect a still more material saving in their oil bill. It may be well to state, in this connection, that the "Jones" generators (used in nearly all of the Pacific Gas and Electric gas plants and in most of the other plants manufacturing more than a million feet per day), produce the required quality of gas with about one-third of the amount of lampblack formerly resulting.

*Second*—The enormously increased cost of petroleum, both in crude and refined forms, has forced both manufacturers and consumers to utilize every possible means to prevent leakage and recover all oil which has escaped as the result of unavoidable accidents. Thus, firms which installed separating boxes, filters and other means of retaining oil "waste" at our request or to avoid prosecution, now find that these improvements have more than paid for themselves in saving of oil.

Examples of the foregoing are the Doheney Pacific and Associated Oil Companies at Casmalia, Santa Barbara County, against whom complaints were filed charging pollution. They have expended about thirty thousand dollars in the purchase and improvement of a tract of land adjoining their property and it is now an enormous settling basin with its own pumping plant, pipes, ditches and tanks. The pollution has ceased and the saving will soon pay for the work. The Southern Pacific Company has constructed a concrete wall, or dike, in the Sacramento River at Dunsmuir, at a cost in excess of twenty thousand dollars, which retains and permits the recovery of the oil which has

been seeping out of the yards for several years past. I have been unable to get figures on the actual amount of oil thus recovered but it must be considerable.

There is still some complaint about "tankers" pumping ballast outside the entrance of San Luis Bay but this practice has evidently ceased in the vicinity of the Farallones and San Francisco lightship.

A concrete separator has been constructed by the Union Oil Company at Avila to recover the oil leakage from the "topping" plant and the Pacific Gas and Electric Company have done likewise at Vallejo to retain lampblack.

Prohibition has, temporarily at least, aided the cause by eliminating the winery and distillery, both of which were sources of pollution particularly deadly to fish.

There are treble the number of small concerns using fuel oil than existed prior to 1918, all of which require frequent inspection. Small leaks may amount to nothing individually but the aggregate may run into barrels.

Respectfully submitted.

## REPORT OF SAN FRANCISCO DISTRICT.

*The Honorable Board of Fish and Game Commissioners for the State of California.*

SIRS: We herewith submit a report for the San Francisco District covering the period from July 1, 1918 to June 30, 1920.

### PERSONNEL.

The Fish and Game Commission has been particularly fortunate in retaining practically all of its employees during the strenuous times of the past several years. Although many employees obeyed the call to arms, they all returned safely at the close of the war. The higher wages paid in other lines of work proved attractive to only a few. For the most part their interest and loyalty held them even though it meant financial loss.

### GAME CONDITIONS.

On account of the dry season the duck and goose shooting has not been as good as usual. The only part of the state where waterfowl were found in normal numbers was the Sacramento Valley. In the San Joaquin Valley there was practically no loafing water and for the most

part birds were scarce. In the Suisun district shooting held up very well on certain grounds, but was indifferent on others. In the Bay region shooting was good in the 1918-19 season, but in the 1919-20 season there were far less birds.

It is probable that the early flights of birds on account of the scarcity of open water went on through the state without stopping. With the return of normal winters good hunting should be had in all the duck districts.

While the dry seasons have not been favorable for waterfowl they have been excellent for quail. This with the late opening of the season, the middle of November, has given the birds an opportunity to keep ahead of the hunters and throughout the Coast district there has been a notable increase. It is apparent that with favorable breeding seasons and the continuance of the present law it will not be necessary to put further restrictions in force in order to maintain a constant supply of quail.

Doves have increased in all parts of the state on account of the fact that the law protects them during the greater part of the nesting season. In certain sections nesting birds are found even later than the first of September, but in most parts of the state the young are out of the nest and very well able to take care of themselves by that date. With the present open season doves should increase as they are rather prolific breeders and can stand a considerable drain.

Mountain quail have increased very well both in the coast and the Sierra regions. The mountain quail is one of the most interesting birds in our state. Its cousin, the valley quail, will breed from sea level to an elevation of over 7,000 feet, but the mountain quail in most of the state practically never breeds below 2,000 feet except in the north coast district. Just why this is so is one of the mysteries of nature. From the human point of view there is no reason why congenial conditions could not be found at a lower elevation. Food is abundant and the temperature is not altogether different.

The abundance of mountain quail depends more upon the mildness of the winters than on hunting. A cold winter, with heavy snowfall, sometimes wipes out entire coveys. The season for hunting mountain quail in the Sierra districts, opens somewhat early. The young birds have not fully developed by September 1st and should not be killed.

Grouse are still commonly found in the pine belt but are not abundant. The chief factor in preventing them from becoming more common is the grazing of sheep in their breeding range. Many nests are destroyed by the sheep.

Three species of game make California most attractive to the sportsman—ducks, quail and deer. It is difficult to estimate the number of

hunters that go after deer during the open season, but it is safe to say there are not less than 50,000. That there are deer for these men to hunt is due to the fact that California is a natural deer state. There is an abundance of wild brush-covered lands and we also have had laws that gave protection and were enforced. In 1905, the present law allowing the killing of two bucks per season was passed. Previous to that time the limit had been three. Since 1905, the population of the state has increased by approximately one million. Naturally the hunters have increased and the facilities for getting into the deer country have increased more than 100 per cent, with the development of the automobile. During this time the deer cover has been greatly reduced and the deer are having more and more difficulty in keeping out of the way of the hunters. It is extremely probable that within a very short time a one-buck law will have to be put in force.

There is still an impression among sportsmen that it would be well to allow the killing of deer of both sexes. The old story of too many barren does is the excuse. There are men who claim that they can tell a barren doe by the color of the hair, and from other characteristics. We have never met a man who on sight could tell a barren domestic animal, animals with which we are most familiar. How anyone can claim ability to tell from the fleeting glimpse that they may have of the deer that the animal is barren, is beyond understanding. It is certain that any law allowing the killing of does would be the one big step toward extermination. New York state recently had an experience from which every state in the Union can take lesson. Under extreme pressure the legislature was induced to change the law so as to allow the killing of one deer of either sex. This law remained in effect for one season and it has been shown that out of an estimated number of 50,000 deer in that state, more than 20,000 were killed, and 13,000 of these were does. Fully one-half of the breeding stock wiped out in a single season. Think what would happen in California during two seasons. It is certain that no quicker way could be devised to exterminate the deer than by legalizing the killing of does.

#### ANGLING CONDITIONS.

The several dry seasons have raised havoc with trout fishing throughout the State. In the Coast region many streams that ordinarily carry a heavy flow of water were reduced to a mere trickle. In others there was no flow at all. The scant rainfall has also made it exceedingly difficult to obtain the usual number of eggs. This has greatly reduced the output of our hatcheries. With the return to normal rainfall it will be necessary for the hatchery department to work overtime in order

FIG. 22. Mr. Jay Bruce, state lion hunter, and his dogs, Ely and Ranger, with a male mountain lion killed six miles east of Zaca Lake, San Rafael Mountains, Santa Barbara County, January, 1920. Photograph by Wm. A. Magee.

to make up the loss. The public can rest assured that every effort will be made to bring back the streams to normal conditions.

On account of the greater number of fishermen it will be necessary to shorten the open season on trout so that the fry will have a better chance to develop. The season at present, when the great number of fishermen is considered, is entirely too long. The young fish that are planted from year to year are caught out almost as fast as they are put in. Under such conditions it is impossible to build up a stream. The only remedy is to shorten the season so that the young fish will have some chance to get by the first season at least.

Many years ago black bass were brought from the East by the Commission and planted in various parts of the State. Nearly 30 years ago one of these plants was made in Clear Lake, in Lake County. Bass have increased so that we now have good fishing practically throughout the State. Nowhere, however, is fishing better than in Clear Lake. As yet it is not commonly known to the fishing fraternity that fish weighing nearly ten pounds are frequently taken. Bass fishing in Clear Lake is better in the spring and early fall than at other seasons of the year when the fish are in deeper water.

During the past two years trappers of fur-bearing animals have secured excellent prices for their furs. The good prices have stimulated trapping so that many more trappers have been working. This heavy trapping has of course reduced the number of fur-bearing animals and it is more essential than ever that those that are left be protected at the season of the year when the fur is of small value. A statement made in Bulletin No. 1165 of the United States Department of Agriculture is very pertinent:

"American trappers receive yearly in the aggregate many millions of dollars for their fur harvest which up to the moment they set out to gather it, does not cost them a single effort. Recently, the supply of peltries has been decreasing at an alarming rate. Raw-fur buyers representing all parts of the country place the decrease at from 25 to 50 per cent during the last 10 years. There are no longer any virgin trapping grounds. Even in Alaska the two most important fur-bearing animals, the beaver and the marten, have become so nearly exterminated that they are now being protected by a closed period.

"Laws protecting fur-bearing animals are designed to keep a steady flow of peltries coming to market year after year, thereby bringing trappers a reliable income and giving regular employment to thousands of people engaged in dressing skins, manufacturing garments, and distributing them through the various avenues of trade.

"A general protest comes from raw-fur buyers against traffic in unprime skins. The losses caused by killing fur animals when their pelts are not prime are enormous. An educational campaign is greatly needed to prevent this waste and to perpetuate our fur-producing resources."

It is commonly believed by hunters and others that the fur-bearing animals feed primarily upon game and that these animals are responsible for the scarcity of game. Such, however, is not the case. Years ago, when game was more abundant than today, all fur bearers were also more abundant. The quail and other game knew how to hide their nests and to protect their young and themselves from those animals with which they were familiar. As soon as the human equation came in, then the game began to lose out. At first the muzzle loading gun was used, then as game became scarcer and more difficult to secure, the breech-loading gun, and at present the automatic, first with five shells and now in the duck regions with nine. Why not put the blame for the scarcity of game where it belongs and not hold the fur-bearing animals responsible? The natural food of the fur animals consists of small rodents, rats, mice, gophers, ground squirrels, etc. Of these we have more than an abundance in California. Of native species and subspecies there are 7 moles, 17 shrews, 73 mice, 39 rats, 16 ground squirrels, 19 gophers, besides the common domesticated rats and mice, a total of 175 species. Mice and rats are most prolific breeders. Seaton, in "Life History of Northern Animals", in referring to the breeding capacity of the meadow mice, says:

"To breed like rabbits is an old measure of fecundity, but those who established the standard were not fully acquainted with the Microtinae. These mice can marry, multiply and raise to independent age a whole family before the rabbits get much beyond the period of gestation. They begin in the early spring or even late winter, and seldom stop before snowfall. Meanwhile the young of the first breeds are at work in assisting the noble work of multiplying the race, supplying further toilers for the task of converting a world of vegetable matter into a world of sublimate flesh and blood, for the service and subsistence of the vast tribe of mouse-parasites known as birds and beasts of prey \* \* \* "An animal which multiplies itself by six every six weeks would in six years possess the earth and more than fill its possession if something were not done about it. The voles (meadow mice) are very near such rate of increase. Fortunately there are numberless able reducers of the vole population eager to do their very excellent best but these do not any more than strike a balance. If they relax their efforts or fail in the least, the mouse millions break forth in devastating hordes."

The fact that destructive rodents are held in control by the fur bearers should not be lost sight of, as without doubt if mice and other rodents should be allowed to multiply without check, California as an agricultural and horticultural state would be a thing of the past.

Respectfully submitted.

(Signed) J. S. HUNTER,  
*Assistant Executive Officer.*

## REPORT OF THE SACRAMENTO DISTRICT.

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: We submit herewith a brief report of the work and accomplishments of the Northern or Sacramento District which has supervision over a land area of approximately 39,107 square miles, or only 1378 square miles less than the area of the combined states of Massachusetts, Delaware, New Jersey, Vermont and Maine. Fifteen of the state's deputies work out of this office.

As much of the best shooting grounds for waterfowl and the best deer country is found within this district, the enforcement of law occupies an important place in our duties.

## MARKET HUNTING STOPPED.

Market hunting in the Sacramento Valley has been reduced to a minimum. No doubt there is some traffic in ducks and other game, and while there is game, always will be more or less. Several convictions in the Federal Court for violations of the Migratory Bird Treaty Act broke the back of the "Colusa ground sluicers" with their double automatics. These guns carry ten leads that can be shot in six seconds. It is the

FIG. 23. Ducks (310 in all) confiscated from two market hunters near Colusa, Colusa County, in 1919. Market hunting in California is now a thing of the past.

custom for three or four of these hunters to sneak along on the ground in approaching ducks and geese and then turn loose the bombardment.

The difficulty of detecting sale transactions is evidenced by the following facts: One of the most notorious hunters maintained a joint in Colusa where ducks were dispensed after the password had been given. So notorious had the place become for the distribution of ducks that traveling men had no difficulty in purchasing them at any time. It was the custom of these men to keep a supply of ducks on hand in order that they might guarantee the limit to so-called city "sportsmen" whom these hunters took out at so much per day. The surplus ducks were shipped to San Francisco and Sacramento under fictitious names to be distributed by agents.

The proprietor of this joint, with three other well-known market hunters, was detected on October 15, 1918, the day previous to the opening of the season, with 226 ducks and one snipe in his possession. Information was filed against these four defendants, Charles Guernsey, J. T. Maley, Frank Chambers, and Joe P. Meyers. They were indicted by the Federal Grand Jury and were tried by jury on February 4, 1919, at Sacramento, Judge Van Fleet presiding. The jury returned a verdict of guilty in eleven minutes, and the defendants were sentenced to pay \$100 each or in default serve 60 days in jail.

Much credit is due state and federal wardens Carpenter and Ludlum, Deputy United States Game Warden E. S. Catron and Assistant United States Attorney Johnson for the manner in which the case was handled. As this was the first case in California under the Migratory Bird Treaty Act, Judge Van Fleet did not impose a maximum fine, but warned all future offenders to beware.

The conviction of these men had a very beneficial effect. Should the legislature put the ban on the possession of this murderous weapon it will eradicate this class of market hunter, who is the twin of the "bull hunter" and will not take a sporting chance with other weapons.

#### DUCKS VERSUS RICE.

The difficult problem confronting the Fish and Game Commission regarding the alleged necessity of killing ducks in the rice fields, where it was claimed they were destroying rice, is about solved. United States Biological Survey has now assumed control and custody of the migratory waterfowl, and in order to cooperate with the rice growers in affording protection to their crops has appointed a resident United States Game Warden, Mr. C. F. Heuser. Stationed at Sacramento, Mr. Heuser is in a position to investigate all complaints. When damage by ducks is found efforts are made to frighten them from the fields by means of the automatic flash gun or lantern, the use of bombs, and black

powder without shot. All of these protective methods are proving very satisfactory if used intelligently and with the full purpose of obtaining relief. Because of the success attained the warden is receiving the cooperation of many rice growers in protecting both the rice and the waterfowl until the open season established by the government.

California could most effectively rid herself of the rice and duck problem by asking the United States Department of Agriculture, and the California State Legislature to fix an open season to conform with both Oregon and Nevada, where the season is October 1 to January 15. This would permit the rice growers to legally protect their crops where it might be found necessary. It would also allow the residents of the extreme Northern California counties to kill some waterfowl before these birds leave on their southern migrations. These residents claim, and justly so, that they are discriminated against, as by the time of our existing open season the waterfowl have nearly all left for the lower valleys.

#### RIVER PATROL.

The launch patrol on the Sacramento and San Joaquin rivers and tributaries is most efficient. With the addition of the fast cruiser "Rainbow," whose speed is twenty-six miles an hour, the patrol is able to more than double its cruising radius. The phenomenal run of striped bass in the Sacramento and San Joaquin rivers during the closed season for nets demonstrated that few, if any, nets have been used during the closed season.

#### STATE FAIR EXHIBIT.

The Fish and Game Commission's exhibit at the State Fair at Sacramento, August 30 to September 9, 1919, was the most pretentious yet attempted and proved to be the biggest attraction at the fair. A capable engineer was retained to draw the plans and Mr. Wm. F. Dabelstein, an artist of San Francisco, executed them. The whole north end of the new Agricultural Building was given over to the exhibit. The main feature of the exhibit was a cyclorama of the Sierra with Mounts Shasta, Lassen and Whitney looming up in the background and in the foreground the south end of Lake Tahoe at one end and a miniature of the Mount Whitney Hatchery at the other. Several miniature waterfalls tumbled down the rocks into an artificial lake filled with trout. The whole scene was made still more attractive by a system of lighting which successively showed the gray light of dawn, the rosy tints of sunrise and the light of full day.

Arranged in front of the panorama were four large aquaria. Two of them showed common introduced fish such as black and striped bass, bluegilled sunfish, crappie and catfish, a third showed different varieties

of trout and a fourth was filled with the famous golden trout of the Mount Whitney region. Great interest was shown in the golden trout, and no wonder, for their bright colors would attract anyone. The hardiness of this variety of trout was evidenced by their vigorous good health while in the aquarium. Not a fish was lost in transit, nor did one die during the ten days duration of the fair.

The publications of the Commission were on display and wild life films were shown in the motion picture theater twice daily.

The exhibit was remodeled and improved for the 1920 fair. The observation platform was moved farther away, additional foothills were added and a miniature electric train, with bridges and tunnels, was installed and better lighting effects supplied. Of particular interest this year were the added cloud effects. While changing colors which lighted the mountains showed the change from day to night, clouds swept across the sky and later the stars appeared. This was followed by the rosy tints of morning.

Visitors to the fair unhesitatingly stated that this exhibit was not only the finest exhibit on the fair grounds but the finest ever shown in the West, even exceeding any of those shown at the Panama-Pacific Exposition.

As in previous years there was a splendid aquarium display of food and game fishes, including a splendid exhibit of introduced fishes of valley streams and the famous golden trout.

#### **TAHOE FREE CAMP GROUND.**

The Legislature at its last session set aside the old hatchery grounds at Tahoe City, which were to be abandoned for a better site, as a public camp for vacationists. Under the direction of the Fish and Game Commission the State Engineering Department installed a water supply, sewer system and other sanitary conveniences. The camp was opened to the public on July 4, 1919, with Mr. Arnold D. Patterson as superintendent. On the first day over a hundred campers were cared for. The camp remained open until September 5. During the season 1239 persons registered, but this number does not represent the total number accommodated.

In the summer of 1920 the attendance was not as large as the previous season, considering the length of time the camp was open, which was no doubt due to the shortage of gasoline.

Among the added attractions this season was a profusion of beautiful flowers bordering the drive and walks. Camp closets, or cupboards, were also installed in each camping spot, where campers could keep their supplies.

There were visitors from every state in the United States, and every county in California. Every one of the 1396 guests voted that it was

the best equipped and managed free camp in the state and many letters of commendation of the management have been received. The expenses of operation of the camp are maintained by the hunting and angling license fund.

#### SUMMARY OF GAME CONDITIONS.

##### **Game Fishes.**

The drought has had a most detrimental effect on game fishes, especially trout. Many of the mountain streams went entirely dry in early July and August, streams that in the history of the state were never known to be absolutely dry. We believe the open season is entirely too long. If the present demand upon our streams continues to expand and no provision is made to meet that demand either by reducing the length of the open season or the bag limit, it will be but a few years until our smaller streams are entirely depleted except by the small fry annually planted. A large amount of fish reclamation will be necessary this fall, both in the valley and mountains.

The fishes introduced by our Commission from other states, such as striped and black bass, crappie and sunfishes, are now widely distributed and furnish an abundance of sport and food for the population of the valleys and interior. The striped bass have penetrated into the upper Sacramento and San Joaquin rivers and their tributaries, and in their seasonal runs furnish sport and food for many anglers on week-end outings, who otherwise cannot take annual vacations elsewhere.

##### **Deer.**

Every county in the district contains deer in some numbers. Many are killed within a few miles of the Capital City. There has been a most phenomenal increase in the last years of this splendid game animal. The Hayfork Valley lookout from his ranger station counted 170 deer on July 31. The Bally Mountain lookout reported having counted 1170 deer during the month of July. The relentless war waged by our Commission on the mountain lion, and the increase in the warden service, which has reduced the winter killing, is no doubt partly responsible for this wonderful increase. Especially is this true in connection with the Lava Bed country of Modoc County, where mule deer abound.

##### **Mountain Quail.**

Mountain quail have also shown a wonderful increase since our last report, probably due to the very limited fall of snow in the last few years in the areas in which these birds winter, and the vigilance of the district wardens. In 1915 and 1916, this species was all but destroyed by freezing and starvation in the counties of Shasta, Tehama, Lassen,

Modoc and Plumas. The remnant which survived were fed by our wardens. Happily they have now increased in their former numbers.

#### **Valley Quail.**

Reclamation is diminishing the area where quail find food and shelter and consequently they are perhaps decreasing, except in localities where they are protected at all times by the vineyardist or orchardist, or where they are not subjected to intensive hunting. However, this grand bird is reported by our district wardens as being fairly numerous.

#### **Doves.**

After the United States Department of Agriculture assumed control of migratory birds and established an open season for shooting doves commencing September 1, dove shooters predicted it would practically bar them from shooting this bird. However, this has not proven true. Doves were noticeably plentiful in the Northern District on September 1. Many limit bags were made on fully grown, strong flying birds. If this season prevails for a few years, allowing doves to rear their full quota of young, they will be as abundant in September and October as they are in July and August.

#### **Grouse, Sage hens.**

These birds likewise have benefitted by the minimum of snowfall for the last few years, and are reported fairly numerous in some districts. In Lassen and Modoc Counties, sage hens are notably abundant. It is to be regretted that the California law on these birds does not conform with the Oregon and Nevada laws, which place the open season from July 15 to August 15. By this date the birds become so strong with sage, which renders them not fit for table use, that California residents feel they are discriminated against and consequently blame the Commission.

#### **Ducks, Geese.**

The last three or four years of drought in California have been of inestimable benefit to wild waterfowl, inasmuch as the lack of water in the usually overflowed areas of the great San Joaquin and Sacramento valleys has driven these birds to the extreme southern portion of the United States and Mexico, where water conditions were more favorable and where these birds are immune from the great army of California hunters.

#### **Fur-bearing Mammals.**

The business of trapping fur-bearing mammals has grown by leaps and bounds in this district. The law protecting them until the furs are

FIG. 24. Alex Reichel, a trapper, with his take of furs caught in Trinity County, in February, 1920. These furs sold for \$178. From left to right the furs are ring-tailed cat, raccoon, fisher, raccoon, river otter, raccoon, fisher, raccoon, ring-tailed cat.

at their best is most strictly observed and is very popular with the man who traps for profit.

The Sacramento Division makes grateful acknowledgment of the splendid service rendered by officers of the several National Forests in this district. They have capably and efficiently assisted our wardens and cooperated in enforcing the fish and game laws. Grateful acknowledgment is also made of services of the deputies of the Sacramento Division and of their loyalty, efficiency and hearty coop-

eration so readily given to their office and to their fellow wardens. No hardship is avoided, no day or night is too long, and no dangerous detail is shirked in the performance of duty.

Respectfully submitted.

*Assistant in Charge.*

## REPORT OF THE LOS ANGELES DISTRICT.

*The Honorable Board of Fish and Game Commissioners of the State of California.*

SIRS: We are pleased to present the following report of Southern Division activities in the cause of fish and game conservation during the biennial period closing June 30, 1920.

Our policy during the last two years has been one of steadily increasing and ever more detailed frankness with our masters, the public. It has been dictated with particular reference to the sportsmen and commercial fisheries interests, which jointly finance our work through their contribution of licenses and other special forms of taxation. Never have we lost sight of the peculiarly direct responsibility devolving upon us for a frequent and frank accounting to the general public, as well as to these earlier, but no less certain, beneficiaries of this great trust that has been placed under our charge.

## PUBLICITY.

We have consistently sought through the ever charitable medium of our generous southern California press, to advise the people, by means of a continuous and systematic newspaper campaign, using widely circulated articles of live news value, written from the viewpoint of those specially interested, and distributed with all possible consideration of newspaper ethics. We have sought to make this service timely, by seeking to diversify it among competing journals and by investing it with an individual flavor, giving due regard to style requirements where known. Such a course has unavoidably involved a very considerable increase in the purely physical part of the work; but we believe the general appreciation shown has more than justified it.

Today, we believe it can truly be said that the public of southern California is not only virtually unanimously behind the conservation of fish and game, but also that it has a better working idea of operating problems and difficulties, and is in closer sympathy with our efforts than ever heretofore.

## LAW ENFORCEMENT.

In a work the success of which must be measured by the degree of cooperation attained on the part of the people who first must be awakened from their normal apathetic view to the realization of the value of conservation, the importance of such results is easier to underestimate or to ignore than to embody in cold figures. However, the statistical proof is not lacking. It is to be found in the steadily increasing percentage of convictions to prosecutions, and in the materially mounting average penalty per conviction.

When, from a percentage of 90.8, the convictions in one year jump to 96.4; and the average fine ascends from \$33.53 to \$36.51; with the number of convictions rising from 109 in 1919 to 136 in 1920, supported by fines of \$3,252.50 in 1919 swelling in one year to \$4,966, there appears considerable tabulated food for thought. If these figures do not reflect a stiffening of public sentiment in favor of strict enforcement of the conservation laws, what then shall be said at the almost doubled totals of days of jail sentence imposed last year as compared with the twelvemonth preceding? The figures were 245 days against 480 up to June 30, 1920. Likewise, the total number of prosecutions increased from 120, in 1919, to 141, in 1920, despite very satisfactory evidence that the laws are being respected more generally than ever before.

Had statistics been founded sufficiently early to show the increase in popular cooperation as expressed in information written, telephoned or given by personal call, the figures would undoubtedly have shown an even more sensational gain. Establishing the rule that no such call should ever fail to receive the promptest and most painstaking attention, it has become possible to build up a very considerable volunteer intelligence service which is steadily extending over the country, and proving of the very greatest value in putting a practical point to patrol work by focussing attention upon centers of violation. In a territory so comprehensive as southern California, and one whose fishing waters and game-fields are so widely separated, something of this sort is an essential preliminary to effective accomplishment. With an area larger than many states, yet containing seldom more than one regular appointee in any one county, nevertheless, the law-abiding sportsman insists upon seeing the fish and game laws enforced far more extensively—and intensively—than the ordinances of his own city where a hundred times as many specially trained patrolmen are inadequate to prevent nearly every law on the statute books being broken repeatedly every day. Nevertheless, there is but one course open, and that is to bring up the service to the utmost efficiency possible under the controlling conditions. This is being done, and nothing is overlooked that may tend toward further enlisting that public confidence which manifests itself most practically in the form of whole-souled volunteer cooperation.

There was a time when deserving volunteers, desirous of aiding directly the enforcement of fish and game conservation laws, could be specially deputized; but all such unsalaried help has now become impossible owing to the Employers' Liability acts which are construed as placing a fair charge against the conservation funds for any injury that might befall even an unsalaried officer, if operating under authority conferred by this Commission. Since no man can waive the rights of his heirs in him, the numerous applicants for special badges have been

enlisted, so far as possible, as informants and cooperators in such other lines as were possible, although a considerable part cannot understand just why the state cannot take a sporting chance upon their services toward the conservation of sport.

Likewise, were it possible to keep an accurate record of requests for information coming along the various avenues of inquiry—mails, telephones, calls at the office—the percentage of increase would be found to have approximately doubled each year. While in great measure such increases may be due to the establishment of a comprehensive and accurate "Sportsman's Information Bureau" as an adjunct of its general work, the explanation is in part found in the steady widening out of the Fish and Game Commission's activities; and to a natural following up of the very great annual increases in the numbers of hunters and anglers licensed.

#### LICENSE SALES.

Most public service bodies are charged with the expenditure of moneys turned over to them from the general tax funds on a pre-arranged basis which admits of budgeting expenditures, and arranging outlays in advance. The Fish and Game Commission happens to be numbered among those which must support their own efforts by a direct taxation of the more immediately benefited class; and for many years past, conservation has in no sense been a charge upon the general tax funds of the state. Surely, in a state whose phenomenal growth stands as a monument to the pulling power of her manifold attractions, no extended elaboration of the argument is necessary; and it is needless, for the sportsmen of southern California have most nobly proved, not only that they can, but that they most heartily will, pay the costs of propagating and protecting fish and game. Nor do they ask more than that their moneys shall be expended as intelligently and as effectively as a board of business men, backed by the ablest experts in their several lines obtainable, shall direct. With the collection of those moneys, the average sportsman has little concern; but since the financing of conservation work is its very foundation, the Fish and Game Commission must needs give the utmost consideration to increasing its revenues by greater placing of licenses, since each brings in the single dollar income that was established when a dollar did double duty as compared with today.

To the end that the public might more easily procure licenses, and revenues be increased by a larger volume of sales, Commissioner M. J. Connell, who has charge of this Southern Division, recommended, and after considerable effort, secured a law which permits the Commission to issue—not to sell—any number of licenses to any selected agent, to exact a bond, or cash-deposit equal in value to the amount of the licenses

so issued, and to allow agents so selling licenses, the legal commission of ten per cent.

In conformity with this law, innumerable such agencies have been created, sporting-goods stores, hardware and general merchandise houses and post offices among others. In addition to this already comprehensive distribution, the Automobile Club of Southern California has now placed our licenses on sale to its 50,000 members through its main office in Los Angeles, and its twenty branches in all the leading cities of southern California. The Automobile club not only has co-operated most cheerfully in every way through dissemination of information through the wide and highly specialized sporting circulation of its "Touring Topics" magazine; but has with most commendable public spirit, waived its lawful commission of ten per cent on the large volume of licenses sold, thereby establishing a laudable precedent.

Today, the hunting and angling licenses are so easily obtainable in southern California that nobody has the least excuse to be without. The requirements of the law are so universally known, and so conveniently complied with that convictions for lack of licenses are now negligible.

It is particularly gratifying that the gain in our revenues through thus conveniencing the public, has been attained without the loss of a dollar, or any dereliction in accounting, notwithstanding the broadcast nature of the distribution. The system is now so organized that a loss is virtually impossible, the Fish and Game Commission being entirely safe-guarded in advance, placing the entire responsibility right where it belongs—namely, upon those who are being paid ten per cent for their services to the state. Nor can the very large number of firms thus financially interested, be overlooked as a contributing factor in stimulating the sale of sporting licenses. These merchants are not overpaid for their time and trouble; but their profit comes in the very considerable advertising value incidental to the issuance of licenses, which bring people into their places of business to leave many a dollar in trade that otherwise would go elsewhere. Today, a more loyal or conscientious organization than these sales agents would be difficult to discover.

The story of conservation in southern California reads like a romance; nor has the last biennial period proved its least interesting chapter. Rather, the reverse is true.

Confronted by a combination of conditions seemingly prohibitive fifteen years ago—with a population increasing beyond any known precedent and agriculture ever reaching out for all arable lands, as intensive machine farming methods increased human capacity for cultivation—there seemed but a dismal future for the gentleman's field sports of angling and shooting.

Handicapped by a scanty legislative appropriation that was hopelessly inadequate, no one dared hope to ever finance conservation work upon a scale adequate to handle the magnitude of the job, that even then had made itself manifest to those whose lives are devoted to this public service.

The hunting license was then a new, untried thing; its possibilities problematical, so much so that Senator H. M. Willis, himself a southern Californian, sensing something of the local need proposed and indeed did, for a time, succeed in limiting the use of revenues thereunder arising to the introduction and propagation of alien species of game. From that early day to this, when conservation no longer asks support from the general public, is indeed a far cry. But now that the sportsmen have, through an enlightened popular sentiment, come to consider their hunting and angling license investments as virtually a contribution to the general good of game and fish, there has been a steady increase year by year, not only from immigration, but internally as well.

#### GAME CONDITIONS.

Some years after the establishment of the hunting license the Fish and Game Commission concluded, somewhat hastily, that propagation of game birds and introduction of alien species did not pay. It was then felt that careful conservation of indigenous species was more productive than experimenting with exotics. Whether that conclusion was entirely sound has for some time appeared debatable. Increasing cultivation involved changing conditions for game, development of water, and different crops. But of all developments questioning that conclusion, nothing could have a more unsettling effect than the phenomenal success attendant upon the artificial propagation and introduction of Chinese pheasants in the Owens Valley of Inyo County. This alone is unquestionably worth every penny this state ever spent upon the propagation of game. To such extended range and in such considerable numbers have these traditional game birds of royalty increased that a short open season with low bag limits is only a matter of time, meaning thus the actual addition of these magnificent fowl to the already long list of California's game. Today, a hundred of them may be seen in driving through the extent of their range in Owens Valley from the salt lake to the foot of Long Valley, delighting the motor tourist with their gorgeous display of coloring as they strut about the stubble fields and run or fly across the road, quite tame, usually in pairs, but often in considerable family parties.

At present, a plan made eight years ago by Commissioner Connell for sending a well equipped expedition into southern and southeastern Mexico in quest of the Grayson bob-white is held in abeyance await-

ing sufficient settlement of internal troubles in that revolution-rent republic. It is proposed to make the final arrangements as soon as such order is restored that such a mission will not imperil those delegated to so important a service. In the meantime, investigation of the living conditions and habits of these quail has progressed far enough to give every reasonable assurance that they are desirable from the sportsman's point of view, as well as promising to succeed in southern California because of the similarity in climatic conditions with their present habitat. No less an authority than Edward W. Nelson, Chief of the Biological Survey, has advised the California Fish and Game Commission to that effect, which brings probably the ablest judgment in the world to this question.

Among the problems of those who seek to protect and increase game, in southern California particularly, one of the foremost is the maintenance of suitable natural conditions that will encourage the residence, and particularly the breeding of our indigenous game. Without this, there is no foundation upon which to build in its behalf. Settling up of the country unavoidably means turning tillable land beneath the plow; and the subdivision of the large land-holdings of but yesterday is bound to bring a continuing menace to the maintenance of the game. Smaller owners are almost certain to cultivate more intensively, where the big proprietors left large ranges for stock, crops nowadays are going in, often but not always to the deprivation of the sportsman of his most desirable upland "happy hunting grounds." There is some comfort in the knowledge that many crops add something to the food supply of game; but none can deny the curtailment in breeding grounds, notably of quail, in the more thickly settled areas.

In various ways the conservation authorities have sought to meet this issue in the south following the general state plan. Previous legislatures provided the necessary enabling acts preliminary to the setting aside of suitable areas for the natural propagation of game. In the aggregate, millions of acres in the national forests have thus been reserved in the form of game refuges. These, under the Districting Act, must each be created separately and in a definite numerical rotation even as the larger Fish and Game Districts, which were dictated by the desire to harmonize open seasons with the wide variance in breeding habits incidental to California's continental climatic range.

The game refuges of southern California were altered somewhat both as to boundaries and as to regulations by the last legislature, the aim being to render them as efficient as possible. Anti-vermin campaigns were conducted in some of them, with very material results, not only directly in the decrease of predatory vermin but to the very evident benefit of the game therein. While the area of the Angeles

Forest refuges in particular is so great as to be unwieldy and virtually impossible to patrol efficiently, the forest rangers have cooperated toward this end more generally during the biennial period than ever before. As a result of a number of rather unusually favorable conditions, it may now be said that the withdrawal of these vast areas from the sportsmen appears to have gained them more game than it has cost. Deer hunting has been more productive around the borders of these refuges than elsewhere, due to increased game overflowing into the adjacent country. The very material stimulus given to trapping by the unprecedentedly high prices of furs cannot be overlooked as a contributing factor. For years, sportsmen have urged energetic anti-vermin campaigns upon the part of the state conservation forces. Prior to the last legislature, the Fish and Game Commission entered upon an experiment to determine what could be expected from putting expert hunters into the refuges to thin out species predatory upon game. While the experiment was entirely successful, and gave good reason to believe that substantial results could be attained in that way, the "war prices" on furs relieved the conservation authorities of any greater responsibility along this line than that involved in licensing trappers and keeping a certain surveillance upon them. There are always a few who need watching, but in this matter, so far as the south is concerned, the exception appears to have proved the rule. One gang of trappers in the southern Sierra of Tulare County, after a systematic campaign wherein the southern patrol force united to collect and link up the evidence necessary to prove up the offense, paid some of the biggest fines ever collected in fish and game annals, for winter slaughter of deer. The job was successful in securing pleas of guilty, and a thoroughly outraged public sentiment still awaits the chief offender for further punishment, despite the large fine he paid.

No bounties within the state's power could possibly have so stimulated warfare upon predatory animals as the high prices of furs. Since virtually all the fur-bearing species are predaceous upon game, several being in fact so classed, the aggregate benefit to the mountain game supply of the state is enormous. Good figures for skunks and other small pelts have caused many a farmer's boy to turn his spare time into good service for the sportsman as well. While fur prices are on the decline now they are still high, and so many have formed the "trapping habit," so to speak, that there is good reason to hope for a continuance of this general campaign against the so-called "varmints" of the old time Nimrod. Remembering that these vermin work day and night the year through, without respect for season or bag limit, one cannot but feel considerably encouraged over the game outlook. Obviously, the logical way to meet the situation is to substitute man for the vermin-

ous factor in the natural equation. Nature strikes her balances inexorably, but by reduction of animal enemies more remains for the hunter.

### COMMERCIAL FISHERIES.

Development of the Commercial Fisheries of southern California has enforced paying of particular attention to problems of the industry in this end of the state, the Fish and Game Commission being forced to establish two branch offices in the great centers of the fishing and packing business at San Pedro and San Diego. Meanwhile, a steadily widening scale of scientific investigation has been carried on, financed by collections of class-taxes levied upon various phases of the fisheries. While always the major part of the revenue will come from licensing of market-fishermen at \$10 each, the privilege and poundage taxes upon preserving of fish add considerably; and the extensive patrol activities of the state's patrol launch suffice in considerable degree to finance themselves through fines collected. The inclusion of Santa Catalina Island in two districts one of which is rather narrowly limited to certain classes of net fishing, and the other and nearer entirely closed to commercial exploitation, has of course proved a most fruitful field for the state's patrol activities at sea. Unavoidably, during the busy summer canning season, when high prices for tuna and albacore place every possible premium upon getting the fish wherever they are to be found, the courts have been kept congested with the over-ambitious netmen. Encouraging prices have stimulated a large migration of purse seiners from the virtually depleted waters of the northern salmon ranges to southern California; and a long association with the uncertainties of the International Boundary in the Straits of Juan de Fuca appeared to have inspired a considerable percentage of these newcomers with a general contempt for all fish and game law.

Due to the carefully programmed methods devised for handling the always serious problem of regulating alien fishermen upon the sea, it has been possible during the last summer to inculcate a due and proper respect for the written law among these visitants, and whether they remain or return, the conservation authorities feel that there will be very much less trouble with them in the future. While some stiff fines were imposed, and a few verbal clashes were unavoidable, the ends of justice have been served without any violence upon either side. A policy of dignified firmness was outlined by the Commissioners in the attempt to do no one any injustice. On the one hand were the large packing interests clamoring for fish and ever more fish to pack who are backed by the enormously increased fleet of largest sized fishing boats equipped with the most extensive gear known. On the other

side stood the law bitterly attacked by able counsel as essentially "class legislation" in favor of wealthy sportsmen. With these differences of opinion, the conservation authorities steadfastly refused to have anything to do. Once a fish and game law is enacted in California, that removes the Fish and Game Commission from any duty or responsibility other than its enforcement. Bitterly criticised by both parties to this conflict piscatorial, blamed by the fishermen for its zeal, criticised by anglers for its alleged apathy, the fact remains that persistent prosecutions have been met by suspended sentences of late in the very strongholds of this latter criticism so the only logical conclusion must be that on the whole the situation has been fairly well met. Today, with the constitutionality of the disputed law upheld, its enforcement must rest with those justices whose sworn duty it is to properly penalize violators whom the state's patrolmen bring before them.

It has required no small amount of consideration to enable the conservation authorities to keep in touch with so rapidly changing a situation as the regulation of fisheries on the southern California coast alone during the past biennial period. Without discretionary power there has been no adequate manner of meeting emergencies of supply and demand, so the only possible course has been a policy of enforcement until necessary alterations in the laws could be made by the forthcoming legislature. Many measures initiated two years ago have completely vindicated themselves, others in the nature of things have unavoidably proved inadequate. So long as no arrangement exists to adjust regulation to immediate requirements, even in matters so transient and ever-changing as fish and game conditions, the conservation authorities will be compelled to attempt to fortell the developments of many months ahead.

This uncertainty has encouraged the Fish and Game Commission to enter upon what probably is the most extensive program of scientific research along fishery lines ever undertaken by any of the states. While the need is state-wide and the work has not been limited sectionally the phenomenal growth of the fish-packing industry has naturally focussed attention first upon southern problems, although these in a great measure have a relation and bearing upon the situation elsewhere.

The time already has arrived when the one boat charged with patrol and scientific research is hopelessly inadequate, there being enough demand in either line to occupy her entire available time. It is probable that eventually the excellent and seaworthy patrol-cruiser "Albacore" will be detailed to scientific work, and replaced with a faster, bigger craft for the regulation of fishermen. When built, the "Albacore" was superior to any, but the growth of the fisheries industry has been

by such leaps and bounds that today she is no more than abreast of the demands made upon her and within another biennial period, when swift refrigerating carriers are operating between the local distributing points and the source of probable future fresh fish supply in far southern waters, obviously something more will be essential. In seaworthiness, comfort, economy, endurance, the "Albacore" has done all that was expected of her, and could not be duplicated today at her original cost.

Numerous complications are injected into the regulation of California fisheries by the proximity of the virtually virgin west Mexican banks off the coast of Lower California. Political uncertainties below the line have rendered the fishing business in southern waters a species of "get there first" game, rather preventing the effective and intelligent exploitation of these enormous, perhaps inexhaustible fishery resources, which so well might be employed to allow certain of the locally depleted species to recuperate. Until something definite evolves out of the southern situation, Mexican fish will merely continue to be an indefinite, unsettling factor in the fresh fish business, occasionally glutting the market, again falling into monopolistic control, yielding but a small part of their potential possibilities. Competent observers consider the southern supply of fish as far in excess of what California's colder waters ever could show and general observations by the state's research experts go far to confirm that conjecture. Eventually this supply will certainly become available to California under modern and efficient refrigeration.

No section of the state has been so clamorous and exacting in its demands upon our piscicultural facilities as southern California. With her population mounting by unprecedented figures, it seems as if an abnormal proportion of the increase were anglers. While in measure such a condition might be construed as a testimonial to the efficacy of the Fish and Game Commission's consistent campaigns in advertising the south's sporting attractions, which find a ready ear with the large leisure class attracted here by climatic opportunities for year-round enjoyment of outdoor sports. Certainly the fact remains that fishing never was more popular anywhere than here.

#### ANGLING CONDITIONS.

Favored none too bountifully by Nature in the way of natural waters, the very scarcity of streams and lakes has brought by artificial means its own remedy. Growth of population and cultivation has enforced the conservation of water and its development wherever possible. The situation was appreciated in advance by those whose thoughts are shaped along the line of providing the people with healthful sport afield. From the very first, fish were planted in the reservoir lakes generally

with encouraging success. As a result, the angling attraction proves potent enough to finance further efforts.

The scanty streams of southern, steep gorge watersheds do not lend themselves to the natural maintenance of trout. Too much water, or too little, is the ever present menace. Many a stream is planted annually in the certainty that there can be but little natural propagation therein. The best trout lake in the extreme south, Big Bear, in the San Bernardino watershed, is now, and for some years past has been on an essentially artificially maintained basis. The natural spawning facilities in its short, steep creeks are under ordinary conditions virtually nil. At considerable expense, the Fishcultural Department has installed two hatcheries, with spawn-taking racks and has sent a crew of its most skilled men into Bear Valley every spring to gather such eggs as Nature offered, these were hatched in the local plants for distribution in the lake and streams of the range. Last spring, although facilities had been almost doubled the fall before, the egg-take followed the general rule in the state and fell off until not enough eggs were available to operate to full capacity, even though the turnoff was about that of the year before.

In measure, Big Bear Lake's great popularity as the "Tahoe of the south," so-called, has proved its undoing for mid-summer sport at the height of the season and the concentration of the water through several dry seasons has played a part. The number of adult fish seen every spring at the spawn-taking stations and out in the bays at the creek mouths has indicated an abundant supply. Fishing is always good enough to satisfy the most ardent fishermen both early and late in the season. The state's students of such conditions are of the opinion that a normal winter will restore the fishing to its former sustained excellence, its consistency being one of the most remarkable things about it in past years.

Realizing several years ago that southern California's demands could no longer be met by long shipments from the mother hatchery under Mount Shasta, Fish and Game Commissioner Connell set about searching for a site combining the necessary conditions of cold, pure water in certainty of supply, with accessibility to transportation and after long consideration, the eastern Sierra was selected as a site for the splendid Mount Whitney Hatchery, which today supplies the lower end of the state, as well as the enormous aggregate area of fishing waters within motor-truck and pack-train reach of its troughs.

Had it accomplished nothing remarkable beyond the successful rearing of the rare and delicate golden trout, the Mount Whitney Hatchery would have successfully established itself among the great fishcultural institutions of the world. But in addition to this hitherto

unprecedented accomplishment, the remarkably favorable waters of Oak Creek upon which this latest of trout hatcheries is situated, have set new records for the growing of all kinds of fry. Its site was chosen with the same realization of increasing future demands that has actuated the Fish and Game Commission in all its recent enterprises. With not a minute's prematurity in its forethought, the Commission set about building up the barren lakes of the Sierra as soon as the Mount Whitney Hatchery began to operate. Consequently, sportsmen have found fish teeming in many a lake that three years ago was barren. They have enjoyed the keenest of the fly-caster's sensations in battling with the wonderful golden trout in those high, crystal-clear lakes. To such an extent did the needs of the situation impress Commissioner M. J. Connell that he personally took charge of the distribution of the 600,000 odd golden trout reared in the Mount Whitney Hatchery from the "take" of eggs at Cottonwood Lakes this year, limiting the planting to specially selected and barren waters which henceforth are to be golden trout lakes and streams, thus providing an infinitely pleasing variety to the summer Sierran camper. Large federal motor-trucks lend a most businesslike air to the distribution of trout from the Mount Whitney Hatchery, but of course the actual planting is a laborious pack-train proposition, tedious and expensive at best.

FIG. 26. Mount Whitney Hatchery, showing newly improved grounds. Photograph by J. L. Von Blon.

Extensive improvements in the grounds at the Mount Whitney Hatchery have made it such a show-place that many visit it every week, making the short drive from the main Eastern Sierra Highway, and feel well repaid for the trip. Thanks to the cooperation of Park Superintendent John MacLaren of San Francisco, a particularly harmonious bit of landscaping has been consummated. The general effect is a natural park, the typical trees and plants of the region having been used. As one approaches through the great rough-stone gate, the view is entirely commensurate with the nobility and dignity of California,

FIG. 27. Fish pond and gardens at the Mount Whitney Hatchery. Photograph by J. L. Von Blon.

and in perfect keeping with the enduring character of the primeval Sierran surroundings. To have neglected this "finishing touch" upon a work so eminently successful in all its practical features would have been to stop short of attaining an accessible ideal. The sportsmen of southern California can well take a lasting pride in this, their most substantial and most tangible accomplishment.

A most encouraging measure of cooperation in all lines of conservation work has not failed to extend its influence to the actual physical work of planting the fish reared in the southern hatcheries, particularly over the past biennial period. Without such public interest and assistance, it would be impossible to distribute the output of the hatcheries

under existing financial conditions. Gradually, the Fisheultural Department has built up an elaborate system of employing and organizing this popular enthusiasm by turning it to a definite service. Many men are planting fish now who have been doing it in the same waters for many years. In San Bernardino County, the board of supervisors undertake the entire distribution, the resident deputy is in charge, and the work occupies the better part of two months, being done in an intensive manner. It has maintained sport at an attractive level despite what doubtless are the greatest demands which have ever been made by anglers upon any similar lakes and streams.

FIG. 28. Newly finished fishway built by Southern California Edison Company at Kern River plant No. 3. Built according to plans furnished by the Fish and Game Commission.

No consideration of fisheultural work in the south would be complete without a reference to the "people's fish"—the large-mouthed black-bass. Introduced into the north years ago, the lusty "bronze-back" thrived amazingly in the warm waters and congenial environment of the artificially established southern reservoirs. Today, business men can, and do, take nice catches of good sized bass right in the city limits of Los Angeles, enjoying sport in all the celebrated methods, casting the fly, using the short "plug-bait" rod or various natural baits. When it is considered that only a few years ago there were no bass in the south, and no prospect of any, their introduction identifies itself as something of an achievement in behalf of the sportsman-angler

Such ready accessibility is by no means the least of its charms and it holds a bright future as further flood control and reservoir projects materialize.

Such success has attended the introduction of bass in certain of the San Diego city water service reservoirs that a well warranted plea for an entire removal of the winter closed season upon these fish is being made to the present legislature by those who argue correctly that the fish are best for the table in winter and have so increased that in the present open season the anglers cannot hold their numbers within the limits of desirability.

The efforts with game have not been relaxed during the biennial period. By stricter legislation and by steadily increasing the measures toward enforcement of law, the state has been building its best against the certainty of increases in demand each year. Propagation of game is to be reinforced by wholesale importation as soon as the experimental work has demonstrated the right species with which to win.

Nor have the activities of the California conservation commissioners been comprised entirely by limitations of sportsmen. Rather, the aim has been to stimulate field-sports, to encourage a wider use of our wild life resources by a greater number of outdoor exploiters every succeeding season. In every practical way, this object has been advanced. Information has been distributed broadcast through all available channels, and always hand in hand with the most direct aims of conservation that there may be more fish for which to angle and more game to hunt.

Last summer, after several conferences with leading sportsmen and business men of the Owens Valley, where the attraction value of fish and game are appreciated at par, Commissioner Connell succeeded in organizing a movement for the building of a trail into the now virtually inaccessible "Sixty Lake Basin" above Mount Whitney Hatchery, in which wonderful wealth of previously barren waters, the Fish and Game Commission has planted and built up such a stock of trout, two miles above the sea, that until additional feed was introduced, the fish had increased beyond the capacity of those high lakes to fatten them. This last year, exploration parties found them in prime condition awaiting the flies of the sportsman. As a result—partly of the successful acclimatization of the fish, partly of the organization of local sentiment in favor of making this entirely new vacation ground easy of access another summer—an excellent trail is being surveyed. Thus, the present top-heavy demand of southern California sportsmen upon the Mono Sierra will be diversified by this virtually virgin counter attraction one hundred miles nearer the center of population.

Such linking up of all the otherwise diverging lines in behalf of a direct, straight-from-the-shoulder policy of encouraging, regulating and

controlling sporting enthusiasm along the course of greatest general benefit to the entire public, never losing sight of the main uses of fish and game as inducements toward the healthful, recreative outdoors is characteristic of the California policy of conservation, nowhere better or more earnestly exemplified or appreciated than in this Southern Division. It remains our hope, as it certainly is our object, that these efforts shall never be curtailed or narrowed in their striving for that goal. Always the idea of undeviating public service along the lines of the greatest general good to the people must remain the aim.

Respectfully submitted,

(Signed) EDWIN L. HEDDERLY,  
*Assistant.*

## SEIZURES OF FISH, GAME AND ILLEGALLY USED FISHING APPARATUS.

July 1, 1918, to June 30, 1920.

Rabbits (cottontail and brush)-----	149	
Quail-----	194	
Doves-----	37	
Wild pigeon-----	12	
Ducks-----	2,856	
Gray geese-----	17	
Sage hens-----	14	
Pheasants-----	2	
Shore birds-----	71	
Non-game birds-----	15	
Miscellaneous game-----	157	
Deer meat-----	4,059½	pounds
Deer hides and heads-----	39	
Beaver skins-----	4	
Mink skins-----	3	
Aigrettes-----	59	
*Illegally used fishing apparatus, nets, lines, etc.-----	73	
Salmon-----	17,338½	pounds
Trout-----	2,208	pounds
Striped bass-----	9,008	pounds
Black bass-----	56½	pounds
Halibut-----	22,812½	pounds
Barracuda-----	8,136	pounds
Catfish-----	278	pounds
Yellow fin croaker-----	23,600	pounds
Sturgeon-----	249½	pounds
Miscellaneous fish-----	63	pounds
Abalones-----	2,727	
Abalones (dried)-----	1,157	pounds
Abalones (canned)-----	150	cases
Crabs-----	4,884	
Lobsters-----	7,153	
Lobsters (dried)-----	131	pounds
Clams (Pismo)-----	4,811	
Clams (cockle)-----	3,692	pounds
Dried shrimps and shells-----	5,700	pounds

\*73 nets, lines, etc., represent about 3,697 fathoms or 22,182 feet.

Illegally used fishing apparatus, after condemnation in superior courts, is destroyed or sold by the board in accordance with law. All wholesome fish and game is donated to public and charitable institutions, from whom many grateful letters of acknowledgment have been received.

During the period from July 1, 1918, to June 30, 1920, 67 searches for illegal fish and game were made by deputies.
